[Snip]

Radio Luxembourg on 208 metres was difficlut to tune in [fadin at night time]
but, in the late 50's v. early 60's was the only station in Europe carrying
lots of rock'n'roll.

Some makers produced models specially oriented to receiving Luxy.

Sounds as if yours is one.

Martin

Naw, this one had them all lit all the time. The filament load alone must have been impressive. They kept adding tubes in parallel until all you needed was a decoupling capacitor to the antenna (or I guess we'd better have a LP filter) and a HEAVY current plate choke. No tuning was necessary, just like the transistor amps....(c;

Larry....How do you explain to the wife you need 3 cases of 6JB6's?

Howdy!

Thanks for the recognition! As your largest trading partner and closest ally in the defence of North America, your comments are appreciated.

I took the time to follow quite a few of the links for the Camp X sites, and it was a few minutes well spent. The "man Called Intrepid" William Stevenson, was born in Winnipeg, Manitoba and there is a section of The Commonwealth Society here which honours him regularly. By the way, "honours" IS spelt correctly....we use an interesting combination of British English and American English in our Canadian lexicon.

All the best for now.

Are there any special event stations operating today to
commemorate the opening of the movie 'Frequency'?

The EARC (Emergency Amateur Radio Club) in Honolulu, HI will
be
operating today (Saturday) on 15m and 10m, 21.250, 21.350,
and
28.450 from 2200Z to 0600Z (Sunday).

It's the best move you've made of recent Lloyd.

Might I suggest some constructive alternates
to ham radio?

1) Sailing
2) Travel
3) Vintage Auto shows
4) Beach + swimsuits + binoculars (grin)

I find great satisfaction in all and endorse them fully.

Wish I had jumped into this thread earlier, could respond to Barry directly.

Yep, it's redundant, and the chance of total failure is nearly nil.
EXCEPT.....
I , too, "...work for one of the four largest telecom companies in the U.S."
So far in the last six months:

1.)We lost the trunk from one of our "big" C.O.'s to an outlying area. The subscribers in the LE (Somerton)could talk to each other, but not to the rest of the world! Took 1.5 days to get glass and copper in to repair it.

2.) Same C.O.....first part of April, the RPU card in the "front end" of the switch (Nortel DMS100) took the big dump. Since we are "...one of the four largest telecomm(sic) companies in the U.S." and very centralized, the CO techs aren't allowed to program subscriber lines; and, with the card DOA (Yuma's not "big enough" to warrant spares), neither could the programmers in Portland! 3 days without any new connects; and any repairs that required OE reprogramming - we've got a TON of IPG and SLC-96 lines out here -were also out of luck. Now, this is a small CO by our company's standards (only 5 prefixes), but it covers about 250 sq. miles, including one of the largest Marine Air Bases in the country, besides trunking to the aforementioned "little" CO and our larger cellular service. Now, what would happen if the whole switch died? Or what about our "Main" switch - 9 prefixes and microwave to an Army base and yet another "small" SLC96 based exchange, well as most of our city and county EMS/Law enforcement?

Thankfully, we've got a very active ACS in Yuma County.

Hey! That WOULD be fun. Run HF right from the lobby!......

With all the electronic controls on modern automated projection
systems I can imagine what the RF would do to the movie....(c;

And, I can imagine what that big Xenon arc light with the RF starter
will do to the ham radio....hee hee..

Maybe we can operate from the other side of the parking lot,
though....(c;

Do you know of a deserving youth Amateur Radio who could be a candidate for the 2000 Newsline Young Ham of the Year Award? This bit of information is for you. Please spread the word to all Amateur Radio operators and Amateur Radio clubs you know, and consider nominating that young individual who has contributed to the betterment of Amateur Radio. Nomination Deadline: MAY 30, 2000

The nominating period for 2000 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details.) Any continental United States (48 contiguous states) FCC licensed Amateur Radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted BEFORE May 30, 2000 on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the 2000 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download from our website at http://www.arnewsline.org. With continued corporate sponsorship, the award presentation is scheduled take place this summer at the 1999 Huntsville Hamfest. The Huntsville Hamfest, Chaired by Mr. Scotty Neustadter, W4WW, is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracting some 7000 attendees.

I have come across an old Collins SM-2 microphone (no stand, no
cable) in good condition. However, I don't have a way to test it.

Q: What are the signals on the 4 (four) pins on the mic?
(please forgive me, but I'm unfamiliar with this configuration. I'm
used to seeing a 3 pin switchcraft type of connector.)

Q: What would be a fair value for this (assuming it, in fact, even works)?

Many thanks.

Hello!!
I have a web page dedicated to the radio hobby here in Tampa Bay Florida. I am in the process of launching a new audio chat network on a channel for amateur radio enthusiasts. The idea is for webmasters to put the small html code somwhere on their amateur radio web page which would be linked all together worldwide. The system utilizes the new HearMe plugin which is a small 80k or so program new visitors of the amateur radio audio chat would download upon landing on the page which has the html code for the plugin. Please let me know if you decide to use the system so I can add your site to my links page to let others know your site is connected to the network. For a demonstration of the system you may email me for a time and date so you can see it in action. To get the html code please visit my web site below. To get further info on the HearMe requirments to have it work click on the help are for Hear Me on my web site. I am in no way affiliated with HearMe and my web site is a noncomercial page.You may also visit my radio page at the url below from 7pm to 8pm eastern time every day I try to be in my scanner audio chat at that time. I look forward to hearing from.
Thankyou
Best Regards
Tim Breckon--

3154. Mobile RFI in Jeep Grand Cherokees...

Newsgroup: rec.radio.amateur.misc
Date: 2000-04-30 00:00:00 UTC
From: Ron Klein <ronklein@ix.netcom.com>
Message-ID: <87mpgs0tvjrorr3jgvq22a7r30ljvif801@4ax.com>
Source record: 112144

I'm considering buying a 2000 Grand Cherokee Laredo and would want to
install a VHF/UHF transceiver in it, as I have my existing
'98 Cherokee. I'd expect to use my Icom 207 dual bander with a dual
band mag mount antenna on the roof

Is there anybody that may have 2 meter/ 440 transceivers
installed in 1999 or 2000 Grand Cherokees who watch this newsgroup?

I'd like to be sure there aren't reported problems with EMI/RFI in the
Grand...

Comments, anyone?

Ron - W0OSK

Others were right when they said practice, practice, practice, but you need to be careful not to overdo it. But it's best to keep at it, every day, but 15 minutes a day will do it. Don't try sitting for more than a half-hour. If you feel that you need more work, maybe 15 minutes twice a day, but keep the sessions short.

The W1AW code practice isn't bad, and there's bound to be one band where you can receive it reliably. Sure, at first you'll only get an occasional letter, but just do the 5WPM practice every night (it's only a 5-10 minute piece) and in a month you'll be confident to take the test.

Jeffrey Herman,

Now that I've hit the wrong button, posting a fragment, let me continue.

During a demonstration in downtown Miami, pro-Castro Unitarians were stoned. So much for our First Amendment, alien to the Cuban mentality if you don't agree with them.

To get to the bottom of all the fiery emotion, yesterday I checked out "Fidel; A Critical Portrait" by Tad Szulc, Morrow & Company, New York (1986). A 700 page book, it has already revealed to me one of the reasons behind the hysteria.

You see, Castro expressly condones his own lieing, explaining that historic justification vitiates truth when need be. It's the old notion of "manifest destiny," or Castro's rules of order interpreted by Castro. Typical of messianic leaders, Castro views himself as the ultimate futurist and savior of the third world. He sees Christianity as a potential ally, which might explain the Pope's visit.

Of course, he acts on his beliefs, going as far as sparing the lives of would-be assassins who fought beside him in the revolution. He did indeed hide his Communist leanings because he didn't think the nation would buy such radical "reforms" until he could consolidate power.

There are those who love him and those who hate him. Peasants near the Escambray Mountains, where the revolution took root, remember that Castro and his band helped them harvest their crops. The refugees here know only betrayal, perfidy that makes Batista's criminal connections look like child's play.

And so you have an irresistible force in Havana meeting the immovable Hispanic community here in Miami. There is no compromise. Many of the revolutionaries who fought with him still support him. Occupying cushy, government posts may explain their support, or it could be sincere without the patronage.

According to our scheme of ethics, he cannot be trusted. How can we put our trust in someone who has expressly announced his propensity to lie if historically justified? By reserving the final judgement in all cases, Castro is essentially staking a claim on being virtually God-like,

Bob Sherin, W4ASX
Miami, Florida

> Continue the fight, instigate, stir the pot kevin, show us what your all about
> OK?

Actually, the cartoon (at http://www.3950.net) is harmless fun; and
it deflates the pomposity of a few self-styled "moral crusaders" in
the process.

I do note that your "outrage" was notably absent when certain other
(pro-jammer) webmasters, including yourself, were making obscenely
defamatory and utterly false allegations about child abuse and
family deaths of legitimate 3950 participants.

The fact that the patriot folks can respond with good humor and
light-hearted fun to the most scurrilous attacks imaginable from the
BLB/KJI/MVK axis does, indeed, tell the reader volumes about the
starkly contrasting respective breeding and civility of the two
sides involved.

With all good wishes,

--

Kevin Alfred Strom.

>accurate label. Having a ham license but committing federal offenses
>on 11m doesn't necessarily make one an "amateur radio operator."
>One of his offenses was operating *between* designated CB channels.
>That's not "out-of-band."

Agreed. But my point was that he was a licensed amateur radio operator. As such, he certainly understood his actions were illegal and also understood the potential consequences of his illegal operation, more so than would the average CB'er. In my mind, this makes his actions more contemptable than if he were merely an unlicensed CB'er.

Apparently the FCC saw it this way also. I doubt he would have been fined $17K if he were just a common outband CB'er.

Good call by the FCC.

You're mixing up news reporting and commentary. News reporting is more what you see on the front page of the typical newspaper - hard facts without much opinion.

And you can still see some of this type of reporting on television during the hourly newscasts. However the discussion shows are not hardcore news reporting - they are pure commentary (the opinions of the host or station/network).

Commentary by news journalist is not new - it has been going on for hundreds of years (just look at some of the early newspapers in this country).

There hasn't been "individual" news gathering in many years. All of the news programs rely on similar sources, or even the same source in many instances.

That is exactly the same as you see with the written press - most rely on the AP for their news articles. Therefore, it is hardly surprising to see many newspapers across the country with exactly the same (word-for-word) lead story on the front page - they all got it from the same source (along with most of the other articles in the paper).

I don't know why you would consider this suspicious, especially since it has been going on for so many years (and is widely known).

And lets face it - this is the only thing that can work in a large society. My god, there is already enough news people hanging around the major news stories as it is. Could you imagine what would happen if there were news crews there from every newspaper, every television station, and every network, in this country? I don't think any city in this country could deal with the resulting chaos.

It was 1965 that I decided that, someday, I'd get my ham license.
That was after visiting the shack of a now-silent key, W2IPR
Thirty-five years later, in February 2000, I obtained my no-code
Technician license.
I've had my no-code tech license only 2 months. On Monday,
I'm taking the written test for both General and Extra. I expect
to pass the exams with a score of 85 or better.

Unfortunately, after I pass the exams, I'll still be a Technician,
since I don't know the code.

What's the best way to learn the code?

Not so. Even the papers are offering a slant to their reportage,
pursuant
to the politics of the editor, publisher, or reporter. Reportage
as you de
scribe hadn't happened years. But has been replaced by commentary
and spin masquerading as reportage for years.

> And you can still see some of this type of reporting on television
> during the hourly newscasts.

That's my point. Not so. Rather's political position and his
influence on the writing are well known. Brokaw's threats to
walk off the NBC news if the Juanita Broaderrick story was
broadcast, are almost legendary. The suppression of stories has
become something of a recent SOP of late, and is a direct assault
to teh concept of unbiased journalism.

> the discussion shows are not
> hardcore news reporting - they are pure commentary (the opinions of the
> host or station/network).

Which is why I do not include them in this discussion. I refer to
what masquerades as hard news. It's not. It's just as biased by the
people who write, edit and anchor the news as content of the chat
shows.

Further, the lack of followup and the inclination to take
'official' sources at their face, shows a lack of journalistic
initiative, that the opportunistic exploit to their political
advantage.
>
> Commentary by news journalist is not new - it has been going on for
> hundreds of years (just look at some of the early newspapers in this country).

True enough. But recently the opinion expressed has drifted often
to that of the person providing the 'official' story. With little or
no investigation, often even corroboration. Hundreds of years ago,
the papers reported what was told to them as well as what they could
find through their own sources. In the particular case of hte
Gonzales affair, it is a suspiciou coincidence that the three
network anchors tell not only the same story, but use the same
language. It indicates a lack of initiative to find additional or
alternative information, is as much propaganda as the White House
Press office.

Which is exactly my point. When News relies on a single source,
manipulation of the information, and the public opinion is possible.
And THAT in a Free Society, is something to be alarmed about.
>
> That is exactly the same as you see with the written press - most rely

You confuse same story reportage with same language presentation.
Even individuals reading the same story have different
understandings of the story. Taht would lead to different
presentation, pursuant to the varying writing talents of the script
writers, and the varying interpretations of editors. And yet, the
language is curiously the same. That should raise suspicions.

>
> And lets face it - this is the only thing that can work in a large

> this country could deal with the resulting chaos.

Pooled sources are nothing new, as you point out. And pooled
sources do in fact, produce efficiencies. However, covering a speech
or a live event is one thing. Uncovering facts after an event is
something else. Uncovering facts after an event has taken place is
subject to individual variations, of viewpoint, language,
presentation. That three bloodthirtily competitive networks agree
not only on the facts of the case, but present it in the same
language indicates that there is some steps in the reportage, some
steps in the watchdog media's vigilance, that are not happening.

That's suspicious.

Try out Morse Academy. It is a freeware program that can found at ah0o.org.
It is a DOS based program that has a TON of features for learning the code. It
was the best I found for practice and learning the code. I had a difficult
time learnig code and this prgram was a great help. Nice thing about this
Program is there is no fluff ie no talking cats ect...
Also check out you local clubs for classes. Here locally several clubs
offer classes on code and the varios licenses.

I saw that God forsaken flick last night and it's "awfuller" than awful. How bad? Riley Hollingsworth ought to slap Dennis Quaid and his son with twenty grand fines for degrading amateur radio beyond anything any legitimate ham could do.

I'm talking bad, brother hamlets, really BAD! A mishmosh of a film in which the viewer isn't sure of what's in the present, past or future. An utterly ridiculous plot about a firefighter ham who died in a blaze in Oct.1969 just when the Mets were upsetting the Orioles in the World Series but who didn't die because his now grown son finds a beaten up Heathkit and QSOs this dead dad to tell him he was going to die in a blaze which Quaid then avoids by jumping out of the factory inferno into the Hudson or some other New York river.

The living son(no insult to "Brother" John" intended) is able to QSO his dead father thanks to an aurora borealis which is constantly seen lighting up the firmament framed against the structure of a beam. A viewer who's not a ham might buy this whole stupid concept but if one has a ticket and then watches how disgracefully the hobby/service is portrayed in the film, he'll e-mail rholling@fcc.gov/
It is shown to be way below that of CB; in fact, it borders on the days when we tied two tin cans together by string and Marconied it from one backyard to the other.

Some metaphysical films are outstanding, for example "GHOST" AND "IT'S A WONDERFUL LIFE." and even "Back to the Future." And I'm sure there are others based on the plot of how things in the past could be changed by communicating with persons in it and warning how to avoid calamities such as serial murders. The best part of the entire 2 hours of hell are the flashback kinescopes of the '69 World Series since the shoepolish on the ball that hit Cleon Jones's foot is the KEY to the ridiculous ending of the whole thing. And why didn't the Heathkit have no cover? And by accentuating everything via two hams using no protocol whatsoever aside from Officer Tooties yelling, "Car 54 Where are You?" is sheer torture.

Good heavens bored viewers of this board-save your time and money. Do something more challenging and rewarding like taking a hot zitzbath to relieve your hemorrhoids.

Doc, AF2Y

Thanks Doc. As I expected the film is another "French Atlantic Affair".
Destined to be heartly heaved into the $1.98 for-a-5-day-rental at Apu's
House of Video and Dunkin Donuts.

By your movie review I do gather that it does reflect one truth
of ham radio aa it pretains to this film... Both are living in a
fantasy world.

Mr. Sherin, You have talked about the amplifier. I suspect that most
logical people would not reject my observation as being unfair.

--I, too, believe that Herb's "predicament" will be remedied--in his
favor.

>
> My posts deal with the aftermath of a criminal case where the

Fine and admirable. It IS an interesting story. But, you personally,
leading with "Ham without Contrition" is IMO a dangle, speaks of axes
grinding and is just not relevant. That was my point.

>
> Please, my friend, comprehend the difference between 1) the strategy of

> of grief later--and ham licenses too.

Agree. Obviously, an expression of contrition before a court or a jury is
usually viewed favorably. Why don't you convey that to Herb? Do you hope
to reach him through this NG? Aren't you his friend?

>
> Now comes the problem of what Herb should do, an enigma. I am now aware
> any ham who has a criminal case followed by an administrative FCC

> yourself for purposes of the criminal process.

I didn't know that. (Why didn't you lead your thread with that?)-- If what you say is true, its significance is deserving of a wider audience and more in-depth analysis than it will ever receive in this NG. I encourage you to make it so.

> I hope you can see the deeper meaning here, because this is not a matter
> of crime and punishment. It is a matter of being railroaded by

> valuable Constitutional rights stand between you and and the fate of
> your criminal case.

You've clarified for me information I read about the case in other places. Most won't/don't see the deeper meaning though and are happier, from what I've seen, just "bloodying up" Herb for their own reasons or ignoring the whole thing.

Look closer. The Cuban community can't afford that kind of negative
publicity. I watched some videos that WEREN'T on CNN or network TV
run by the liberals. The gentlemen I saw smashing windows weren't
Cubans. Cubans aren't black......if you get my drift.

Besides, most of them are still carrying green cards. Aliens guilty
of crimes are put in prison, without so much as a hearing, for years!
They loose the green card, and might be SENT BACK, TOO! That holds
the ones with any brains from looting and rioting. Considering the
heavy handed idiocy of the snatch, I think they are very well behaved.

What's really too bad is he can't copy the ship traffic to WCC or WOM, any more. I learned the basic code when I was 10 and became more interested in getting my code speed up so I could copy the ship traffic of the day than I was in ham radio. I almost flunked the Novice code test because they were not using Farnsworth and it was too slow.....

Larry W4CSC....sorry you missed the old days, but I'm anti code now as its day has passed.

Practice is the ONLY way you'll pass it.

One of the oldest hams in SC, Linwood N4LS, holds code classes on 2m FM through one of the repeaters so everyone can hear a few times a year. Maybe you and some of your buds on 2m should mic a few code practice oscillators to the FM rigs and get everyone up to 5wpm for the test! It's LOTS better if you're actually copying it for a reason. Get a little code program for your computer off qrz.com or someplace and use the computer to generate perfect code for the group. Code funny stories to make copying interesting. Send the club's newsletter, if you have one. Send the front page of the newspaper if you don't. That way, after the sender has sent an article, everyone can just look at the front page of their newspaper to check their text for accuracy...or the club bulletin. It reduces the checking-on-the-air time to zero.

Best of luck on your upgrades. Get a bunch of guys/gals together on 2m and you'll all be generals and extras in no time.

Larry W4CSC....

I heard the same thing. The plot is, this demented, paranoid,Jewish dentist from a state close to New York, loses his license to practice. He gets on amateur radio and imagines he hears voices persecuting him and his religion. To get away from the voices, he starts going to cheap second run theatres and imagines himself to be a latter day Siskel and Ebert. He gives reviews on a obscure amateur radio forum (not asked for). These prove to be very unpopular. He rants against the dumb ignorant ones who do not like his reviews. He is finally committed to a mental hospital with a rubber bone secured between his teeth for his own protection. His last days are spent hollaring "Get Herbie, Get Herbie, he caused it all", His people turn against him and he expires in front of the camera to the delighted pleasure of the few nudnicks left who see the end of the movie..

What a Bummer!!

Greets to all;

I have a buddy with an Oskerblock 200B swr/wattmeter but he's lost the settings card for it. Would anyone with one be able to post a scan of it or email a scan to my email address?

Thanks for your time and efforts.

Garnet Moser

I have to second that. The News Director decides which stories are to be covered, and how. The reporter (who is hired by the ND and thus likely shares viewpoint) can slant a story simply in the choice of quotes, or even facial expression and tone of voice.

Consider a recent rally held on the steps of the Utah state capitol. Observers from nearby buildings mentioned having never seen so many attendees at any rally in years. One station reported "hundreds" in attendance, another said "over 500" while another said "1200 - 1400." All of those stations gave estimates which TECHNICALLY agreed with each other, but do you see how they guided opinion?

None reached the semi-official count of 2000+, but all stations covered the "counter-rally" -- which was composed of two women and a boy, off at one side, each of whom were intereviewed.

Now, contrast that with coverage of another rally (official count 250 - 275). One station said "as many as a thousand," another said "hundreds from across the state."

The counter-rally drew over half the number of the main rally, including at least 50 children. Coverage of the counter-rally was ten seconds of mixed video (showing both sets of signs together) and a mention that "there were a number of marchers" opposing the main rally.

I'll bet that just about anyone here can you tell me which was rally was held by a pro-abortion group, and which was held by Women Against Gun Control.

No, I don't think they are "wierdos/nut cases". Probably just a bunch of
normal ham radio operators that believe that sticking a penis into another
male's rectum is offensive and starting a ham radio club and celebrating
that abnormality as being even more offensive. But that's just a guess.

janssenqj,

Great dialogue, thank you.

Please be assured that my posting about the amplifier was a response to a post pointedly requesting recount of the episode. Otherwise it wouldn't have been put in the public domain. After it was revealed, I felt free to use it in any journalistic context.

The twists and turns of this thread is an educational process for me, the loftiest purpose of NGs. Had I started off knowing what I do now, the headline would have been different, of course.

Being unconnected from Herb, though I do hear from him occasionally, my posts on this subject are a continuation of the chilling criminal trial in 1992, where FBI and Secret Service fanned out following and bugging us. The FCC was also there but in a lesser role to testify about ham radio.

Observing the Odyssey, I've been driven to follow every detail, weighing in to make the public privy to my observations. (After all, QST won't report these facts.) It is a picture punctuated with intrigue, also one in which Herb has made mistakes. For me, those small mistakes have been especially grating because they detract from the deprivation of his 5th and 6th Amendment rights, his real cause.

A better catagory to place him in would be a CBer who happened to
have a ham license. Given his history on CB, that's a much more
accurate label. Having a ham license but committing federal offenses
on 11m doesn't necessarily make one an "amateur radio operator."

One of his offenses was operating *between* designated CB channels.
That's not "out-of-band."

> situation.

What Herb (apparently) did was a crime. Was it a bad thing? Yes. Should
he pay for it? Yes. But he shouldn't lose his Ham license IMO any more
than he should lose his fishing license or his Sam's Club card. Isn't he
still operating Commercial transmitter(s)? What's more significant?

>
> Witnessing the folly of the KV4FZ-type of blanket denial are the
> Watergate and Clinton matters, where minimal admissions and apologies
> would have remedied the situations before they got off the ground .

Really? To compare Herb's case with "Watergate and Clinton matters" is just
silly and is an attempt by you to elevate the issue to a higher and
different level of (off-topic) discussion.

I would note to you that except for an insulting, one line Electronic Rage
message I received from radiosigs@mindspring.com in my personal mailbox,
that my NS shows that no additonal comments were generated into this thread.
Your thread is dead; silence speaks volumes.

Very intersting film. Not meant to promote or glorify ham radio. Meant only as entertainment. It's a good thing it wasn't accurate on what goes on in ham radio, especially if it portrayed the hobby as it exists on 14.313. The place would have emptied out in the first 5 minute segment. I mean your popcorn would have been warm on the floor. On a scale of 4, I'm giving it a 3. w9Sox

As I am sure I will too, if/when I see it.

However, if I buy a ticket with expectations such as:
1) Deification of the HAM radio operator
2) Cold, unforgiving accuracy in filmmaking
3) The film being best viewed by closed-minded viewers
4) 'Reality' and 'Hollywood' in the same sentence
5) Everybody leaving the theater noticing my Amateur Radio tags
on my vehicle, and rushing up to meet a "RealHAM"(TM)

Then I am sure I would agree with post #1 in this thread.

But I don't and won't, so I am sure the movie will be enjoyable.

Glad you liked it.

> to the politics of the editor, publisher,
> or reporter.

And, slanting the news reporting has been going on for humdreds of years (I'm sure Ben didn't exactly give the Redcoats unbiased coverage in his newspaper). And as long as there is a wide selection of news sources (insuring a wider spectrum of bias), this free enterprise system of news reporting works.

However, in the last few dozen years, we have seen the consolidation of newspapers, magazines, tv networks, and tv stations, under fewer and fewer owners.

For example, my newspaper in South Carolina is owned by a group that also owns a newspaper in Chicago (and a few hundred other newspapers around the country). Now, obviously that newspaper staff cannot truly present news in a manner that is totally consitent with the opinions and values of the local population.

Sadly, I can say exactly the same thing for the cable tv company - also owned by a company based in Chicago. That company in Chicago picks which cable channels are offered, and it is out of step with the local population (the population here is mostly white, for example, while the programming is heavily weighted towards black viewers).

So, in the end, if you want more coverage of diverse opinion, you really need to look for ways to break up the news monopoly in most cities (give the viewers more than one cable company to choose from, break up the publishing giants, etc).

By the way, does anyone know how we ended up with only one cable tv company, one phone company, one electric company, and so forth? Who decided it was a good idea to divide the cities into chunks with one each of these companies in control of the population in that area (mini monopolies)? And who decided on the exact areas these companies control? For that matter, how was it decided (back room deals)?

HI,

I'll be visiting the Tulsa / Taft Oklahoma area this June. Anyone
have any frequencies to share? Like which are the major 2 meter and
440 repeaters.
any weather frequencies? plus other scanning type freqs?

Thanks in advance

Well, quoting out of context, certainly doesnt' help, either.
What I have pointed out now three times, and you're still failing to
address, is that there is a uniformity in teh presentation of big
three, and numbers of the smaller news outlets, that should be
alarming. When have you known so many different individuals, so many
competitors, to speak with one voice? Using the same language? And
more importantly take a single source for their story?

I"m not talking about a pool feed, or AP, and Reuters. There is a
significant difference between taking a common story feed from a
group of news professionals, even with their biases, and comparing
notes to gleen the truth, and taking the story, unsubstantiated,
from a party to the dispute in question, with no corroborating
information, other than, a common, 'well why should he lie?' Where
are the investigative reporters that bulldog their way into detailed
stories? Where are the muckrakers whose bylines grace every front
page? Why are they so suddenly, and totally silent? Why, with all
the reporting talent in this country, with such a rich history of
skepticism and dogged pursuit of detail, is the only information in
this second chapter in the saga, coming from Greg Craig? Why is no
one bothered by that?

I don't have an answer...Why is no one else asking the question?

Never before has the press in this country simply rolled over and
not only failed to ask Who, What, When, Where, Why, and How, but
actually defended the trickle of information from one side of the
dispute in question.

Why? And why is no one asking? That alone should be alarming.

-----BEGIN PGP SIGNED MESSAGE-----

I'm about ready to take the entry level tech exam and am pretty
confidant about passing ... still have a few glitches to learn
but should pass.

After I pass, I'd like to get a vanity call and honor my
silent key Grandfather who was in the hobby for years, but as
luck would have it my folks didn't keep a copy of his old
ticket.

I would appreciate it if anyone with an older callbook could
help out ... his name would be H. Douglas Seielstad Sr., and
probably would have a listing that expired in the late 70's or
early 80's, if you happen to have a listing, could you please
e-mail it, thank you.

14.313 (...and it's adjunct "frequencies") *ARE* entertainment.
It's ham radio style entertainment, although R.H. has put
the kabash on some of the more "bawdy" acts of recent.

> The place would have emptied out in the first
> 5 minute segment. I mean your popcorn would
> have been warm on the floor.

I would be inclined to doubt that. Comedy Central's "The Daily
Show" sould consider doing a spot about the historic 14.313
Booer Wars. They go all the way back to the Jim Jones incident
in 1978 which lit KV4FZ's fuse (..or lit the string on his
tampon - whichever you prefer) Just a shame that more tapes were
not made of the early days of KV4FZ, N5FX, WB4GDP, KA4MUJ, KA1SKV
NQ2C, NX0T and many many others... No doubt that you could have made
a "Best of .313" CD Boxed-set and sold them at hamfests.
My all time favorite was the "Lesbian Lovers Letter" that Mike
read on the air one night, allegedly came from the late Doris P.
of Newark NJ. I was *literally* rolling on the floor with tears in
my eyes an turning red from laughter, that fool in Ft. Liqurdale
actually thought it was genuine. Oy, I wish I'd have recored that one!

On a scale of 4, I'm giving it a 3. w9Sox

And there are witnesses from the scene, including those present during the 'snatch' who are claiming that what was reported by the Post just isn't true.

The interesting thing is that it was reported by the paper in Washington. Interesting also that it wasn't quoted from the paper in Miami. Which suggests, along with conflicting eyewitness accounts, the Post is quoting the Party Line.

Which is NOT to say that this is conclusive, or that there is a clear attempt to defraud the public.

What it does is raise significant questions. Questions that are NOT being asked by the media. THAT indicates that something is a foot.

Mrs. Gonzales, especially, looked like a commando-type to me. I think
I've heard her, disguised in English, on 3950, late at night. I

noticed all the women had on riot gear and flack jackets. Oh, excuse me, those were the social workers from child protection wearing the flack jackets.

Jeff, just for a different perspective than the infiltrated US media, where everything you see and hear are controlled from TelAviv, go to www.virtualtuner.com and use that site to find BBC World TV News and ITN News on Demand. You can watch either, any time. BBC is controlled, partially, by MI5, but ITN is not. UK news is a different place to get real information in our language. The slope of it, and it has a slope I know, is different. I watch ITN news daily. The Clinton Liberals don't own the UK press.

Go to this page;

www.qcwa.org

Then drop a e-mail to the general manager. Ask him for help in looking it up. Without a call it may be a problem. They do have lots of old callbooks.

You may also try dropping the FCC in Gettysburg a note if you have the approximate date he was licensed.

Good luck.

Dan/W4NTI

3242. WTT: My Icom R-8500-03 for your TM641/2 + cash

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-01 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <8ek5ps$1v0$1@news.enteract.com>
Source record: 112174
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,chi.forsale

Howdy! I have a near-mint (one scratch on the cabinet top) *unblocked* Icom R-8500 receiver I would like to trade for some other gear. This receiver covers 0.1 -1999 MHz, continuous, AM, FM, WFM, SSB, and CW. Too many features to list here, so see:

http://www.icomamerica.com/receivers/tabletop/ and click on R-8500 for complete details.

My radio includes the following extras:
o FL-52A 500 Hz CW filter
o RSR-8500 PC programming/control software
o Service manual

What I am looking for:

(1) Kenwood TM-641A or TM-642A with a 1.2 GHz module installed
(1) bunch of cash

-or-

(1) Kenwood TM-641A or TM-642A with a 1.2 GHz module installed
(1) Garmin StreetPilot GPS unit (color or not)
(1) little bit of cash

Any gear you're offering must be in perfect operational condition, and at least a cosmetic 8.5, complete with manual(s), power cord, mic, and mounting bracket.

I don't really want anything else, so please don't make any other offers.

The unit is located outside of Chicago.

Please drop me a note if you're interested,

Paul WD8DKY

A good communist is a dead communist and there's something wrong with our operatives who, in 41 years, were never able to take out that bearded bastard who tortured and murdered the opposition, nationalized our industries on the island without any form of compensation, sent troops to communize parts of Africa and the Caribbean and who allowed Russian nuclear missiles to be stationed on his soil to menace, blackmail and ultimately destroy our nation. To hell with Fidel and everyone associated with him! Viva Cuba democratica...Viva Cuba libre y muerte a Castro y la basura communista de el!

If "Frequency" stays in theatres for more than two weeks, I'll be surprised. Now let's take "Contact" for example. Sure, Jodie's hamming did have an important role but the basic story was so beautiful and the acting so inspiring, a ham viewer couldn't care less about the technical flaws. It was a grippping film from the outset. On the other hand, "Frequency" lacked any credibility whatsoever, was beset with constant flashbacks and fast forwards to the point of incredulity and annoynace, hampered by the worst acting possible, brazen technical flaws beyond belief and the preposterous and bungled handling of a good idea concerning how the present can change the past to change the present. What a mess!

Unfortunately, callbooks are just that...listing by call rather than
name.

If you've searched for even a scrap of paper that may have his call, try
the local ham club. There may still be a member who would know his
call.

Good luck

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr20_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr20_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr20_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

U.S. Newswire 1 May 12:22

Clinton Statement on Global Positioning System Accuracy

To: National Desk
Contact: White House Press Office, 202-456-2100

WASHINGTON, May 1 /U.S. Newswire/ -- The following was released today by the White House:

--
STATEMENT BY THE PRESIDENT REGARDING
THE UNITED STATES' DECISION TO STOP DEGRADING
GLOBAL POSITIONING SYSTEM ACCURACY
--

Today, I am pleased to announce that the United States will stop the intentional degradation of the Global Positioning System (GPS) signals available to the public beginning at midnight tonight. We call this degradation feature Selective Availability (SA). This will mean that civilian users of GPS will be able to pinpoint locations up to ten times more accurately than they do now. GPS is a dual-use, satellite-based system that provides accurate location and timing data to users worldwide. My March 1996 Presidential Decision Directive included in the goals for GPS to: "encourage acceptance and integration of GPS into peaceful civil, commercial and scientific applications worldwide; and to encourage private sector investment in and use of U.S. GPS technologies and services." To meet these goals, I committed the U.S. to discontinuing the use of SA by 2006 with an annual assessment of its continued use beginning this year.

The decision to discontinue SA is the latest measure in an on-going effort to make GPS more responsive to civil and commercial users worldwide. Last year, Vice President Gore announced our plans to modernize GPS by adding two new civilian signals to enhance the civil and commercial service. This initiative is on-track and the budget further advances modernization by incorporati ng some of the new features on up to 18 additional satellites that are already awaiting launch or are in production. We will continue to provide all of these capabilities to worldwide users free of charge.

My decision to discontinue SA was based upon a recommendation by the Secretary of Defense in coordination with the Departments of State, Transportation, Commerce, the Director of Central

Intelligence, and other Executive Branch Departments and Agencies. They realized that worldwide transportation safety, scientific, and commercial interests could best be served by discontinuation of SA. Along with our commitment to enhance GPS for peaceful applications, my administration is committed to preserving fully the military utility of GPS. The decision to discontinue SA is coupled with our continuing efforts to upgrade the military utility of our systems that use GPS, and is supported by threat assessments which conclude that setting SA to zero at this time would have minimal impact on national security. Additionally, we have demonstrated the capability to selectively deny GPS signals on a regional basis when our national security is threatened. This regional approach to denying navigation services is consistent with the 1996 plan to discontinue the degradation of civil and commercial GPS service globally through the SA technique.

Originally developed by the Department of Defense as a military system, GPS has become a global utility. It benefits users around the world in many different applications, including air, road, marine, and rail navigation, telecommunications, emergency response, oil exploration, mining, and many more. Civilian users will realize a dramatic improvement in GPS accuracy with the discontinuation of SA. For example, emergency teams responding to a cry for help can now determine what side of the highway they must respond to, thereby saving precious minutes. This increase in accuracy will allow new GPS applications to emerge and continue to enhance the lives of people around the world.

3252. Ham Radio Cost?

Newsgroup: rec.radio.amateur.misc

My husband wants to get into Ham Radio. (his grandfather was active in it many many years ago). I've been doing some research on it for him and have some questions I was hoping someone could help me with.

1. The ARRL website states that renewal licenses are free. I could not find anything on the cost of the first license. Does anyone know what the first license for the Novice and the Technician cost?

2. I saw several websites that said the test cost $5 to $6 and some that said the test are free. Has anyone taking any of the test recently that could tell me if you paid for them, which test you took and how much it cost?

Any help with these questions would be greatly appreciated.

Thank you,
Beckie

Speaking from my own experience, I passed my 5wpm and General Written exams
on March 26th and the Tech Plus Upgrade was posted on the FCC site on April
25th so it'll take about a month (or a lil' more).
Oddly, April 25th was Marconi's birthday.

Source record: 112190

Greetings,

I have read all the responses, but I think they all miss the the
mark on learning code.

The question you must ask yourself is do I want to learn code to
pass the 5 WPM test or do I want to use it.

Either way I think the way to go is the Koch Method.

Check out http://www.qis.net/~k3pzn/links4.htm

They talk about using SuperMorse, I like MorseCat beta version.
The release version of MorseCat mustn't be used. It will only
do Farnsworth at 12 WPM. Not helpful! The beta version it is
setable to 18 WPM like it should be.

Good luck!

Testing here in this district (NE FLORIDA) is $6.85. This is regardless of what test you take and how many you take at once. He will need to renew every 10 years(12 with the grace period) and that is free. I can't imagine it being much more expensive then that as the VEC can only charge for admin fees and supplies. Check with your local ham clubs to see who offers the testing and see if they offer classes as well this is a great way to get started and meet other prospective hams.
Good Luck and 73

The license is in fact free, however, the license tests are
administered by Volunteer Examiners (VE) that are usually
coordinated by a local club. The clubs usually charge a small
amount to cover their administration. The last session I was
at, in July 1999, charged $6.45.

For that $6.45 you can take as many tests as you want, in one
sitting. I have personally taken 3 tests at one sitting, but
most people take them one at at time. It will then cost you
$6.45 each time you go back. No refunds if you don't pass.
This figure may vary slightly between different testing sessions.

The entry level test is currently, as of April 15,2000, the
Technician License. There use to be a Novice license but
the FCC restructured the license setup and now there is only
Technician, General, and Extra. Prior classes of licenses,
Novice and Advanced, still have privileges acording to that
license.

The 13 and 20 WPM Morse Code tests have also been eliminated.
Only the 5 WPM test is required. The ARRL web site should have
all the details on the license re-structuring.

You should also be able to use the ARRL web site to search
for a VE session near you. Usually they are given the first

Saturday of every month.

NOTE: Once your husband gets his license, he may be able to
get his Grandfather's old call letters. Check out the Vanity
Call Sign section at the ARRL web site. The fee for a Vanity
Call Sign is $14.00.

I'm just starting to get into the HF bands after many years of VHF and above. I am currently a tech+ and will upgrade soon to General. I am have a hard time finding an online source that makes it clear which classes can operate on which frequencies in which modes! Part 97 hase one chart for Frequencies by class, then another chart for Modes by frequency, and then I have to go look at the ARRL band plan to see how it differs from the Mode chart in Part 97! Isn't there an easy chart that just shows it all in one place? I'm ITU Region 2.

Thanks fro your help.

Sorry, Ron, but you're wrong.

In the first place, the Chinese happen to know where Taiwan is.

In the second place, even if they were going to rely on GPS to find a target, the SA function of our military GPS is worthless for reducing the accuracy. All they need is one station at any known point in the general vicinity and they have all they need to overcome the "inaccuracy" we have been adding to the signal.

In fact, the only people who have fought against removing SA have been the handful of companies who have been making big bucks by doing exactly that.

For the last several years we have had the Defense Department paying to operate the GPS system, and paying super premium prices for one-of-a-kind cryptographic GPS gear, and paying still more to deliberately degrade the GPS signals -- all in the supposed name of "National Security"

And at the same time, we have had the Commerce Department paying civilian firms to defeat that inaccuracy, and those same civilian firms then selling the correction signal at a tremendous profit.

But even with the big bucks these companies' lobbyists threw at Congress, eventually our elected benchwarmers figured out that it didn't make much sense for one piece of the federal government to be paying to screw up the system and another piece of the federal government to be paying to unscrew it. When all was said and done, no one could actually show any real "National Security" advantage to SA -- the only security involved was the financial security of a few companies selling Differential GPS receivers and the subscriptions to their signal service that defeated SA.

Can you say "misplaced aggression"? Some people feel justified in attacking innocent people as long as it helps them make their point. These are the same people that feel the bands belong to them because they got there first.

I guess being a ham for 11 years still doesn't make me an equal in some peoples eyes. Even if I never upgrade to General, I'd still have the same question about my existing HF rights as a Tech+. I Bought an HF rig and am trying to figure out what type of antenna to build.

Thanks to those who value people more than issues.

Brett - N7OLQ

Sorry, Ron, I have to disagree with you. Clinton will have made sure that his bosses have good GPS gear.

There is no valid security issue with "stutter removal." At the time that it was originally developed, it was not foreseen that GPS would be in such common use by surveyors and general aviation (two groups requiring the absolute best GPS fixes possible).

As far as military use, anyone with the capability to build a weapon where the GPS would be of value can easily get past the stutter (or just build a weapon which won't notice the difference between this spot right here and that spot 16 meters over there).

Not just Commerce; the DOT's FAA has spent elephant bucks setting up a correction system so that GPS based instrument approaches can perform at greater precision. When I first heard the briefing on that my thought was, "what's the other hand doing?"

By the way, GPS approaches are not trivial toys for general aviation; the number of approaches being developed has absolutely mushroomed since receive systems started getting affordable. It is so popular (and effective) that it killed the microwave landing system (MLS) that had been in develepment for nearly 20 years, and was acutally installed at MDW for a short time. Phffft. Gone.

Where before it might have only gotten as close as 30 ft away, the
result being exactly the same.

Of course, if you'd read the release, you'd know that they can degrade
the signal again at any time (as well as regionally), thus assuring the
direct safety of your ear, but still not its ultimate survival.

This from a female ham with TIT in her call. What self respecting
female hame would keep a call such as that?

A female "hame". Looks like a Freudian slip for "dame".

Anyway, why are you trying to change the subject? Was she getting too
close the the truth?

Hardened targets require precise hits. Thirty feet away probably isn't close enough. Can we assume that whats inside your head is a hardened target? ;^)

Hey, I removed -packet from the address.

3294. KV4FZ: When the Feds Fanned Out

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-01 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <1823-390E30B2-67@storefull-242.iap.bryant.webtv.net>
Source record: 112226

It was before Hurricane Andrew, 1992. I had been invited to St. Croix, all expenses paid. From the airport, we twisted some twenty minutes through the old island, turning up a dirt road where we bounced slowly to the top of a hill and stopped. Herb, Monika Shoenbohm and I got out of the car.

The scene was breath-taking: standing atop a one hundred foot cliff, the shimmering Caribbean, turquoise in color, danced gently as far as the eye could see, etched by a receding sun that highlighted St. Croix's tropical allure. Close by was a seventy foot tower crowned by monobanders, an unmistakable clue that a zealous ham lived nearby. This had to be the best ham location in the world!

Next day, a world away, we entered the island's, old federal Courthouse. (A new one has since been built.) I was told to sit outside the courtroom in an old veranda appointed with rickety chairs. During my few days wait there, characterized by dodging real time pigeon droppings in soaring temperatures, I would see a panorama of intrigue unfolding.

Like musical chairs, witnesses came and went. Except for some amiable FCC guys, people showed their animus against Herb as they buzzed secretively. An aura of importance underscored this scene, one I could never have imagined if I weren't seeing it with my own eyes.

The grapevine soon told that I was there to assist Herb, and the human dynamic changed from a modicum of warmth to ice cold. Some would not sit next to me or within ear shot. Education about federal prosecution was just beginning.

At lunchtime the Court took recess. Herb and Monika invited me for lunch a few blocks away. As we strolled, taking care to step up and down the curb stones of zany sizes, we were followed by several of the trial people. We arrived at the restaurant, quaintly decorated with smart woodwork. Sipping my drink, I surveyed the lunch crowd with the natural curiosity of a tourist. That's when I noticed the same people from the trial sitting nearby.

Herb pointed out the prosecutor. Others remained nameless during the entire ordeal, but I would see them everywhere. And whenever I used the telephone back at Herb's house, I heard suspicious clicks.

Some one million dollars was poured into this prosecution. The Secret Service and FBI, which had interviewed dozens of witnesses on the island and in the States, were there in force. It didn't take a genius to determine, they were scrutinizing our every move.

Herb, strong minded, outspoken and, at times, using very bad judgement, had made many enemies. As one of the Republican party faithful, he had exposed corruption and wrongdoing, impacting the careers of many, including the Governor. He had also rankled many hams.

I first met Herb in the mid-eighties at Miami International Airport. Seeking something meaningful in my ham life, I was there to interview him about the telephone, toll, bypass feud polarizing the ham community. Herb had taken a stand against the Intercon Net for allegedly misusing amateur phone patching. He often pointed out that the Jim Jones' group had used Intercon for some of their business. Herb was just the kind of subject I needed: hot news for information bulletins and print journalism.

Only the future would tell how hot the story would become. As Mr. Law and Order, Herb had raised the bar of justice for himself and created a coterie out to get him.

When Caribbean Long Lines Services started operating on St. Croix, Herb mailed a one hundred dollar check as enrollment fee. That check, which the prosecution tried to cover up, was never cashed. Meanwhile, the irrepressible Herb was fascinated by new telephone technology. His mind danced with protocols, frequencies, coverage, and entry codes.

He began hacking to learn how secure the system was, astonished to find that one out of three numbers went through. This new company, Calls, had virtually no security. Wrapped up with his discovery, he discussed it openly, including on ham radio.

That's when his enemies joined forces. Among one another they cited the thousands of letters written to the FCC and others as evidence that Herb must be doing something wrong that needed to be stopped. His open talk about Calls' security was ideal corroboration. At the same time, new legislation was being enacted to thwart credit card crime and funded to go after exemplary cases. Herb was in the crosshairs: The million dollars was spent on building this one case against him.

But in order to return a conviction, the government had to prove more than $1000 telephone fraud. No such crime, in fact, existed, so they fabricated a printout with phoney charges that rose slightly above the minimum. The fact, the alleged recipients didn't know Herb and hadn't talked with him didn't matter.

The prosecution, with the cooperation of the investigators, invented real people out of thin air who in reality denied taking with Herb. Their expert testified to the authenticity of the list, and the Secret Service testified that they had interviewed every recipient of every call. With exculpatory evidence hidden, here was the trial's prelude: Pointing his finger at Herb, the prosecutor warmed up to the jury by telling them that here was a kingpin of crime. Seemed an open and shut case.

Only after the trial was Herb able to research calls on the surprise printout. One was a Franklin Gell of Miami,Florida. I looked up Mr.

Gell in his Little Havana home. Warmly welcoming me into his home, he offered me a cup of Cuban coffee. We sat at the kitchen table where I produced the printout. Yes, we were looking at his Miami telephone number, but he said he didn't know any Herb Schoenbohm.

I asked him if he could document his telephone calls. Returning from a closet with an old leather binder, he searched his records. Although he hadn't ever talked with Herb, he was in contact at the time with a colleague on St. Thomas.

Here was a bold faced deception involving many on the prosecutorial team: random calls having nothing to do with him had been arbitrarily connected to Herb. The Judge reversed two counts of his conviction. One count remains to the time of this writing: "possession of a counterfeit access device with intent to defraud."

And what is the device? Numbers in Herb's head. Not one number or any precise number but some number. Talk about Constitutional rights but don't put Herb under that umbrella, because those rights can be snatched in a heartbeat by those in control.

Like him or hate him, Herb Schoenbohm's right against self incrimination and to due process have been violated. What's more, because the FCC, at their administrative hearing, expected Herb to be completely open while still involved in his judicial process, his position has grown worse. His ham license may not be renewed.

Overreach is understatement!

I asked a fellow ham that had a qso with mir back in 97. He said
that made the qso with only 50 watts. I asked him via e-mail if
I used 200 watts would it be good. He told me that 200 watts
would be overkill. If I used 200 watts would the cosmonauts tell
me to turn down my power? I was wanting to find out if 200 watts
would really be too much or would it just give me a better
chance at the qso before I purchased the 200 watt amp. Thanks
for your time and help. Thanks, Sam

symbiot,
By now most, if not all, of the Extra class 1x2's, and
2x1's are probably already issued. So, that leaves the 2x2
calls, AA#xx through AZ#xx call signs. You may 'find' one
of the 1x2/2x1's still around, but don't count on it.

Sorry, I've been on Usenet for 12 years I have learned that flame-mail is
both useless and annoying to bystanders. I believe the rest of the world
can see what drooling morons these guys are without any flames. I'd rather
they just went away than lower myself to their neanderthal mentality.

It is quite sad that this very newsgroup I've been reading for so long used
to be an incredible fountain of knowledge where I saved about 1/3 of the
daily traffic as reference material! Now it more closely resembles a
cesspool. It just goes to show that many people can't handle freedom or
power - they have no self disclipline (sadly our government has also
realized this fact and is doing their best to take it away from us).

There are no new Novice licenses being issued -- the entry level is
Technician. The license is free.

> 2. I saw several websites that said the test cost $5 to $6 and some

This depends on the group overseeing the exam. I've never seen a free
exam session, most exams are proctored by ARRL-directed Volunteer
Examiners, and cost $6.65.

Welfare Hams are assholes like "John" - who's wife spends days
at the bus stop trollin for black-ass coons while he sits around
the house in his underwear, all 350 pounds of the sack-o-shit
whilst purveying B&D or S&M web sites. How disgusting!

The VEC no longer "sends in the paper work". Any more, anything a VEC sends
in
is electronically uploaded & no paperwork is sent.

"Jerry Smith" <JDSmith8@Rest.Net> wrote
> I up-graded from advanced to extra on the 15th.of April and it was

3310. Vanity Callsign format: A question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-02 00:00:00 UTC
From: symbiot@my-deja.com
Message-ID: <8eldkokrj1@nnrp1.deja.com>
Source record: 112043

Greetings:

I'm confused as to what formats are acceptable when applying for extra class vanity calls.

I've read the blurb on the ARRL website, but I'm still alittle confused.

I was told that extra class calls are now all 2x2. Is this correct?

Is "A<number><letter><letter>" valid? Is "A<letter><number><letter>" valid? How about "A<letter><number><letter><letter>"?

Thanks for your help!

>the first license for the Novice and the Technician cost?

The test cost depends on the test team. My last test cost $6.65
which I believe is the highest they are supposed to charge currently.

There is no more Novice class licenses, Technician class is the
"beginners" license now. Then General and then Extra. The Tech test
requires no code test.

> And there are witnesses from the scene, including those present
>during the 'snatch' who are claiming that what was reported by the
>Post just isn't true.

How would those present know that no one had a concealed weapons
permit?

Either the house behind the Gonzalez home was "neutralized" first
(due to cadre of some 15 "soldiers" with criminal histories) or it
wasn't. Which is it? TV video certainly shows that neighbor's home
being "neutralized."

Either there were those in the crowd who claimed that they would
die preventing the child from being taken or no such words were
ever spoken by any of them. Which is it?

Either spectators were assaulting agents with trash cans or they
weren't. Which is it?

Try to be open to both sides; weigh the reports and evidence carefully.

Jeff

3319. Re: Vanity Callsign format: A question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-02 00:00:00 UTC
From: LRod <lr0d@my-deja.com>
Message-ID: <8elm6btlr1@nnrp1.deja.com>
Source record: 112052

There are 4 groups of callsigns, A, B, C, D. An Extra can request a call from any of the groups. but they usually get either a Group A or a Group C call. We'll ignore Group C for this discussion, but many of the rules mentioned here also apply to Group C.

Group A calls are for Extras only (although you will encounter some old timers with 1x2 calls who are Advanced or even General from the old days).

It used to be that each Group was further broken down into subgroups, but I can't seem to find reference to that at the moment. In the case of Group A, the priority was 1) 1x2 (not currently being issued), 2) 2x1, and 3) 2x2 with a prefix beginning with A.

Whenever the systematic issuance of calls from a subgroup have exhausted the supply, the call is issued from the next lower Group or subgroup. For example, there aren't any domestic 2x1s being issued, so Extras would get a 2x2 (prefix Ax). When those run out (don't think any have yet), the FCC will start issuing 2x2s from Group B.

Group A calls may have the format 1x2, 2x1, or 2x2 where the first letter in the prefix is A.

Any 1x2 with the prefix K, N, or W is valid. No 1x2 call may have the prefix A.

Any 2x1 with a prefix of K, N, or W is valid except for those where the second letter in the prefix is H, P, or L (those are reserved for residents of Pacific, Carribean, and Alaska, respectively). 2x1 calls may begin with A so long as the second letter is between A and K (except H, as above).

Any 2x2 with a prefix from AA through AK (AL is valid for Alaskan residents) is valid except AH (except for Pacific residents).

Here is an important point: no callsign change will be made, regardless of upgrades, unless YOU request it. Not for upgrades, not for renewals, not for address changes, nothing. You have to do something to get a new call.

Now, when a person upgrades, AND if the person checks the form for a call sign change, the call will be issued from the pool of calls still available. In the case of Group A, that would NOT be a 1x2, and in many areas is not a 2x1, so could be a 2x2 with a prefix starting with A. I don't believe any areas have run out of 2x2 beginning with A calls yet.

However, if you request a vanity call, you may select from any available, including a 1x2 or 2x1, even if they are not being systematically issued. You could also request a call from any of the other Groups.

Just remember you can't have A2XZ, but you might be able to get K2XZ. You can't get AM6F, but you might be able to get AI6F. You can't get AZ3RF, but you might be able to get AD3RF. You also can't get a 2 letter prefix where the second letter is H, P, or L, unless you live in one of those areas.

I hope this helps clear things up.

True in some areas, but not all.

> and 2x1's are probably already issued.

Not very true, unless it's happened in the last week. 1x2s are the most popular. In any event the 9th and 0th areas haven't been hit nearly as hard as the 4th.

> So, that leaves the 2x2 calls, AA#xx through AZ#xx call signs.

Correction: the A prefixes go from AA#xx through AL#xx. No U.S. calls may start with AP#, for example (Pakistan).

Note my long post in this thread that also covers the exclusions of H, L, and P in the second letter of a 2 letter prefix.

3324. Herald's Silence Confirms Washington Post Story ...

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-02 00:00:00 UTC
From: AllAmericn@webtv.net
Message-ID: <24602-390E5CAD-41@storefull-248.iap.bryant.webtv.net>
Source record: 112057

Unless there were a factual basis, no newspaper would publish the Washington Post account, including the National Enquirer. Every piece about a controversial subject has supporters and detractors who make every conceivable argument to weight the scales in their favor.

As long as the story is correct, the Miami Herald won't touch it. As Miami turned multi-cultural, the Herald's circulation dipped dangerously. The newspaper famous for breaking news is but a characterture of what it was.

From the north, the Fort Lauderdale Sun Sentinal has invaded its territory with an eye on replacing it. Upset about Herald coverage, the Hispanic community demanded a change in editorial policy, with the result that the newspaper took in many anti-Castro personnel.

When the Herald responded thusly to the Hispanic voice, African American readership dipped. Feeling betrayed, the now-minority black community believer its interest was forfeited. As a consequence, African-Americans migrated to the African-American, Miami Times and Fort Lauderdale Gazette. The large Jewish population has been put off by the Herald's rich Hispanic coverage while its affairs languish unreported.

The fact that the Miami Herald hasn't covered that story is ultimately controlled by one immutable fact: Carrying the story at this time in this town could be its deathknell.

Bob Sherin, W4ASX
Miami, Florida

>permitted up and down the Ham Bands.

Hi Rick,
Do you know which bands have "CW-only" sub-bands? We'll wait 10 seconds
for you to answer...

Time's up. The only CW-only sub-bands exist up on VHF and UHF. They're
the weak-signal segments. On HF, you'll find CW users in the "Data
sub-bands" where you'll also hear FSK (RTTY) and other digital modes.
There are no CW-only sub-bands on HF. In fact, CW is the only mode
privileged to use *any* frequency on *any* band; there is no restriction
as to where CW can be used. By a gentlemen's agreement, CW operators
voluntarily remain out of the phone segments, but they don't have to.

So, you're actually calling for the end of the data sub-bands, meaning
you'll then have packet and RTTY and phone all intermixed. What a mess for
the phone ops. But it won't bother the CW users and their very narrow-
bandwidth filters.

You are right on the money regarding phone patches. Of course they are legal. Would sure as hell shoot the crap out of MARS patches wouldn't it? However, what the heck is that first part of the first line all about? Why should anybody have any "qualms"? They didn't make the rules. They aren't "evading" anything. It is not as if there is a choice of taking a higher code test. If somebody says something stupid (including me) fine...correct them. If you disagree with restructuring then fight IT, not the hams. Its time to stop blaming the individual hams. I'm not sure what many of the people on this group want. They think nobody should upgrade now because things have changed? It might show some opinions, but wouldn't that pretty much gaurantee the end of amateur radio?

That's exactly been my point, Jeff. There are two sides, but only one is being reported. Not only are there no dissenting reports from the mainstream press, but there has been no individual variations in interpretations of the mainstream press. That calls for suspicion in an open mind, and yet no one in the mainstream seems to find it odd that the skeptical, suspicious nature of the mainstream press is absent.

Yes, Jeff, keep and open mind. And question. Because what we're being told, isn't what the truth is.

How convenient that editors should be there not only to save us from information overload, but that they should all be in lockstep with each other.

Witnesses on the scene can see things the camera, with it's narrow angle, does not. Witnesses on the scene can see 'behind the scenes.' When was the last time you saw anything as dramatic as what went down Holy Saturday, that the Press wasn't all over the neighbors getting the 'behind the scenes' perspective, with cameras in the faces of those that were there? When was the last time that you saw a dramatic event of ANY kind that a reporter didn't ask bystanders, and neighbors, people on the street, 'how do you FEEL about that?", "what did you see?","where were you when it all happened?" Where are THOSE interviews? Where are the cameras in the faces of the people in the neighboring house? Where are these intrusive, watchdog media, asking questions, digging out 'The Real Story--Film at 11'? Why are the so silent, and why are they willing to take the words of Greg Craig, attorney to one side of the dispute, as Gospel?

Being there endows witnesses on the scene to see what the camera doesn't point at. And right now, the camera isn't pointing at anything that raises the kind of questions that journalism exists to ask.

Well, the house was searched just a few days prior to the raid. No weapons were found. The house was under constant surveillance between the search and the raid. No weapons were taken into the house.

The Feds defend their waving guns around on the claim that there were "rumors" of weapons in the house, yet they knew that the only weapons brought in were the machineguns they were carrying.

If that doesn't cry of "behinds the scenes machination," what would?

Not quite! I purchased a used commercial rig (motorola), ordered xtals, retuned it into the ham bands(440), built and tested a 9600 baud modem, then made modifications to the radio to get it to run 9600 data, how silly for a Tech.

3337. Clarification on WA9KJI

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-02 00:00:00 UTC
From: BurkSWL@webtv.net
Message-ID: <18607-390EDDB0-12@storefull-133.iap.bryant.webtv.net>
Source record: 112070

A clarification needs to be made on the BS David Castle is spreading to new AG's on 3.950 MHz. Mr. Castle implies that he's not being allowed to check-in to the Liberty Net because they don't allow dissenting viewpoints. That's crap! Dissenting viewpoints are always allowed on the Liberty Net! And since when has the Liberty Net been some type of single mass opinion anyway?? Liberty Net members often disagree among themselves on various political matters. This situation with the boy from Cuba is a good example.

No, Mr. Castle (along with W9ART, Art Visser) are not allowed on the Liberty Net because of their CONTINUED reckless and malicious misbehavior on 3.950. The new complaint from March bears this out. It's my understanding that the fella who filed the complaint hired a lawyer because he was so fed up with Riley pussyfooting around with these two radio outlaws. And I guess he's not even a Liberty Net member!

This puts Riley between a rock and a hard place. Has he been told by Clinton supporting higher ups within the FCC to let Castle and Visser do their thing?? Or will Riley's hand now be forced through legal channels to do something about these jammers. Stay tuned...

Don B.

If I remember correctly, the '96 Blazer was the same body style as the '89-'98 pickups. Working in a LMRS shop, I've punched and grommeted holes in the passenger side of the transmission hump (on the vertical riser) with some success (fairly quick, but you get "greased" by the undercarriage - so that's the "quick and dirty method"). On my own '91 Silverado; I didn't want to try that - wanted to keep spinning drill bits away from the 3-day old clutch slave cylinder. I found that the broadcast radio antenna coax went out through a HUGE THICK grommet just below the A/C evaporator box on the passenger side firewall. It took some time, but I managed to pull two #10 stranded lines out to the power buss next to the A/C dryer without cutting into the grommet; just "stuffed and cussed" it through with the antenna lead.

Before anybody starts yelling: 1.) Yes, stray RFI could be coupled from the new power leads onto the coax shield; if repeat IF you aren't using some kind of noise choke on the power. My thought's (and my Elmer's at the shop) was that strange noises on the stereo were preferable to erratic operation of the ABS system should go out the driver's side. 2.) That power buss is where the high-amp accessories and the alternator are connected to the battery. This almost guarantees the need for a noise filter on the radio lines; but is a much cleaner location to tie down the B+ leads. I've powered much gear from those points, 75W Micors, MASTR II - based IMTS rigs, solid state HF amps. My own gear has been powered from that point since July '91 with virtually no problems - can't say *zero trouble* - when one of the diodes gave up in my alternator, the chokes couldn't keep the ringing noise out of 6M TX with the brick on. Since it also didn't charge the battery properly, I just decided to replace the alternator. Problem solved.

Hi,

People should never see movies that they are expert in. After
all it was just a movie. Sure the tech is flawed, all sci-fi
are (this one a little more than most others I have to admin).
Time plots are really flawed because things have to happen
they way they did. Otherwise there would be no reason to go back
and change them. The classic paradox.

I thought this was a fun movies as long as you keep your eyes
off the man behind the curtain. If you don't you find flaws
all over the place.

Not a great movie, but not a bad one either.

Just my own opinion .. I have decided that I don't like EBAY sales.

I would much rather come to some agreement instantly with some other post which sells an object ... and to find out immediately whether or not I will get the object. Waiting out several days to find out whether or not I win a bid does not get me the coveted object usually. To my experience, most EBAY bids wildly exceed the worth of the object. OK for the seller, I guess, and for those who simply MUST have it at any price.

Oh yeah !

Whenever I see law enforcement personnel have to *forcibly* enter a
dwelling they're *ALWAYS* unarmed, and they do so only after a
personal visit by the Attorney General of the United States has
failed.

Despite who knows who or what outside , there's NO CHANCE someone
inside will grab a butcher knife , a baseball bat, screwdriver etc. No
sirree that just doesn't happen. (No heated emotions or anything here,
just a bunch of real *stable* friendly folks)

>If that doesn't cry of "behinds the scenes machination," what would?

Sure seems like some folks that are always spouting about their 'Right
To Bear Arms' sure get upset when law enforcement personnel protect
themselves.

I don't know why? Frankly the most usefull part of the whole
procedure is the paperwork of licensure, and the act of dealing with
officaldom in getting the license. We could as I have often said
survive no test at all by the looks of things. Might not be the best
method of licenuse but might not be that much different. Indeed the
more I read the newgroup the more I question the need for anything
more than GRMS type licensing

kw,

I only know "the facts" from the coverage I see.

The Washington Post reported a well organized strategy to stop the government from taking custody of Elian. Of this I have no doubt. Waco taught us a new regard for safe techniques to execute law and order.

No responsible executive would attempt that operation with minimal threat of force, because the situation was clearly fraught with potential violence. Besides the "three tier" plan, the crowd was on the verge of anarchy. An extraction even a few seconds slower could have resembled Waco.

The government's non-violent strategy is a show of force accompanied by the loud the barking of directions, then peaceful removal. Thank God it worked.

In this scenario, the guns needn't be stored in the house to be a threat, because the house is surrounded by the hundreds of thousands of supporters in Little Havana. No telling among those folks, who would do what to whom with what.

If history provides any lessons, I believe they had no choice in the extraction.

PeterMause,

In a dark cave, you cannot see the sun either. That doesn't mean it isn't shining.

These inside machinations could not have been detected solely by cameras and eye witnesses. Much more had to be done to unearth the "three tier" system of "protection."

Peter, to my mind you are arguing truisms that, throughout, do not support your premise. Having studied your piece, I was left with a feeling of having read glittering generalities that don't address the lengths to which the family went in flauting U.S. law. And your piece lent utterly no credibility to you position.

Nonetheless, thank you for proffering it.

Naturally.

Nothing like this can EVER be taken at face value. This is definitely straight out of the X-Files with hidden agendas, secret agents, behind the scenes machinations and black helicopters full of *armed* UN Troops providing surveillance and backup using super-secret 'Cloaking' technology so they couldn't be seen or heard. I just happened to be wearing my Sony X-Ray glasses (to see what Marilysis looked like under those clothes ;)) when I happened to glance skyward and saw the 'Cloaked' chopper hovering there.

From: minus148@my-deja.com
Message-ID: <8en42o$gm3$1@nnrp1.deja.com>
Source record: 112084

Hi all,
I'm working on a computer program that simulates the way that a satellite-borne passive microwave radiometer views an Earth scene. One thing that I have left to do is to include the antenna response. Currently, my program operates in "pencil-beam" mode. That is, the antenna gain pattern is a delta-function. My question is, given a more realistic gain pattern (gain as a function of angle from the boresight), what is an intelligent way to integrate over this pattern such that computational time and errors are minimized? I'm sure someone's worked on this before... My algorithm basically works by shooting rays out from the antenna, through a 3D environmental scene, to the earth's surface. I then integrate back along this path to the the top-of-the-atmosphere brightness temperature. So, I see myself sampling some angular space around the boresight and applying gain corrections to the incoming signal. I'm wondering if there's an intelligent way to sample that angular space???

That is only partially true. As a Tech+ there are several CW only bands for me. I can do CW but not any of the other data modes. That may have been what he was referring to.

Source record: 112092

Hi,

I just found a great web page that teaches Morse using the Koch Method
with a java applet. The URL is:

http://www.vmeng.com/minow/MorsePractice/MorsePractice.html

I have only played with it a little bit, but it is without a doubt the
best code teaching program that I have seen. I would learn the code
at 15+ WPM. 5 WPM is a trap and unless you want to waste your time
learning the code you should start at 15+. Then when you learn it
will stay with you. You may even find that you like the code.

3361. Hi! Nice To Meet You!!

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-02 00:00:00 UTC
From: hilal@connect4free.NET
Message-ID: <20000502184607.08C4153634@latimer.mail.easynet.net>
Source record: 112094

DON'T READ THIS EMAIL IF:

1. YOU ARE NOT INTERESTED IN MAKING US$46,650 OR MORE IN THE NEXT 90 DAYS; OR
2. YOU DON'T BELIEVE THAT IT CAN HAPPEN; OR
3. YOU ARE TRULY SATISFIED WITH WHAT YOU ARE EARNING FROM WEB-BASED REFERRAL PROGRAMS.

If you would like to make at least $46,650 in less than 90 days! Please read the enclosed program...THEN READ IT AGAIN!!!

THIS IS A LEGITIMATE, LEGAL, MONEY MAKING OPPORTUNITY. It does not require you to come into contact with people, do any hard work, and best

of all, you never have to leave the house except to get the mail. If you believe
that someday you'll get that big break that you've been waiting for, THIS IS IT! Simply follow the instructions, and your dreams will come true.

This is what you MUST do:

1. Order all 5 reports shown on the list below. You can't sell them if you
don't order them.

a. For each report, send $5.00 CASH, the NAME & NUMBER OF THE REPORT YOU

ARE ORDERING, YOUR E-MAIL ADDRESS, and YOUR NAME & RETURN ADDRESS (in case of a problem) to the person whose name appears on the list next to the report. MAKE SURE YOUR RETURN ADDRESS IS ON YOUR ENVELOPE IN CASE OF ANY
MAIL PROBLEMS!

b. When you place your order, make sure you order each of the five reports. You will need all five reports so that you can save them on your computer and resell them.

c. Within a few days you will receive, via e-mail, each of the five reports. Save them on your computer so they will be accessible for you to send to the 1,000's of people who will order them from you.

2. IMPORTANT-- DO NOT alter the names of the people who are listed next to each report, or their sequence on the list, in any way other than is instructed below in steps "a" through "g" or you will lose out on the majority of your profits. Once you understand the way this works, you'll

also see how it doesn't work if you change it. Remember, this method has

been tested, and if you alter it, it will not work.

a. Look below for the listing of available reports.

b. After you've ordered the five reports, take this advertisement and REM0VE the name and address under REPORT #5. This person has made it through the cycle and is no doubt counting their $46,000! Also, change the name of the company, the address, and the REM0VE e-mail address on the top of this document to your own.

c. Move the name and address under REPORT #4 down to REPORT #5.

d. Move the name and address under REPORT #3 down to REPORT #4.

e. Move the name and address under REPORT #2 down to REPORT #3.

f. Move the name and address under REPORT #1 down to REPORT #2.

g. Insert your name/address in the REPORT #1 position.

Please make sure you copy every name and address ACCURATELY!

3. Take this entire letter, including the modified list of names, and save it to your computer. Make NO changes to the instruction portion of this letter.

Your cost to participate in this is practically nothing (surely you can afford $25). You obviously already have an Internet connection and e-mail is FREE!

To assist you with marketing your business on the internet, the 5 reports you purchase will provide you with invaluable marketing INF0RMATION which includes how to send bulk e-mails, where to find thousands of free
classified ads and much, much more.

In addition you will be provided with INF0MATION on Internet Marketing Clubs such as INTERNET MARKETING RESOURCES(IMR): This is one the premiere internet marketing clubs on the INTERNET. This club provides a forum where internet marketers from all over the world can exchange ideas and
secrets on Internet Marketing. In addition, members of this club are provided free internet marketing tools and services for the Do-Yourself-Internet-Marketer.

They will provide you with free bulk e-mail software and up to 1,000,000

fresh e-mail addresses each week. This club will provide you with hundreds of free resources which include: How to obtain free web sites, how to obtain top rankings in search engines for your web-site, how to send
bulk e-mail into AOL and Compuserve, how to market your products on newsgroups, free classified ads, electronic malls, bulletin boards, banner ads and much more.

There are two primary methods of building your downline:

METHOD #1: SENDING BULK E-MAIL

Let's say that you decide to start small, just to see how it goes, and we'll assume you and all those involved send out only 2,000 programs each. Let's also assume that the mailing receives a 0.3% response. Using

a good list the response could be much better. Also, many people will send
out hundreds of thousands of programs instead of 2,000. But continuing with
this example, you send out only 2,000 programs. With a 0.3% response, that is only 6 orders for REPORT #1. Those 6 people respond by sending out 2,000 programs each for a total of 12,000. Out of those 0.3%, 36 people
respond and order REPORT #2. Those 36 mail out 2,000 programs each for a

total of 72,000. The 0.3% response to that is 216 orders for REPORT #3. Those
216 send out 2,000 programs each for a 432,000 total. The 0.3% response to
that is 1,296 orders for REPORT #4. Those 1,296 send out 2,000 programs each for a 2,592,000 total. The 0.3% response to that is 7,776 orders for
REPORT #5.

That's 7,776 $5 bills for you, CASH!!! Your total income in this example

is $30 + $180 + $1,080+ $6,480 + $38,880 for a total of $46,650!!!

REMEMBER FRIEND, THIS IS ASSUMING 1,994 OUT OF THE 2,000 PEOPLE YOU MAIL

TO WILL DO ABSOLUTELY NOTHING AND TRASH THIS PROGRAM! DARE TO THINK FOR A MOMENT WHAT WOULD HAPPEN IF EVERYONE, OR HALF SENT OUT 100,000 PROGRAMS
INSTEAD OF 2,000.

Believe me, many people will do just that, and more! By the way, your cost to participate in this is practically nothing. You obviously already have an internet connection and e-mail is FREE!!!

REPORT #2 and #5 will show you the best methods for bulk emailing, tell you where to obtain free bulk e-mail software and where to obtain e-mail

lists and show you how to send out 1,000,000 e-mails for free.

METHOD #2 - PLACING FREE ADS ON THE INTERNET

1. Advertising on the 'Net is very, very inexpensive, and there are HUNDREDS of FREE places to advertise. Let's say you decide to start small just to see how well it works. Assume your goal is to get ONLY 6 people to participate on your first level. (Placing a lot of FREE ads on the
internet will EASILY get a larger response.) Also assume that everyone else in YOUR ORGANIZATION gets ONLY 6 downline members. Follow this example to

achieve the STAGGERING results below.

1st level--your 6 members with $5 ($5 x 6).....$30
2nd level--6 members from those 6 ($5 x 36).....$180
3rd level--6 members from those 36 ($5 x 216).....$1,080
4th level--6 members from those 216 ($5 x 1,296).....$6,480
5th level-6 members from those 1,296 ($5 x 7,776)....$38,880
.....$46,650

Remember friends, this assumes that the people who participate only recruit 6 people each. Think for a moment what would happen if they got 20 people to participate! Many people will get 100's of participants! THINK ABOUT IT!

For every $5.00 you receive, all you must do is e-mail them the report they ordered. THAT'S IT! ALWAYS PROVIDE SAME-DAY SERVICE ON ALL ORDERS! This will guarantee that the e-mail THEY send out, with YOUR name and address
on it, will be prompt because they can't advertise until they receive the report!

AVAILABLE REPORTS

*** Order Each REPORT by NUMBER and NAME ***

Notes:

ALWAYS SEND $5 CASH (U.S. CURRENCY) FOR EACH REPORT
CHECKS NOT ACCEPTED
ALWAYS SEND YOUR ORDER VIA FIRST CLASS MAIL
Make sure the cash is concealed by wrapping it in at least two sheets of

paper. On one of those sheets of paper, include: (a) the number & name of the report you are ordering, (b) your e-mail address, and (c) your name & postal address.

PLACE YOUR ORDER FOR THESE REPORTS NOW:

REPORT #1 "The Insider's Guide to Advertising for Free on the Internet"

ORDER REPORT #1 FROM:

Hilal Kanafani
9 Rivercourt Rd.
Hammersmith
London
W6 9LD
United Kingdom

REPORT #2 "The Insider's Guide to Sending Bulk E-mail on the Internet"

ORDER REPORT #2 FROM:

Nick Chan
1055 Nam Yiu House

Nam Shan Estate
Kowloon
Hong Kong

REPORT #3 "The Secrets to Multilevel Marketing on the Internet"

ORDER REPORT #3 FROM:

WH Chan
Flat 16, 7/F Nam Cheong Theatre Building
223-237 Nam Cheong Street
Kowloon
Hong Kong

REPORT #4 "How to become a Millionaire utilizing the Power of Multilevel

Marketing and the Internet"

ORDER REPORT #4 FROM:

Joshua Benton
1314 W. Mossman
Springfield,Illinois
62702
USA

REPORT #5 "How to SEND 1,000,000 e-mails for FREE"

Ryan Mack
4656 Nine Oaks Circle
Bloomington,MN
55437
USA

ORDER REPORT #5 FROM:

******* TIPS FOR SUCCESS *******

* TREAT THIS AS YOUR BUSINESS! Be prompt, professional,
and follow the directions accurately.

* Send for the five reports IMMEDIATELY so you will have
them when the orders start coming in because:
When you receive a $5 order, you MUST send out the requested
product/report.

* ALWAYS PROVIDE SAME-DAY SERVICE ON THE ORDERS YOU RECEIVE.

* Be patient and persistent with this program. If you follow the
instructions exactly, your results WILL BE SUCCESSFUL!

* ABOVE ALL, HAVE FAITH IN YOURSELF AND KNOW YOU WILL SUCCEED!

******* YOUR SUCCESS GUIDELINES *******

Follow these guidelines to guarantee your success:

If you don't receive 20 orders for REPORT #1 within two weeks, continue advertising or sending e-mails until you do. Then, a couple of weeks later you should receive at least 100 orders for REPORT#2. If you don't,

continue advertising or sending e-mails until you do.

Once you have received 100 or more orders for REPORT #2, YOU CAN RELAX, because the system is already working for you, and the cash will continue to roll in!

THIS IS IMPORTANT TO REMEMBER:

Every time your name is moved down on the list, you are placed in front of a DIFFERENT report. You can KEEP TRACK of your PROGRESS by watching which report people are ordering from you. If you want to generate more income, send another batch of e-mails or continue placing ads and start the whole process again! There is no limit to the income you will generate
from this business!

Before you make your decision as to whether or not you participate in this program. Please answer one question. DO YOU WANT TO CHANGE YOUR LIFE? If the answer is yes, please look at the following facts about this
program:

1. YOU ARE SELLING A PRODUCT WHICH DOES NOT
COST ANYTHING TO PRODUCE!

2. YOU ARE SELLING A PRODUCT WHICH DOES NOT
COST ANYTHING TO SHIP!

3. YOU ARE SELLING A PRODUCT WHICH DOES NOT
COST YOU ANYTHING TO ADVERTISE!

4. YOU ARE UTILIZING THE POWER OF THE INTERNET
AND THE POWER OF MULTI-LEVEL MARKETING TO
DISTRIBUTE YOUR PRODUCT ALL OVER THE WORLD!

5. YOUR ONLY EXPENSES OTHER THAN YOUR
INITIAL $25 INVESTMENT IS YOUR TIME!

6. VIRTUALLY ALL OF THE INCOME YOU GENERATE
FROM THIS PROGRAM IS PURE PROFIT!

ORDER YOUR REPORTS TODAY AND GET STARTED ON YOUR ROAD TO FINANCIAL FREEDOM!

NOW IS THE TIME FOR YOUR TURN

DECISIVE ACTION YIELDS POWERFUL RESULTS

PLEASE NOTE: If you need help with starting a business, registering a business name, learning how income tax is handled, etc., contact your local office of the Small Business Administration (a Federal agency) 1-(800)827-5722 for free help and answers to questions. Also, the

Internal Revenue Service offers free help via telephone and free
seminars about business tax requirements. Your earnings and results are
highly
dependant on your activities and advertising. This letter constitutes no

guarantees stated nor implied. In the event that it is determined that
this letter constitutes a guarantee of any kind, that guarantee is now
void. Any
testimonials or amounts of earnings listed in this letter may be factual

Icom IC-W32A 144/440 MHz Dual Band Handheld

Advanced Operations Have Never Been Easier!

"With its five big watts and a plethora of features, the IC-W32A provides just about everything you could possibly need in an H-T. Best of all, perhaps, the IC-W32A makes a serious effort to take some of the pain out of using a small, complex piece of technology" -- QST, July 1997

- Dimensions: 2.25 (W), 5.5 (H), 1.4 (D), 16 oz
- 5 Watts of power @ 13.5 V
- 200 memory channels
- 8 character alphanumeric memory channel identification, keypad entry
- Backlit display and keypad
- ICOM rugged! Meets MIL SPEC C/D/E for shock and vibration
- Handheld to handheld cloning capability or PC programming capability
- Independent band controls for tuning and volume
- VHF/UHF exchange function

More detailed IC-W32A specifications and options at
http://www.icomamerica.com/amateur/dualhand/

Asking CAN$399

Licensed Amateur Radio Operators only please!

All Electronics and places like DigiKey routinely sell those
little switches. While I don't know EXACTLY what switch is
in the IC-2A, you might be able to kludge something in.

If you do buy generic, be aware that some of those switches
DO NOT short, they just go from high resistance to moderate
resistance. This is actually ok in most matix applications.

I had to repair a radio in an old Dodge Caravan that had a
soft drink splash on it, and it took out about 5 or so of the
buttons. They aren't hard to replace, but if you can't get
exact, get one that is not as 'TALL' as the original. You can
always space it up, you can't always easily cut it down.

I'd have to actually look at my IC-3AT to see what the switch
is.

Whoa there Marcus. If you want to classify ham radio licenses, the Extra is ELITE which has nothing to do with the ham himself or herself. You deny it's SUPPOSED to be nothing less than the Rolls Royce of amateur radio even though the driver might be a dingbat? If it weren't the elite ticket, then why did hams USED to study like crazy for it and murder themselves as I did to master 20 wpm? It USED to mean something noble, Mark, and you know it. Now it's the reward for INCOMPETENCE, a function of ham illiteracy. The lazy man's way out. Look at a guy like KE9RY. Tom could have sat back and gotten a WELFARE EXTRA but he refused to go the chintzy route. And I venture to guess we have a lot of Toms out there who are NOT lazy slobs, wanting everything GIVEN to them. THOSE are the guys who deserve respect EVEN IF THEY FAILED before April 15th. That's right; even if they failed! They are more of a ham than the shiftless lazy bums who purposely waited until the April handout began. What has happened to ham radio is reflected by your post which says that the Extra ticket is NOT the pinnacle of ham radio but rather a so-so piece of paper. Are you sure you want any testing at all to get a ticket? Sounds to me like you're a palms up ham...gimme..gimme..gimme and to hell with proficiency in any phase of anything.

Let's say the experts state that we are 150,000 short of qualified physicians in this nation. And so the medical schools conspire with the experts to lower their standards in order to put into the field what's needed. What would happen? We the people would be menaced. The infrastrucure of the entire medical profession would be injured because gullible but naive very ill individuals would seek out incompetents and die because of it. You see the analogy? Standards must NEVER be compromised for the sake of numbers and that's what's happened to the greatest hobby/service in the world.

Mark Morgan,

You must realize that now you're wading into the question of jurisdiction. Though I haven't studied the legal tilting, I know that the federal government had the jurisdiction to do what it did.

There are often cases of parallel jurisdiction, called pendant jurisdiction. We just don't know how deep the duties of federal authorities were without a legal scholar. I'm certain there is a huge legal history underpinning the episode.

I agree. No amp is needed, my first year I got into the packet
station with a meager 5w through an HT whip but got a mobile rig and
ringo ranger after that. 50W is PLENTY even though some guys use much
more. If you use a beam 5-10w would probably do you just fine.

I don't have a problem with ANY level of testing for the Amateur Licence. I was professionally trained in Electronics and Morse. There is nothing "elite" about sitting for an exam that has always been below my professional standards.

I am also aware some in the status brigade who were also professionally trained, and this makes a mockery of all the nonsense about striving and achieving. There is NO achievement is passing a test when you have already been trained to a higher standard. As there is no requirement to declare whether you have had previous training, it is only possible to judge whether a person "strived and achieved" to pass the exam by getting to know them personally.

> Let's say the experts state that we are 150,000 short of qualified

the
> world.

I'm astounded that you equate a profession with a HOBBY! If you want to do this, I'm happy that you scrap the Amateur exams (and current licences) and only give licences to those who have passed REAL tests (college level exams) and haved passed Morse exams at commercial

standards (maritime colleges, etc).

It has been my experience that often people who hide behind "status" do so because they have nothing else to commend themselves. The most brilliant scientists I have dealt with have been the least status conscious people I know. Why? Because they don't have to go around trying to convince people they have status, people GIVE them status without question. Idiot scientists with PHDs don't get respect, even though they have an impressive piece of paper.

All this status nonsense is nothing more than some people wanting to be big fish in a small pond. This is obvious be the fact that these status freaks are unprepared to judge the people they meet on the merits of each person, rather than applying a blanket prejudice.

The people coming in on the new licence have no choice as to how they are tested and hence even the potential "elite of yesteryear" will enter the same way. To treat them as one would treat an ignorant imbecile shows that shallow self pity for perceived status lost, rather than concern for standards, is the motivating force.

Standards are a long term issue and Amateurs who do not attempt to assist newcomers purely on prejudice contribute more to declining standards than any single exam. Such actions deny those newcomers access to the wisdom and experience of the "elite". Sharing knowledge and experience is what lifts standards. An exam lasts a couple of hours, while Amateur Radio lasts a lifetime.

Yes, the licence IS just a piece of paper. REAL standards rest within the Amateurs who use the bands. Standards relies on the current knowledge and experience of the complete Amateur fraternity. The maintenance of standards relies on the ability of individual Amateurs to share their experience. It does NOT rely on a piece of paper that tells of a test that may have been passed 30~40 years ago on obsolete technology and possibly long forgotten.

Mark.

If a group of amateurs starts a club or organization based upon one's choice
of sexual orientation or religion (as both are a choice); then why is it
wrong for other groups to start? Why is it that some people seem to think
that one group of amateurs are trying to exclude people who have made a
different choice? I did not see anything in the homosexual amateur radio
groups that excluded heterosexuals; nor did I see anything in the
heterosexual groups that excluded homosexuals. No one has said that you
cannot be an amateur radio operator because of the choices you have made for
your religion or your sexual orientation. Please do not read something into
it because it does not exist.

Hmmm . . .the law was passed by the House and Senate, then signed by Jimmy Carter. While many of the aforementioned had serious judgement challengeges, nobody has ever claimed that they were illiterate.

Thus, for a section of a law to be "accidentally omitted" is a pretty far-out claim.

However, that point is moot. Any law is as the law was signed.

Rob, by all means go for it. Ham radio is many things to many people and Vanity Calls are too. I have seen many odd calls that would mean nothing to me but had a definite meaning to them. Since you will be the one using the call, and assuming it isn't offensive, it should be your choice. Remember, though, that what you might be doing in ham radio in later years might change. If you get a long call (2x3) with lousy phoentics, it might be a paion when chasing DX.

Best of luck es 73 de Kenn W5KAP

Never said that but Florida IS empowered to deal with child
guardianship and other domsetic arrangents of person within the State
of Florida. The INS had no bussness in the matter until the Sate
decided who was Elain's legal guardian. indeed after that I doubt the
INS would need to more than mimaly consulted. If the uncle won cousty
then clear US law would say the Elain has right to asylum in the US,
per the unlces request. if his father won then the INS would merely be
involed in arrnaging Elains return to Cuba
>

Not a bad search engine but a fialiure of either Logic or
knowledge that the US Federal Goverment is Made up of the National

Govt based in DC and the several States each of which has duties and
powers to excercise. Givent that the US Constitution does not give the
National Govt the power to decide Cjild coutay case that power is
reseved by the 10 amd to the States, in this case Florida.

I know that increasingly asking that the Highest law in the
land be obeyed is getting to be too much to ask but...

That Cuba choose to make this a politcal football has nothing
to do with US law. So in this case the US Govt has given the Father
rights in our coutry that are greater than the rights of our own
citizens. IF I had childern was boating off florida with MY son
fludered and was picked up taken to florida and my ex wife wanted to
claim my son over the objections of the my bother the matter of who
has the right and duty to speak for my son would decided by florida.
This is supposed to be a Govt of LAWS not MEN, the law did not change
becuase Fidel Castro spoke or did he aquire legistive power in the US
while I was not looking

Well, "General," if you actually knew anything about firearms, you would know that "machine gun" is the blanket definition for automatic weapons below 15mm caliber.

In fact, there is a Federal definition, which essentially is "any firearm capable of firing more than one round per actuation of the trigger."

And if you knew anything about the MP-5K, you would know that the name is the abbreviation for "Machine Pistole, Model 5, Kurz" (in English, "Submachinegun Model 5, Short").

Perhaps next time you would prefer not to broadcast your ignorance to the world, "General."

BTW, what are you a general of, that you are so proud of the designation?

If you are serious about this, and not just sarcastic, there is a wealth of information out there on this, and legal precedents going back decades.

I would suggest that you start with the State Dept report, at the URL I gave you earlier. Newsmax has links to columns by Dershowitz and Tribe (both "flaming" liberals) concerning the issue, which is the reason you haven't seen Hillary out there claiming that the only opposition to the Elian assault was coming from the "Vast, Right-Wing Conspiracy."

Nice dodge.

The topic is your assertion that the discontinuation of SA is a threat to national security. For it to be a threat, there must be no simple, cost-effective way for this nation's enemies to circumvent the SA stutter. This has been proven not to be the case.

As I said, any terr who could put GPS to work would have no problem getting SA-proof GPS equipment. It's like so-called "gun control" -- SA only affects people who aren't going to put GPS to an evil use.

Oh, well, that explains a LOT! ;)

I was referring not to robot-mode accuracy, but nav-suitable accuracy.

But, again, the point is moot. The only uses that a terr could put GPS
to would absorb a 16m inaccuracy without flinching.

Try http://www.homingin.com
This is a good starting point for DF links. You should get the book
"Transmitter Hunting & Radio Direction Finding" too.

As far as Riley goes, your report will be like farting in the wind. The
FCC doesn't care about amateur radio anymore. If the FCC cared, they would
have had a different restructuring plan.

I haven't seen any change in the FCC enforcement actions since the
restructuring was announced. I see no evidence that the FCC doesn't care
about Amateur Radio. Quite the contrary; the amount of staff time they have
invested into restructuring and enforcement has been considerable.

Well I guess Now I know who is posting the General morgan
Posting. But as I understand the the matter their are important
differences mostly to do with fees and enforcement. Interesting How
you claim that a hypothecal postion is the future of ham radio

But Indeed assuming your are right what is it about a pretend
test as so many of you put that seems to keep order on the VHF bands
by and large. If that element could be understood and isoloated and
used then ARS licensing could likely be vastly improved

>What you are apparently ignorant of is one of the reasons this upgrade occurred is the military now has the means of selectively limiting the accuracy of GPS in different areas of the world as security needs require. It can be set to be perfectly accurate in North America at the same time meaurements can be completely skewed in the Far East.<

Who cares about the Far East...?!?! Let them blow each other to Kingdom Come.

It >>IS<< North America we need to worry about, unfortunately. Most low altitude, high spped threats would not be seen on most domestic radar systems, and even those that might see them, it would be civilian air traffic controllers that would see them, not military intercept operators.

In the time it would take to see, identify and determine the track of a bogey, chances are it would already be on target. And even if a civilian controller DID recognize it as a threat, they still need to communicate that to defense personnel.

Today's Chattanooga Free Press carried a wire service item on how woefully poor the Air Force's readiness is. Do you ALSO expect them to be able to launch a defensive air strike against an incomming threat in the US?

And it does not need to be a fast mover, either.

Sure...call it a Chicken Little response, but until August of 1990, we never thought we would REALLY fight in another theater war, either.

Slick Willy getting his licks in till the last.

Steve

I know of No group BTW of Homosexaul operators in the first
place, let alone one that excludes heterosexuals

>heterosexual groups that excluded homosexuals. No one has said that you
>cannot be an amateur radio operator because of the choices you have made for
>your religion or your sexual orientation. Please do not read something into
>it because it does not exist.

Your advice not to read something inot because it does not
exist is something you should have applied before making this post

OTH your statement that no one has has said I should be
allowed and ARS based on BOTH my religion and and upon my sexaul
orientation has indeed happened in this NG and is done with regularity
by readers of this group sending me email to that effect I truely wish
your statement was correct. Iam not OTH saying that anyone in this
thread has done so, merely in the ARS at large and In this NG as a
whole

The only problem with that is that Elian *WASN'T* a US citizen and
most certainly WASN'T a legal *resident* of Florida. It's *OUT* of
Florida's hands and into the INS.

It's *legal* for one parent to flee their native country, take the
children with them and set up permanent residence in another country
without the consent of the other parent ??? You might tell me which

country that's *legal* in as it's not legal in the US.

> That Cuba choose to make this a politcal football has nothing
>to do with US law.

Bullshit. The US has spent many hours and many dollars *trying* to get
children back from foreign nations when one parent unlawfully flees
with them. I watched a lengthy segment on one of the news commentaries
last year on that very subject.

>So in this case the US Govt has given the Father
>rights in our coutry that are greater than the rights of our own
>citizens. IF I had childern was boating off florida with MY son
>fludered and was picked up taken to florida and my ex wife wanted to

>This is supposed to be a Govt of LAWS not MEN, the law did not change
>becuase Fidel Castro spoke or did he aquire legistive power in the US
>while I was not looking

Suppose the mother had been (for whatever reason) fleeing Canada by
swimming across the Detroit River to Michigan. She drowns and the son
is rescued and brought to shore. Do you _honestly_ think the State of
Michigan would try and hold 'custody' hearings in some 'Family Court'
or would the kid go _back_ to Canada in a heartbeat ?? Now then,
should _we_ change/ignore and subvert the laws just because none of us
happen to like that SOB Castro ?

Or by playing little games with the *law* just because we dislike
that SOB does that drag *ALL* of us and our country down to that
SOB's Level ?

>However, that point is moot. Any law is as the law was signed.

Which is open to *interpretation* and decisions with respect to
Constitutionality which is what our Supreme Court and others spend
large amounts of time doing.

Again I disagree I think however a huge set of legal history
is likel to made either now or as this case becomes precedent. I have
never heard of the US Govt interenving in a child cousty case not
involving active duty members of the Armed Forces

None of you points while being at least argueble over turn my
orginal statment that the US Govet had the choice to simply stay out
of it long near the begining. Indeed IMO that decision had the
cponsences of making this such a damaging circus for Ealin His father,
his uncle the Cuaban Amercian Comunity, the City of Miami, the State
of Florida, the Govt of the US and of Cuba were so obvious that Reno
should have choosen to stay out of and should have know to do so,
rather like anyone that ever met Koresh would have known the only
outcome of an armed raid was a lot of death, while the sheriff had
been able to serve serve another warrant days earlier. For Waco I
adknowledge REno inheriting a bad sence and making the best of it, bad
though it was. Her I have to question her judgement in steping into it
at all several months ago. What could have been to improve things NOW
was and remains unclear to me. I am gald it did not go worse than it
did but it could have, but it was clear that Reno et al had invested
too much politcal capital to back of it.

A Bad sence all round

Source record: 111959

A lot of accusations and insinuations there kevy but no facts, evidence or proof. Do you really expect people to believe you?
Some of what I read, and I didn't read it all, in KJI's letter are facts. SAG does call the people not in the libnet trogladytes or what have you. YOU and the some of the NET MEMBERS are not innocent of wrong doing. Which is how you are trying to present it.
Also I noticed that you've taken the time to eliminate the "addressee(s)" that were in KJI's letter. Something to hide. Why even post it in the NG? It was sent to SAG and others "personally". I suppose that you just want to start some trouble.
Well, anyway everyone knows what you're all about. when you make your accusations and insinuations you should be more specific. Of course you would rather propagandize than cut to the chase.
I also wonder why you had to answer for the other post. Certainly curious.
Also if the last time KJI was checked into the "So Called" net was in 94, I think it's about time to wake up Kevin, the war is over, KJI should be allowed to check into the net and let "EVERYONE" see his actions of today.
Not something that YOU claim happened 6 years ago. Grow Up. Your like the lost Japanese soldier, not knowing that the war is over, he still fights on. He should be checked in (IMHO), he has not, despite your lies, been jamming the net. Let people see how he "contributes" or detracts from the net. Are you sure that the 6 year figure you gave isn't your age?

Wrong he is a legal resident of the US, in this case Florida,
the monetn he arived by the terms of US law, All Cubans have this
status. Now strctly speaking the Coasties slipped up, since he was
picked up at SEA he should have taken to Cuba. not sure why that did
not happen. Ealin has the RIGHT to asylum, and residenciy to mement he
he arrives, that is the law as written. The matter is supposed to be
automatic, and would have been if the Clinton admistration had not
left matters alone.

Yes it is legal for her to do so in the case of leaving Cuba,
US law says so wether it shoudl or not is another matter

It would be a violation of US law to take a kid out of the US
that way in which we would have to try and exprdatite a corse in this
case (the late mother) but that does not afect the status of the kids
at all. I suspect that leaving Cuba that way is ilegal, but do we send
people back to Cuba once they reach the US for this "Crime"? Hell no!!

I wonder would you be calling for Elians return if he and His
mother made it to the US
>
>
>
>>
>>>son, unknown to his *father*, dies in the process of getting to this

>Bullshit. The US has spent many hours and many dollars *trying* to get
>children back from foreign nations when one parent unlawfully flees
>with them. I watched a lengthy segment on one of the news commentaries
>last year on that very subject.

And what the US chooses to do in those case has little to do
with the matter. In Nation with which we have a treaty gornering the
matter I supect we get what the treaty calls for in time but we have
no treaty relations with Cuba, we do not reconize the Cuban Govt,
therefore legaly what Cuba wants says and threatens has no bearing
under US law.

In addition I have also seen a lengthy piece on the issue you
mention and I have never seemn the US deny that the perant accusing
the other did not have to appear in the coruts of the other nation.
something his father has refused to do, and something Cuba refuses to
do.

Allowing Cuba to ditate US policy in this matter is unlawfull
and harmfull to the interest of the US

>

>happen to like that SOB Castro ?

I don't know about Michcan ontario, but in the case a boat
sinking near seatle the kid winding up in Vancover there would be a
quick hearing on the matter in Canada going the other way. Indeed I
fully believe that if the Father had agreed to appear inc ourt in
court he would have been given the child quickly and without much fuss
and together they would have gone back to Cuba, and this would be long
since over and done with.

We should NOT subvert our laws to suit Castro which we have
done.
>
> Or by playing little games with the *law* just because we dislike

Yeah and "The English Patient" won the Oscar for Best Picture and it was horrible. So much for reviews and box office. "Frequency" will be on video really soon because it'll drop from #3 to 103 in a week.

I apologize to the extent I misposted, assuming prejudice where there may very well be none. As to the incident, I'd like a full account of what actually happened before speaking out.

You see, being part and parcel of tortured Jewish history, I see all the good for which Israel stands: carving productive farmlands out of sand, a democratic country on a par with the U.S., one whose survival has been challenged again and again by overwhelming odds, a country whose capital can be reached by air almost before detection, one whose leaders carry the heavy burden of life and death, one which saved the U.S. from huge potential losses by taking out Iraq's nuclear power plant before we sensed the threat, one which wants to live in peace and, one which built for survivors from the ashes of World War II a place of refuge they can call home. Etc., Etc.

Ideally, I believe all of humankind is entitled to these opportunities.

Stu,
First understand that 'grounding' is broken down in to two areas, 'electrical' ground, and 'RF' ground. A good 'electrical' ground is never a bad idea. An 'RF' ground from the second floor is almost impossible to do for multi-band operation. A single band, sure. Make the ground cable an even number of 1/4 wave lengths long. For more than one band, that gets a bit complicated. What length thats an even number of 1/4 waves on one band, will be too 'close' to an odd number of 1/4 waves on another, and odd numbers of 1/4 wave lengths never make it to ground. You can always move??

The Iraqis had topographical maps when they targeted their old Chinese "silkworm" missiles on Israel, but enjoyed only what can be called "piss-poor" accuracy. There was no way to let those missiles know if they were off course, and thus no way to obtain decent accuracy. They did little better than the Germans did with their V2 rockets, for that reason.

Now, every two-bit terrorist has a cheap 'n easy way to target missiles with highly satisfactory accuracy.

Sorry to hear that you are too ignorant to see the national security issues involved in handing over what amounts to a cheap, accurate missile guidance system to every terrorist on the planet. - Why did you think GPS was deliberately made useless for rapidly traveling vehicles in the first place? Just for kicks?

Try popping your head out and taking a look around at the real world, now and then.

Wow - did they have toilets, cars, houses, bananas, stereos, desks,
curtains,
telephones, chairs, pencils, hats, insects, paper, TV's, roofs and tomatos
too?

And did they have telephones, pants, stones, cigarettes, antennas, water,
PCMCIA-slots, crowbars or dogs perhaps - did they use it for their SCUD's?

Why don't You stop you shitty comments, Bozo - You obviously don't know
what you're talking about!

I love it when ignorant people start yelling about how people should
"take a look around now and then."

Hellllloooooo!!! When was GPS made deliberately useless for rapidly
travelling vehicles? Do you read? Do you have any idea how many
airplanes are flying around with GPS? Not just Cessna 172s, real jets,
like fighters, for example.

Run out to the clue store and see if you can still get one.

It looks as though we've reached our solar peak around Jan./Feb. as we continue to spiral downward. Sunspot numbers may fall below 100 for the first time in about a year in the next couple of days and the flares are on the increase.(Which is typical for the decline side of the cycle.)

For all the hype about this peak, it looks as if its going to be a dog. I was able to participate in only one F2 opening on six this past winter. Whoopie.

Interesting observation, that whites are now a minority in Miami. As such, I assume they qualify for the usual assortment of benefits which racial minorities have become entitled to in our country. I'm sure whites in Miami can take advantage of hiring quotas, anti-discrimination laws, subsidized mortgages, minority business incentives, etc.

Or are these "privileges" only reserved for "certain" minorities?

He didn't become a citizen of this country. But h doesn't have to be. He was afforded certain rights when the court acknowledged the complaint in his name and recognized his counsel in the 11th District Court ruling. The question of parental rights was not the issue. The issue was the request for asylum. The father's rights were not rescinded. But once the matter fell into the courts the decision rests with the courts. And all other matters wait until the court decides in the issues before it. Whether the boy was to be surrendered to his father to return to Cuba became one of those issues to be decided by the court.

I've noticed that the Jews have no sense of humor when it comes to National Socialism, either. Remember the screaming about Reagan speaking in the Bitburg cemetery? Out of hundreds upon hundreds of graves, the Jews went ballistic because FOUR of those graves were of SS troopers.

The Washington Post was on their side.

Ignored in your whole argument is the question of what is best for ELIAN?

Why don't you ask that nun why she changed her mind about sending him back, after meeting his grandmothers? The day before the grandmothers arrived, she said that her whole reason for getting involved was to "speed Elian on his way home." Since that meeting, her only statements have been "Elian should stay in the US."

Why do you ignore Alan Dershowitz' comments detailing the illegality of the raid?

Why do you ignore the Federal negotiator's comments that Elian's relatives were negotiating in good faith?

If Elian's mother had died escaping over the Berlin Wall, would you be so eager to send him back to East Germany?

3444. To ground or not to ground???

Greetings,

I heard some folks say it is a must to ground your equipment, (xmtr/PS etc) and some say do not bother. What is the best practice. Especially if the shack is on the second floor, (needing the shortest possible grounding wire). Use a long rod/strap attach all equipment to it. Then a grounding strap/wire to the grounding rod two stories down? Thanks in advance for all help. 73, Stuart KB8VIY

Sorry, Charles, GPS has never been "useless for rapidly traveling vehicles." Some MANUFACTURERS, most notably Garmin, produce a line of handheld units which go inactive at about 100kts, but this is a corporate decision, intended to reduce their liability by forcing aviation users to by the (more expensive) FAA-approved line.

Any terrorist organization which would be able to make use of high-speed GPS tracking is likely to be able to pay an extra $200 for the better GPS system (assuming that they don't just steal one out of some guy's Cessna).

BTW, the aviation GPS isn't affected by "stutter mode" (SA) anyway . . .

I agree with John - you DON'T KNOW WHAT YOU ARE TALKING ABOUT, and should SHUTUP! Chinese Silkworms technology was used by Iran, not Iraq. Iraq used Russian Scud technology, which was very close to V2 technology. It was difficult enough for them to hit Israel, let alone Jerusalem or Tel-Aviv. Improved GPS technology has NOTHING TO DO WITH THIS! You don't think that they could have just bought more accurate information from Russia anyway? You are STUPID!

And you are that same jerk that is always trying to block high-speed digital communications progress too. You seem to be an old PBBS operator who wants to bring back the control-freak "glory days" of packet radio. You are a total jerk, who DOESN'T KNOW WHAT YOU ARE TALKING ABOUT, and should shutup!

> Sorry to hear that you are too ignorant to see the national security

> Just for kicks?

No, because of control/power freaks like you, who wanted to hold on to their empires. Now if we can just get the NIMA bastards to release Level 1 DTED, and some decent CADRG maps!. Level 0 DTED is crap! Now, we can get USGS topo maps over the Internet for free for the entire US - the only place we can't get data over the Internet is for OTHER contries. What does THAT have to do with national security, huh? It is ONLY a control/power freak issue! They STILL would have level 2 DTED

(and I'm sure MUCH more detailed than that).

> Try popping your head out and taking a look around at the real world,
now
> and then.

What really pisses me off is how much they hyped that Space Shuttle
mission that made more accurate topo maps of the Earth - they made it
seem like it was going to benefit mankind. Hah! It was only to
further entrench their power pyramids. What a bunch of dickheads! And
how IGNORANT are the people - like you!

Yes, Mr. Burkhart. WA9KJI was checked into the Liberty Net many times prior to the beginning of his intense jamming and disruption efforts in 1992.

And, as you said, there were efforts made to allow him back in, up until about 1994, which he repaid by further jamming, obscenities, disruption, and false personal allegations of the most horrific nature.

So it's quite understandable that the cretin is _persona non grata_ on the Net and among Net regulars, as are a few of his most egregious allies in his inhuman "cause."

To see a recent sample of the mental processes of this obsessed individual, one only needs to read the email he sent a few days ago to a large number of persons, and which I quote below:

---end quoted message---

Comment on the above is superfluous.

One of WA9KJI's major accomplices in his jamming and destructive work is WB0CXJ, who has published a web page at

http://www.angelfire.com/ms/vicvtorious/

the content of which is only very slightly more coherent than WA9KJI's email.

The interesting thing to me about all this is that there are a few of WA9KJI's allies who are clearly not as unbalanced or obsessed as he, who remain mostly in the background, and who are quite likely not unbalanced at all. They exploit those, like KJI, who have the qualities of recklessness, credulousness, and a limited IQ, and who apparently possess a great deal of free time. It is the patsies who have their licenses on the line because of their manifold illegal acts, while the sly manipulator guides their actions from a safe distance.

With all good wishes,

Kevin, WB4AIO.

Why is it that any time anyone points out that money and media are controlled in the USA by Jews, he's automatically pegged as anti-semitic? Is it so necessary to try to mask this fact? I was merely stating a fact of life in the United States. It is how we account for the extraordinary foreign aid sent to Israel each day.....more than any other country on the planet.

It has nothing to do with the religion, actually. I worked for Jews for years. I hung the masoosala (my spelling is awful) in the front door of their business. I've visited Israel, twice, over the last 20 years. I've also lived in Arabian countries who have good reason to fear the atomic bombs of the Israeli state. I lived in Iran, an arch-enemy of the Jewish state, for nearly 2 years. I've lived and worked in many places in the Middle East. I'm hardly anti-semitic. I have friends of many faiths, cults, etc.....

I also can't forget the Americans aboard USS Liberty who died in 1967 when the Israeli military tried to sink the ship and kill our sailors. No, I won't forget just because they control the money and media in the country, either. They shot directly at MY flag....

Larry....

That is utterly incorrect. The FAA has been spending zillions of dollars
to devolop the very correction systems discussed earlier in this thread
to allow more precision in GPS approach procedures.

Praetorian,

I see this complaint all the time about eBay. There is a very simple solution to your gripe: Just look at items that are about to expire. If you don't like the bid price at that point pass, else make a bid and in a short time, maybe even minutes you'll know if you won. Actually a faster response time than contacting most NG sellers. Also, eBay has a better search facility.

73,

Casey

3458. Morse exercises No.21

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-03 00:00:00 UTC
From: DTC - Frank Schmitte <dtc@muenster.de>
Message-ID: <8epm5i$m96$1@news.citykom.de>
Source record: 112022
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr21_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr21_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr21_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

73 es agbp de Frank (DL1YDL), DL-CW-C #030
Editor of the DTC-Web-Site.

The word is 'moot' by the way.
It was in 1978, I believe, I"m sure someone will correct me, that
Congress passed a law, that said that for Cuban refugees who make
landfall, who make it to US soil, the request for political asylum
is assumed. No age restrictions, no status restrictions. ALL Cuban
refugees who make it to US soil. That means that the request for
asylum doesn't need to be formally made. And the age of the refugee
is irrelevant. For the record, though a formal request for asylum
was also filed in his name and signed by Elian by the family.

In fact, all of the 12-channel Garmin handhelds, which means anything
that has come out in the past 3 years or more, do not have this limit.
They still have a speed limit of about 1000 knots, but that applies
to all civilian GPS receivers.

Not really , the interpretations I've read say that the absence of
mention of age limits was an accidental *omission* not a designated
part of the law.

> For the record, though a formal request for asylum
>was also filed in his name and signed by Elian by the family.

Which is another laugher. The request was filed in English and
according to Elian's father and his attorney the *child* can't read
Spanish let alone English. But hey a 6 year old child knows all about
requests for asylum, leaving his *father*, his native country and all
that would entail.

But their problems weren't GPS related, and could have just as easily been overcome by mounting a camera on the missles. Over the years, various arms dealers have managed to export a sufficient number of the smart missiles.

GPS isn't the only method that can be used to locate a distant target. That's why removing the intentional error factor doesn't make a difference.

> the first license for the Novice and the Technician cost?

The first license effectively "costs" $6.65, since there is a fee charged for testing - but the fee is charged regardless of whether the test is passed or not. Retests may charge another $6.65 as each element is re-attempted (ARRL's policy) or be free, or not allowed at the same sesson. Other groups may charge less ($4.00 for GLAARG-VEC groups), but not above $6.69 for 2000.

> that said the test are free. Has anyone taking any of the test recently
> that could tell me if you paid for them, which test you took and how
> much it cost?

The ARRL used to administer elements 1A and 2 for free. This changed on April 15th.

2x1 and 1x2 calls that aren't taken are available.

A$#$ is allowed, but only AA-AL (with AH and AL reserved for Hawaii and Alaska)
A#$$ is not allowed. A, followed by a digit or M-Z, is assigned to other
countries. THe USA does not have all of the "A" calls like it does with K, N,
or W.

All SEQUENTIAL extra class calls are 2x2, starting with A.

Tsk, tsk. How quickly you have forgotten what you wrote. You accused me
of wanting something for nothing from the new exams. I can't help if you
got it so wrong and I have nothing to gain from it. If you don't like
your baseless allegations being refuted, don't make them.

As you will recall, you were saying that you did not respect the new
people with THEIR perceived low standards. How quickly you change when
you perceive the subject of standards being applied to you. You feel
that I have insulted you because you did what was REQUIRED of you, yet
you have no problem doing that to others.

My point was that you CANNOT judge effort and determination by the
licence. It would seem that you support that view.

> >I am also aware some in the status brigade who were also
professionally

differentiate
> between on paper or being let out to do it.>>>

Listen to yourself! You complain that I denigrate your efforts - given that it was in response you degingration of others, the word hyprocrite is up there in flashing lights.

What training do I have? Ok, I have an Associate Diploma in Electronics, a degree in Applied Science and am completing a Masters in Maintenance Management. Went to maritime college for courses on HF operations.

What have I done with it? I've been a Technical Officer with a couple of Antarctic expeditions and a remote island weather station, a college lecturer, a communications system installer, an MF, HF, VHF transmiiter/ receiver station maintainer, a computer programmer, worked on developing HF radar, am currently developing a diagnostic system for a combined RF and digital system. And in the hobby area, I'm currently providing systems engineering support for the development of two satellites being developed by students at two differnt universities.

Oh, just as an aside to your tirade about personal endeavour, I did (and am still doing) most of my studies externally in my own time as I left school when I was 15 (10th Grade). Not really relevant, but as you threw in your personal endeavours, I thought I'd return the favour. ;-)

> do this, I'm happy that you scrap the Amateur exams (and current

or
> "hamological." >>>

Given the way you treat people who are different from you and then go ballistic if the same treatment is returned, I'm not suprised. The "tradition" of Amateur Radio has been change since the beginning of radio. Invoking tradition seems to require a very selective memory.

> so because they have nothing else to commend themselves.>
>
> << had training in electronics as you did but IT DIDN'T STOP ME BECAUSE I
WAS
> WILLING TO WORK FOR THAT TICKET. You confuse status with pride.>>>

When people apply the term "elite" to themselves, I think I've hit the nail right on the head. There is "pride" and there is "Pride". I only see "Pride".

> big fish in a small pond. This is obvious be the fact that these status
> freaks are unprepared to judge the people they meet on the merits of
> each person, rather than applying a blanket prejudice.>
>
> << other words to hell with tradition-to hell with skills-to hell with pride in
> accomplishment. "Wow, that Jimmy Smith fellow is such a nice guy. He helps
> little old ladies across streets even if they don't want to go. And he's a
> great husband and dad and he tithes every Sunday. GIVE THAT MAN AN
> EXTRA!">>>

Whether you personally believe the test is a good one, does not change the person who followed the rules and sat for it. Why take your dissatisfaction at the rules out on someone who is simply following those rules. You do not KNOW that the person even agrees with the rules until you get to know them - you post indicated that would not occur.

> are tested and hence even the potential "elite of yesteryear" will enter
> the same way. To treat them as one would treat an ignorant imbecile
> shows that shallow self pity for perceived status lost, rather than
> concern for standards, is the motivating force.>
>
> << sham rather than the lazies who'll benefit from it. And my intention is NOT
> to make it difficult for them on the air; I absolutely will not do it but I
> still have the right to fume about it

This is quite different to your post about respect. Even your terminology reveals the real truth behind your words.

>And when, as happened yesterday, an
> anonymous moron comes on here to say that he just passed the Extra written
> but can't copy a lick of code, it tells me what a joke is the entire
> restructuring thing. Let's call a spade a spade. Ham radio is being
> threatened by the Internet.

No, Ham radio is mainly being threatened by the intolerance of the incumbents. The internet is, however, a factor, but mainly because it allows people on with a minimum of fuss and lets them learn to their own level. It is also unfettered by "tradition". If people want to explore some aspect of the Internet, they don't have anyone telling them that they are worhtless pieces of shit who haven't done the hard yards.

> Our spectra is being threatened by foreign

> board, "Everyone play ostrich. Nothing's wrong.">>>

I only have to read this NG and listen to the bands to know what is wrong. I have seen very little wrong with the bands, except the way that some amateurs treat their fellow Amateurs. I have yet to see any long term serious problem caused by technical problems, while the attitude of some Amateurs to others is a constant source of embarassment to the hobby. The problem is with the people's attitudes, rather than their technical standards.

I note that you cut out all of the sections of my post which dealt with standards being associated with what the people are doing now, not locked in a piece of paper they may have received 30 years ago. What is not addressed is often more informative than what is addressed.

Mark.

> lent utterly no credibility to you position.

My point has been throughout this matter the we should stop
looking at the minutiae, where the tortured arguments lie, and start
by taking a step back and asking 'what's wrong with this picture.'
The tendency here of late, has been to start by parsing words,
waiving often irrelevant details as specificity, while ignoring the
larger issues in front of us. Put another way, I love looking at
trees, I'll be the first to examine the veins in the leaves, but not
before I have looked at the forest as a whole.

Tom Peters calls that a 'blinding flash of the obvious.'

As for my piece, I'm not sure to which you refer, so I can't
comment on your assessment. You may have missed one of the
exchanges.

Apparently it hasn't been a significant loss.

This is not a political statement but one of netiquette: The next person who says "get a life" on this newsgroup is hereby sentenced to 50 lashes with a wet noodle. Such phrases have been prohibited on usenet since 1995 when it was discovered that AOLers had limited capacity to infiltrate the usenet and say, interminably, "get a life".

I agree also. I worked MIR twice in 96...in November with my old call, then again in December with my present call.

All I used both times was my 50w mobile rig in the house and the ground plane.

I WOULD suggest if you are going to try to work spaceborne stations with any regularity that you consider a "turnstile" antenna. It's cross-polarized and reduces fading as the target travels and spins.

Are you saying that WA9KJI and W9ART actually intentionally interfere with The Great Liberty Net?

Now the last few times I listened, they announced at 10pm EDT they were releasing the frequency for use by the regularly scheduled net.

I think it was 2 weeks ago that the net met on 3947, even though 3950 had been released by the "friendlies". Once it was clear that the net was going to remain on 3947, the "friendlies" resumed talking on 3950.

It's a lot quieter now. And there are other jammers who have not yet been positively identified. There's a music jammer and the Doofus jammer.

Do NOT say that Mr. Hollingsworth has not made an effort to clean things up. And things are somewhat quieter lately. Some weeks are exceptions, but as a rule, it's quieter during net time.

True, W1WCR does indeed allow dissenting viewpoints. I've heard him do it SEVERAL times. I'd like to see things put to the test. I'd like to see him let WA9KJI and W9ART check in once. Just to see what happened. Who knows, they might make fine "netters".

What would be the harm in giving it just one try? If it didn't work out, then ban them from the net for life.

The respected Atlanta Constitution advocated separation of the races in times past too.

The rush of history subsumes prior positions too. Notwithstanding, Pravda today has SOME even-handed news, filtered, of course, through Russian culture.

My point is: Because times change, as do positions, no reason arises to blanketly reject the written word. Jeff Herman is right when he wrote: Carefully weigh the evidence, then judge the credibility of the source.

Jeff,

Again, thanks for weighing in on considering the evidence carefully. Here, here!

These are basically fine people. Being "other" in the midst of the Hispanic majority, I am thrilled at the renewed family and work ethic. Miami has indeed made progress in almost every arena.

That having been said, everyone should realize the hysteria that grips this city of Miami, Florida. The Hispanic community sees every issue as pro or anti Castro. And they have such hatred for being disenfranchised that other important issues are eclipsed. Try talking the Elian episode even with intellectual Americans of Cuban decent and the conversation quickly grows furious.

I'm not maintaining, the Washington Post article of 4/28 is gospel, but I do know that our notion of the First Amendment handed down by the English has become convoluted in Miami: Speak freely if you are anti-Castro, but shut up if you have anything good to say about Castro. I've seen pro-Castro protesters stoned downtown.

The Elian issue, generating opposing views on a national scale, has at last emboldened me to speak. Legion too, beyond hysteria, are memory lapses about the roots of the Cuban revolution.

I got a chance to see it before it was officially released and thought
it was *good* for entertainment. They could have portrayed amateur
radio as some right wing hate monger(s) spewing racial venom on 75
phone or interfering with TV/ Radio reception but it was portrayed in
a _positive_ manner which is a plus. FWIW: I hate to tell 'Doc' this
but I (truthfully) took along a female friend that's suffering from
the early stages of Alzheimer's and she followed the movie just _fine_
, Maybe he should get in for a checkup ? ;-)

Anyone who spends a lot of time around me knows I'm not interested in bandwagons. My position should be clear. The debate over whether Elian is entitled to stay has fallen into the courts. Once there, the wrangling by either side stops until the court decides the resolution of the outstanding questions. Any action one way or the other by either side is wrong.

Whether Elian belongs with his father stopped being the issue as soon as the courts were involved. A cheap ploy? Probably. Most movements toward the courts these days are. But once there, the domain of authority shifts from INS to the courts. That means the Judiciary, not the Executive branch.

By the involvement of Janet Reno, and the President's attorney, with the involvement of Cuban diplomatic corp, the Executive branch became a party to the dispute, along with the father. The 11th District Court of Appeals ruling enjoined the parties from further action until the questions in the dispute were resolved by the courts. The Executive branch, now a party to the dispute, in its actions, flouted the ruling by the Court. That raises the questions of the legality of the incursion.

Claims by Reno, and the INS about weapons, have been disputed by witnesses on the scene. Another question. The news outlets have addressed only the Executive branch position that there were weapons. Claims by Remo and the INS about the violence in Little Havana have been disputed by witnesses on the scene. Still another question. The news outlets have addressed only the Executive branch position that the citizens of Little Havana, and specifically the crowd around the home, were of a violent nature.
Now, Elian, in the hands of the Executive branch, closely guarded, and isolated from his lawyers, (remember in the 11th District ruling he is named as a plaintiff, therefore entitled to counsel), is allowed 100% access by opposing counsel. Clearly a conflict of interest, and a deprivation of what the court

acknowledged are Elian's rights under US law. Several new questions raised there. The only information forthcoming from behind the walls, is coming from opposing counsel, a party to the dispute? And the Executive branch is involved? And this is countenanced by the press?

How does this happen? How does the profession that brought Mike Wallace, Edward R Murrow, and Woodward & Bernstein to stardom simply sit by and watch this?

Now it's revealed that Juan Miguel has direct access to Castro, who took a cell phone call from Juan Miguel, during a rally in Cuba, to announce his support, and what amounts to an impending victory. No one is naive enough to think that that's anything but a PR move, but again, a PR move with full countenance of the mainstream press? And the involvement of the Executive Branch?

Setting aside for a moment the emotionally laden issue of the father and the child's relationship to him, setting aside even the direct involvement of Castro himself, and his own stated intent for the child, which is NOT to live with his father in Cardenas, btw; setting aside these issues, you begin to see a strongly imbalanced presentation of the entire issue to the public eye, with questions germaine to the truth going unasked, by the very people whose job it is to ask questions.
Now, couple this picture with the emerging, and little reported story that Clinton himself, ordered a poll taken to gather public opinion on the subject of a potential raid to retrieve Elian, and with numbers near 80% in favor, ordered Reno to go ahead with the pre dawn raid, in violation of both Clinton's own promise to Senator Gramm, AND Reno's promise to forestall any incursion into the home until at least Monday following Easter, despite the family's concessions to relinquish the boy, not to mention the 11th District court ruling, and STILL NO NEWS QUESTIONING WHY...you see a government that is running amuck, drunk on public opinion, and making a mockery of the law, the courts, and doing it in our name.

Should Elian have been reunited with his father? I don't know. There are conflicting questions about the nature of that relationship that have been unanswered. Does a boy belong with his father? On balance, absolutely. Why is this issue special? Because the laws involving Cuban refugees apply special dispensation to Cuban expatriates on US soil: Reuest for asylum is assumed. Regardless of age. Regardless of status. That's the law. Once the dispute falls into the courts, as this one had, the decision rests with the court. No matter how anyone feels about the boy and his father, the truth will be sorted out there, and a decision based on the best interests of the boy, balanced with compliance with the law will be made.

The Executive branch, as a party to the dispute, was wrong. Not because it reunited the boy with his father, but because it was

illegal to do so, at that time, as the warrants of questionable legitimacy suggest. As the timing of the raid suggests.
The Executive branch, has a long and rich history of abuse of power, dating well beyond this administration. It's still wrong. It's still a violation of the most basic tenets of our laws, the separation of powers, and it sets and maintains a dangerous precedent for the rest of us. But that alone is not what's so alarming.
What's different in this case, is that for the first time in my memory, the press, has rolled over and allowed this kind of abuse of power, and contempt for the law to go un questioned. The press, instead of playing devil's advocate in pursuit of the truth, or loyal opposition in pursuit of the truth, has become a willing ally with the Executive Branch. Which is not unusual in itself, but along the way has stopped asking questions.

The Chicago Tribune is very proud of the claim that it was almost single handedly responsible for bringing Abraham Lincoln to prominence. And was almost single handledly responsible for getting him elected to the Presidency. Taking sides is not a new thing. But the Chicago Tribune also raised serious questions about the Mayor's office during and after the '68 Democratic Convention. The Washington Post brought down a President. Specifically over abuse of power, and illegal activity. And yet, The Washington Post, the Chicago Tribune, how many others have allied with the Executive branch in demonizing both the Gonzalez family, and the residents of Miami, but not questioned the abuse of power in the raid. It is because the adversarial and skeptical nature of the press, and the need for it, that the First Amendment was written. It keeps the Government honest. And prevents the Government from establishing a propaganda arm...state run media. That responsibility, and the almost total lack of public awareness of that largely abrogated responsibility today, makes qustionabl the freedoms that we enjoy in this country.

My objection is less that Elian was snatched, and more that our own government in a show of force, with complicity of the press, targeted and raided ANOTHER US citizen's home. And that armed raids into citizen's homes, and businesses are becoming too easy to justify. Because no one's asking questions. Where is the outrage? Where is the loyal opposition?

Bob, you speak of my general presentation. There's a reason for that. The minutiae are exactly the issues to be decided in the courts. The minutiae are where obfuscation is found, as past performances by this government have demonstrated. But if you take a step backm, let the substantive legal issues in this case be picked apart by the courts; take the larger view before you wade into the hard ethical issues, and see the outstanding questionsm, You see where they're leading us. As individuals. You and me. See the historical parallels as well as the historical differences, and ask

the big question..and DEMAND an answer....What the hell is wrong with this picture?

Bob, you and I may disagree, but you express your disagreement with respect, and composure. It would be wrong not to acknowledge that. Thank you.

I agree. The airwaves belong to all of us, and we have a right
to use them, coupled with the responsiblility to use them
correctly (which aptitude is tested by exams).

It is not a privilege that is some sort of reward for passing a
bizare initiation ceremony... (although Morse testing certainly
is weird)

However, considering that there are many other sources (e.g. printed topographical maps) where the equivalent information can be found, that kind of eliminates the original need for the security classification.

So how come the Puerto Ricans here aren't carrying on about our marshalls clearing our the Vieques protestors as were the Cubans in Miami about Elian? It's because the Puerto Ricans feel American while the Cubans feel Cubans while showing no allegiance to this country but instead using her as a staging area to get back at Castro.

The Clinton years are winding down and in retrospect there was one glaring weakness aside from his incredible disrespect for his own office. VACILLATION.

Does anyone believe that things like Waco, Elian and the Vieques affair could have occurred under the watches of pepperpots Nixon and Reagan or even under quieter Bush? Koresh would have been arrested and taken away LONG before the conflagration happened. Elian would have been given immediate political asylum and the Vieques protestors would have been cleared out days after they squatted.

If decisive action is taken quickly, the necessity of RASH action diminishes-something the Clinton administration forgot about. Things were allowed to fester beyond control and then decisive action turned to what can be described as heartless.

Let's hope the next Prez. zips up and flies right.

You may be right Doc....but I'll tell you this....the Demoncrats have
LOST THE CUBAN VOTE FOREVER. And that includes all their friends.

And for a personal thought.....if this country elects Gore, then it
will prove to me that the people of this country are REALLY STUPID.

Anyone that can support Clintons protege after Waco and now Miami
deserves another 8 years of ripping up the constitution. Well maybe
Gore will keep his affairs out of the public limelite. Thats something
at least.

Wouldn't it be nice if we had someone QUALIFIED to be chief executive
just once? I'm really getting tired of these "beauty contests".

Your a real trip Doc....one post your a card carrying DEMONCRAT, and
then you jump on the Elephant. Talk about vacillation.

Now here is a major point to consider.....When does Castro get froggy? Only when there is a Demoncrat in the presidency.....Bay of Pigs/Cuban missle crises > Kennedy. Criminal boat lift > Carter. Miami > Clinton.

Ain't that amazing? And you know why? Because Nixon, Reagan, Bush would have shoved his bearded butt out the other end of the carribean.

This appeared on the ham radio history email list; thought some of
you would enjoy reading it.
73, Jeff KH6O

Construction of radio equipment in a Japanese POW camp.
By Lieutenant Colonel R. G. Wells
Transcript of a recording by Lieutenant Colonel R GWells, on the
construction of radio equipment whilst in a Japanese Prisoner of War camp
after the fall of Singapoore
It was about the beginning of 1942 when I was aprisoner of war of the
Japanese, when I was ordered to go on a working party which eventually
finished up in the Sankakan in British North Borneo. Two thousand odd of us
were in this work party and it wasn't long before we noticed the absence of
information as to the international situation, what was happening in the
outside world, and the whole camp had a real craving to get news by whatever
means. Escape parties were being organised, but none of these were very
successful. The next thing people turned to was a means of getting some
radio news, and this is where the building of a radio set became an urgent
requirement.
The main thing, of course, was that we didn't have any components and
although we had some contacts outside which later on were helpful in the
building of this receiver, it limited our requirement to a regenerative
receiver as from a superheterodyne receiver and the decision to do that was
borne out by the results.
The high frequency spectrum during that time of the war was fairly quite in
that part of the world and the BBC, we hoped, would be able to be received.
This was aided by the fact that the Japanese in their wisdom called a friend
of mine out one evening to repair their radio set and he took the
opportunity, of course, to switch over to the shortwave bands, with
headphones while doing that, and picked up the BBC successfully. That day
was memorable because it was the day that the BBC broadcast the death of the
Duke of Kent in an aircraft crash. That was the only news we had of the
outside world for something like six months.
The plan was made to begin building the radio, so until we could build
components, there was nothing much we could do. A look at the circuit
diagram of a regenerative receiverindicates a number of capacitors - about
two or three are required -low capacitors to make the oscillating part of
the system work, and infact from memory we needed in the grid circuit at
least one ".01 microfarad" capacitor and there was no chance we could get
this anywhere, or any other components. So we hit upon the idea of taking
some tin foil or aluminum foil from the lining of the tea chest from wich
the Japanese suppled with the rice rations, then by the well known equations
for calculating capacity and the relationship of the surface area and

spacing of the plates, we built a capacitor or, at least, I built a capacitor which according to calculations should have been about ".01 microfarad."
If I could put an aside here, I built a replica of this capacitor some years ago, and it went out to Simpson barracks wherewe had some friends in thetesting laboratory, and with great excitement the Warrant Officer concerned said, "We will see how good your calculations were"; so he put it on his equipment which was accurate to many decimal points and read on his display unit, ".009 microfarad", so we thought we were pretty good. I said "Touch" to him because he didn't think we could do it. I made two ro three of these, and I still hae one of them that would work if I built the receiver again, which I have been thinking about doing, except there is always something else, like a lot of other projects which one has as one gets older.
The resistors were another problem. We found out that we could use the impurities in some of the tree wood and the bark, particularly cinnamon bark bark which was available by getting through the wire only about 2 feet and we could normally pinch that while the Japanese sentry was moving around. We used a piece of string with the material rubbed on it from the burning of the cinnamon bark with some impurities in it (we didn'thave a chemical analysis); we weren't very fussed because most grid-leak resistors were about a megohm or thereabouts and we had no means or any way we could measure a megohm, so it was largely a trial and error thing to see if it would work. We made a number of these bits of string and tied them round different things to dry them out to get the thing going. Eventually about an inch, three quarters of an inch to an inch, was about the right order of things to get about a megohm resistance. They were the two main things.
Now the things we couldn't provide, couldn't do. We had to make coils; they were largely trial and error, one could calculate the inductance of these if one had access to some means of measuring the wire gauge and the space between them. So that was largely a trial and error business.
The two biggest components, or two biggest requirements, were we needed some headphones and we needed a valve, and I thought that the rest could be made locally with a bit of luck. On the question of the headpiece an outside contact smuggled in one headphone, which was better than no headphone, and a valve - no valve holder but one can't have everything in this life.
The other trouble was the power supply. The Japanese main around the camp which provided the power was 110 volts roughly according to the power station meter which we couldn't help but see, because we delivered the wood there while the power station was running; I switched over when no one was looking and the frequency was about 60 Hz, not 50 Hz as we thought, not that this worried us anyway but to know that it was manageable.
So two problems remained for the power supply. The first one was the A-battery or low voltage supply necessary for the filament of the valve. We started with a couple of dry cells, but these didn't last very long and we had to make something then. Through being friendly with the pharmacist with the party, we got some potassium bichromate and made up a bichromate cell, which is probably well known in the text books but not of very practical use. It's fairly hungry for zinc and it needs some sulphuric acid which one can't throw around or hide easily, but it served for some time and was quite

successful but, in the end, had the operation lasted very long, we would have been in trouble for that. Two of these cells provided about 3 volts to 4 volts, and 6 volts was a bit too much because each cell was running at a bit over 2 volts, about 2.2 volts.
The biggest problem was a rectifier to rectify the AC into DC without dropping it to a low voltage, because remember in those days we needed high voltages for the B supply, or anode supply, but in these days we bring everything down to small DC voltages; we needed to get them up as high as we could. That was a partial failure in that using aluminium foil again and oxidising one piece of it, or length of it folded over, with some weak acid and then using the two electrodes, one of clear aluminium and one of a zinc salt and aluminium, we could make a rectifier. We wouldn't be so audacious as to call it a rectifier now, because it had a reverse voltage of something like 30 or 40 volts, which wasn't exactly ideal, but for DC we had no option. The result was that I made a bridge rectifier but the only problem was that after 15 minutes the electrolyte began to boil, so it was really passing current in both directions but a little bit more one way than the other. So a single cell, an extra rectifier cell, was the only way I could close this down a bit, and some smoothing. This we achieved with part of a fish plate from the railway line which was being used at the aerodrome to move the dirt from one place to another by man-power, about six men on these, and the odd fish plate used to disappear anyway for various reasons. I dropped one off at the power station and asked the Chinese under my breath if he could cut it into three little sections which he did, he didn't want to know why.
Then again using some palm oil and some bee wire which was in fairly plentiful supply, which we stole - it was a bit risky because the Japanese were cultivating a couple of beehives outside the wire and of course this wire used to disappear for various things unrelated to radio - and we put the palm oil along the wire stretched out and rubbed this palm oil on it, thickening it with a little bit of flour and then heating it; the flour bound the palm oil together and formed a fairly good insulation over the wire. Good, but lucky, and with a lot of travelling.
I should come back to the capacitors on that, because we had to insulate the layers of those which we did by putting a layer of newspaper (a few people had newspaper and various things, for other reasons than newspaper of course, but then we had no other toilet requisites in the party) and by soaking this in some coconut oil we could insulate each layer after we wound it, and with a piece of this bee wire - we had something like fifty feet of it - wound round this part of the fish plate, we made a fairly good choke coil. And then a bigger capacitor, which was no trouble, having had success with the small one, to just wrap as much tin foil as we could round another sheet of newspaper which finished up about 18 inches long by about three quarters of an inch in diameter. We didn't even try to measure the capacitance of it, because we couldn't do anything about it anyway, except put more wire on. And that in effect was a fairly good rectifier, a very dangerous one because we had the
110 all right but we had a bit over that by the time we had rectified it, and we don't know because we had no means of measuring it.
Finally, the valve; we joined the valve by winding the clean little bee wire

around it and then plugging it with any insulating material we could get to make it stick, - no valve holder, of course. So eventually we produced a receiver of sorts, except it wouldn't oscillate. We tried building more, another choke coil, and this went on for ages; there was no possibility we could get this valve to oscillate. I think it's recommended according to a friend of mine who had an amateur licence, he thought that about 120 volts was the best we could get and there was no way we could get that by trying to smooth this any more. So the only avenue open was to bribe one Chinese working at the power station who was very much our way, and of course in those days was a nationalist Chinese. The capital of China in those days was Chungking, and I told him we could get him some overseas news from Chungking if he would slowly wind his field coil power up on the generator every night starting at about 9 o'clock bit by bit, and get it up to about 130 on his meter. He understood, and after that I said half an hour to drop it again, very quietly and slowly because it may affect the lights "....and you no speak about that because you get chopped, you know, and we will give you Chungking news...." This was duly done and for about six months we had reliable communication. The first trial on air had too much hum, and we had to modify a few things two or three times in attempts to get it right, and in the end we had a workable situation which was worth exploring.
Capacitors right, choke coils right, one head phone, we had some old rag so we tied it round the head and tied it on, or string, or whatever we could get. With the hope of recording something we took some paper, which wasn't in plentiful supply, but the odd piece of paper we could get. Running notches down the left hand side, about a quarter to a half inch apart down the paper, and bending it over so that these little pieces stuck up in the air, and in the pitch darkness one could then put the headphones over one's head with eyes looking out for possible interruption by the Japanese - we had some lookouts, or cockatoos as the Australians called them, around the place to warn us at the oncoming of the Japanese - and with great trepidation we heard Big Ben chiming one night. Of course only one of us heard it but we were so full of enthusiasm. It was the BBC all right; it was quite a clear signal but it was somebody talking about growing hops in Kent. This broadcast went on for something like three quarters of an hour without any interruption, but ultimately the signal faded out and I was very annoyed. I was asked the next morning by my senior officer what was the news, and I said "we've got good news; I can't talk here, come this way." So he came along and said "what's this news you're talking about." I said I didn't actually hear any news, and he became very annoyed with me and said what the hell did I mean, and I said "if the British primary producing experts are capable and able to spare the time to talk about growing hops in Kent, Britain must still be alive and floating with their thumbs up, and as far as I'm concerned that's the best news I could hear!"
That's the outline and maybe there are some questions I haven't covered properly.
BJ: The first question I would like to ask you is: What did you have in the way of tools, if any, and how did you connect the components of the wireless without, presumably, a soldering iron?
RGW: No soldering iron, no solder of course, and no other system really available but to twist and wrap with some coconut oil paper, or cardboard or

something, and very gently lift it. It was on a platen of wood we obtained somewhere; it was about a foot by a foot or something, so we just mounted the components on that. A meat skewer on the capacitor - oh, we had a capacitor too, a capacitor, a valve and a headphone, which were external to camp components we had. We didn't have any tools at all, except someone obtained the use of a sledge hammer - for what purpose I don't know because one of those would not be needed to escape; other than cutting up the soft iron of the fish plate which was about the only reason we needed anything, the rest were just twisted wires. We just wanted to get one usable because we didn't know whether it might be blown up or captured; we weren't worried, the main thing was initially a short term aim (as well as a long term aim) that it might last. Fortunately, it lasted for over a year - sixteen months until the arrests took place, but that's another story.
BJ: Can I just ask you - the components for the low voltage battery cells that you produced, where did you get all the components from?
RGW: Well, zinc wasn't hard, there was some sheet zinc lying on the aerodrome and we pinched quite a bit of that because that would be eaten away during the use of the cells for the low voltage. I don't know what would have happened if that ran out. I think someone produced two lantern cells which did for a while, but it was mainly on this home-made cell system, which wasn't efficient but nowhere near as inefficient as the rectifier was. We must have been consuming... Ah Ping said he had to turn up a lot of power to keep the lights what they wanted. We were dispersing such an amount of power in this four test tube rectifier for the high tension. A variable capacitor was another component we had to bring in. We couldn't make a variable capacitor, it was impossible. We had to take two plates off the one we had to get a high enough frequency. Yes, I can't remember why we didn't go up a bit in inductance; it was largely a trial and error business really. Except that in a regenerative receiver you had some idea when you were near a station because the receiver was so sensitive as all regenerative receivers are. It had a piece of meat skewer type wood which I had a hole drilled in by a pen-knife, and we glued this in with some of our glue or something, into the capacitor shaft so that we could tune it by holding a little stick across it, fixing it at about six inches because one couldn't get one's hands any closer to the set because it was in a state of very near oscillation where the maximum sensitivity is, just before it bursts into oscillation. With a fairly clear HF band, it wasn't long before we knew roughly, by putting a couple of marks on the stick, where it was. We knew that the Voice of America was due for a transmission and Idon't think we ever knew the frequencies because the BBC didn't announce frequencies, they just came on the air and broadcast.
BJ: What did you use for an aerial?
RGW: A clothes line. All the huts had a clothes line of some sort so we just took a thin wire from that and wrapped it round the edge, knowing that a normal sentry wouldn't take any notice of it, and we just dragged that across the side of the hut and brought it in, and the people with our permission would put their loin cloths out and hang them over this when they washed them so it looked as if it was being used. The toilet in the sleeping block was a hole in the ground and it was verboten to be used by anybody except to put our radio set in when it wasn't in use; everybody respected

our wishes in that regard!
I think the best thrill was, well two or three thrills, which were momentous I suppose and of great excitement, almost excitement of crying with excitement, and the first was I think when we heard a full news bulletin of something like 400 aircraft over Dresden or somewhere, pounding the place to pieces; we were very pleased about all this. But from the land point of view, from the beginning of '42 I think, I can't remember, but sometime just before the Battle of Alamein, and we heard some of the troop movements in preparation for that. The bulletins in those days were fairly long and gave a lot of detail.
Unfortunately the first lot of rectifiers blew up about 2 days after this so we were out of business for something like 5 or 6 weeks. Of course, the rumours started to flood in as to what was happening, what wasn't happening, the war would be over in 5 minutes and all these mainly optimistic things; but there were a few super-pessimists who said we would never get off the island, and would die there, and that sort of thing. But the thrill, I think, was when reception was restored again and we had to do another little bit of fine tuning because everything you changed seemed to affect something else; the whole thing was very sensitive and wouldn't have stood up to present day quality assurance bump tests!
So back there on the first night we missed the BBC for some reason, and the next thing was the Voice of America which had a headline which ran something like this: "The war is over in North Africa, Rommel is knocked to pieces, he's out of the Middle East and the Middle East is finished, the future for this and that ....." That was the end of the American news in about three sentences! No other detail, so I said we would go back at about 12.30, and hope that Ah Ping hadn't pulled the voltage down too far, to see what we could hear. Again, the BBC was a little low but it suddenly came quite bright and lifted in volume, and Big Ben chimed again and there was a voice in the wilderness calling. It was a lovely sensation to hear Big Ben playing in those days, and every time I hear it now I become excited. The announcement, initially in a most depressing vein, described all about the 8th Army's movements, and it was here that it did this, and this regiment drew up and did that, on and on this went for something like 15 to 20 minutes, and we tried not to follow it because we had our eyes on too many other things, look-outs and so on. But a lovely flow of English and if you had a tracing board you could have traced out exactly where everything was in situ, but of course that wasn't the aim of our exercise which was to get news. At the finish of the news the polite sentence said "It must be considered now that as all resistance in North Africa has been overcome the Allies victory must be "assured" or something like that. And that was all he said, but he took a few minutes to describe everything that happened, so you had a clear picture. But the Americans seemed to be creating for a public that just wanted the headlines, three headlines and that was all; no other interest in anything else. That was one of the happy moments of the system.
We had the problem, of course, of writing the news because naturally a lot of people wanted to know it and a lot of people could be told it without its origin. This is why we used the piece of paper we took with us (Gordon Waite and the other officer who used to share some of the work), and as soon as we heard about 30 bombers over Dresden or something, you just put 30 BD, or B

for Berlin, and feel the paper down when you felt it coming to the end, and pick up the next little bit of bend and write along that in the pitch dark, hoping that you've got something in the morning. Surprising how legible it was, just triggered a couple of words like that. Unfortunately, I was in deep custodianship with the Kempitai when the Atom Bombs were dropped and I didn't hear that news on the BBC; it was relayed to me. We didn't keep these things, of course.

Getting off the technical side now, the radio set didn't betray itself. Some criticism could be levelled at us I suppose. We trusted too many people; we had no intelligence training then, of course, or anything like that and we were inclined to trust every Asian we met who smiled at us and who said he was one of us. Anyway, while this was going on at the aerodrome and once the troops heard, we had to tell the troops the good news of course. We said we had heard from an unknown source that the war is getting better, or something like that - we had to give them a sanitised version. It was probably all they wanted but, naturally, two or three senior officers wanted to know as much as they could because they may be the ones who would have to take some decisions one day about it.

Unknown to us an Indian - I don't like saying this and I'm not being racist, it could have been any nationality - blackmailed a Chinese who was helping us on the aerodrome picking up bits of iron for us and various other things. He blackmailed him but the Chinese wouldn't talk, so the Kempitai arrested the Chinese and put him on a rack; he mentioned in the course of his cries for help - which was not a nice thing to think about but I don't blame him - he mentioned Captain Matthews and a couple of other people; I think I would have done the same thing at that stage.

The Japanese then decided to make a raid on the camp, which they did, and I was then charged and taken away by the Captain; he wanted the receiver and I gave it to him in the end after a lot of leading him round the camp with his soldiers. I could almost laugh at some of the things that happened. He must have told them he was looking for a radio set; a Jap soldier came running up to him with a piece of metal which looked like a piece of horse harness or something; the Captain almost kicked him and told him what to do. So in the end I decided that I couldn't talk to anybody before the rest of the troops on this parade ground, and I felt so conspicuous. He walked back and said "Are you going to tell me because we want the wireless set?", so I said "Yes, I've just thought where it might be". So I went across and told him where the hole was, and they dug the hole up and, of course, there was the transmitter. He said "Ah, you've been sensible at last", so he took the transmitter and they took it away.

>From that day on, I was worried about this because I knew the receiver was OK and the troops would be happy about that; they would still be able to get news. And then he took me up to the platform where he stood and addressed everyone. All he said in English was "You all look at this man, you will never see him again" and led me off. I had a sort of a dying wish, going in on the vehicle to Sandakan to be interrogated, that somehow or other this set could be preserved and, of course unknown to me, it was. They continued using it but not until after about a week or so - their nerves were a bit shaken. But they used it for some months afterwards until the big moves came and it was a successful source of morale lifter.

During the trial, that was when the shock came to me when this transmitter was brought out by the prosecution as evidence that we had been using a receiver, but the Court accepted it. It was never mentioned after that because had it been, I don't think either of us would have been alive, because we had planned to get some crystals from the Philippines and try and fit them in this set then we could call them on CW and give them some news about ourselves. But we did get some news by other means, via an agent taking a sandalwood vessel across, that the British and Australian authorities knew where we were, and it was proved at the end of the war that they knew exactly where to come for us. They had guerilla parties in behind the lines, but they couldn't contact us and they had to watch some of our people just die virtually, because they were there and there would have been trouble otherwise.
BJ: Could I just take you back and ask you to fill in a few details about the transmitter. You talked a lot about the construction of the receiver and I would be very interested to know where the transmitter fitted in to this; were you developing that alongside?"
RGW: "No, the receiver first; we had that, and then we started the transmitter as a rather low priority of course, but one it would be nice to have. I had finished the two 6L6G's to make a push-pull amplifier that was the RF output to be, and the oscillator, and we had the capacitor but were missing a few more components andthat was about where we were. In other words, in the course of events, had he been an expert with some sort of knowledge of electrical engineering, we would never have got away with two 6L6's sitting up on a block of wood with a few capacitors and things hanging on them, but obviously the Court Martial officers were normal, without disrespect to Infantry Officers, and they had no knowledge of telecommunications.
BJ: Again, the valves you used in the receiver were...?
RGW: Only one, that's all we had, which was brought in by Mr Mabey. He smuggled in a pipe to me, a smoking pipe, with some tobacco. Lovely gentleman. Unfortunately, I never had long with him, he died soon after being arrested. His widow lived at Hove with her sister; the two are deceased now.
End of recording.

It is the earliest memory of my life: American Jews in numbers not only stood passively by as the Holocaust went down, they also denied they were Jews.

I recall my Dad, a pillar of integrity, and my Mom discussing Lindberg's tilt toward Hitler. The anxious expressions are seared in memory.

As a youngster, i recall when shock of the Holocaust was incomprehensible. Families were torn asunder by the inability of the older generation to account for their passivity while masses were slaughtered.
While fingers were pointed at the Catholic Church and others, they weren't pointed back where they properly belonged: at ourselves.

For many of us, it represents an incalculable motivator; our very survival is at stake. And so you have the Jewish lobby, strong and indeed effective. Equally effective is the outpouring of Jews worldwide, and their willingness to transport themselves from the lap of luxury to the front lines of Israel's defense where a lonely death threatens.

Yes, I am a Jew, consumed with the survival of Jews.

Many of us, unconcerned with the bottom line, generalize our feelings to the disenfranchised everywhere. After all, Jews were some of the first to die on the front lines of the Civil Right's movement, as they marched shoulder to shoulder with Dr. King and his twentieth century pioneers.

Fortuante to have a Dad who cut my teeth on the Constitution, I followed in kind. Not only did I march as a student at Johns Hopkins but after my first career, I aspired to teach in the toughest African-American school in this city. I thought I had something special to offer and, no matter how hard, I owed myself to turning the inner cities around.

To immerse myself in African American studies, I began doing original research on the Civil War period. After making the extraordinary discovery that the era, lost in the dust of history, had never been been accurately reporte, I embarked on stories of newfound, Florida, African-American heroes and heroines, such as Susie Taylor and William Walker. They've been published by leading newspapers here in South Florida, studied in our schools, and I have been honored as a leading writer of Black, Florida history by the Fort Lauderdale Sun Sentinal.

If you read the Elian posts on this NG, you'll discover how driven I feel these days about the Cuban passion for freedom. I've come to feel that the cause is no less than the Jewish, African-American and countless others, many of which I'm uninformed.

With this recent realization, I've begun to understand that we human beings are always developing. Expansion of the human mind means embracing all of humankind, not simply one's own proximate issues.

Talk about the dark side of anything, my friend, but here is a Jew, typical of so many, who devotes a part of his life to society. And that is the teaching we've inherited through the ages.

It is not one of cold statistics, self righteous, moral outrage. It is real, attended by love and acted upon.

Or, it is easier to say Lambda and Rainbow consist of ham radio operators
with an abnormal sexual orientation and their supporters. Much easier.

Yes, there are those that say it is genetic, and there are those that say it
is not. Whatever. Whether you are born that way or you simply choose that
abnormality, is something that has not been concretely proven either way.

This leads one to ask: If an operator is not licensed in the Amateur Radio Service, is he really operating an "amateur radio station" as mentioned above? A reading of 97.3(a)(5) and then 97.3(a)(4) seem to say "no," since no one appears to be "duly authorized" to operate the equipment as required in 97.3(a)(4).

First of all that sounds a little ridiculous and paranoid. If he disrupts it BOOM, he's out again. Of course he should be allowed to speak his mind regarding his political leanings. I think that's why he's not let to check in. Hell, for the last 5 months KJI and the others have HANDED 3950 to Vic at net time. You KNOW that.

KJI checkiinhasn't been "allowed" LOL, in 6 years. I do not think that him checking in will disrupt the net. He has not been jamming them, as they claim. I think they should OPEN it, let him check in, see what transpires and go from there. These guys are fighting a war that's been non-existent for a year. I agree they get jammed. I heard it myself last week and it was terrible. I KNOW that it wasn't Dave and hasn't been. There are people not part of either group that wants to see this stirred up (like kevin does) and continue. So they instigate.
They jamming years past was a result of the net's attitude that they owned 3950 and could move in whenever they wanted. You also KNOW that.
As for what he say about the net, it is just some people, what about what they say about KJI? It goes both damn ways and you KNOW it. 3-7's from Las Vegas

Doc, I agree but I think that it's a matter of principle with Dave. I cannot blame anyone for staying with principles. You see the net claims to be open, perveyors of thoughts and ideas, a bastian of free thinkers, protectors of the First Amendment, yet they deprive this guy of all of these because of something 6 years ago. Not Right. Especially when everything currently (in the last year) indicate that there is no problem. Hell Dave has been turning the frequency (3950) over to Vic at net time for about the last 5 months. Yet they won't take his check - in. Go figure.

'Family Court Dismisses Elian Suit'

" In a 22-page ruling, Judge Jennifer Bailey ruled that her court
had no jurisdiction over the case and that the relativesï¿½ bid for
custody was preempted by federal law. She also said that a
six-year-old was too young to make life altering decisions."

http://www.msnbc.com/local/wtvj/220438.asp

Looks to me like there's some due process of law occurring thanks to
the Fed's.

Much snippage:

>By now most, if not all, of the Extra class 1x2's, and 2x1's are
>probably already issued.

By my count, there are, in theory, 43,680 such possible calls:

K1AA-K0ZZ: 26^2*10 = 6,760
N1AA-N0ZZ: 26^2*10 = 6,760
W1AA-W0ZZ: 26^2*10 = 6,760
AA1A-AL0Z: 12*26*10= 3,120
KA1A-KZ0Z: 26^2*10 = 6,760
NA1A-NZ0Z: 26^2*10 = 6,760
WA1A-WZ0Z: 26^2*10 = 6,760

43,680

In reality, some will never be issued, e.g., AH7K, KH7K, NH7K, and WH7K
(those are reserved for Kure Atoll, and since there is no postal delivery
on Kure, no one could list a mail address on that atoll).

Not sure who you're referring to but if it's the original 'judge' in
this case , she's had just a *slight* problem or two (Conflict of
Interest and a *questionable* campaign contribution (cough cough) of
$200,000.00)

http://www.msnbc.com/local/wtvj/220438.asp

'Family Court Dismisses Elian Suit'

" In a 22-page ruling, Judge Jennifer Bailey ruled that her court had no jurisdiction over the case and that the relativesï¿½ bid for custody was preempted by federal law. She also said that a six-year-old was too young to make life altering decisions.

Lazaro Gonzalez, Elianï¿½s great uncle that has had parole custody of the boy since he arrived in the US, had petitioned the family court for guardianship in January. Judge Rosa Rodriguez awarded temporary custody of the boy to Lazaro at the time, until a full hearing could be held on his claim that the boy would be harmed by being returned to communist Cuba.

The ruling was criticized by legal experts who said that Rodriguez had overstepped her authority, because the federal government has jurisdiction over immigration matters and this issued needed to be settled in a federal court.

Things were further complicated by the fact that during her campaign, Rodriguez had paid more than $10,000 to Armando Gutierrez, a political consultant who has been acting as the spokesman for Elianï¿½s South Florida family. She also paid a company owned by Gutierrezï¿½ wife nearly $53,000.

The case was ultimately removed from her courtroom due to the conflict of interest, and assigned to another family court judge. That judge, Jennifer Bailey, made her ruling on Thursday.

This all came after Rodriguez was indicted on Wednesday on a charge that she accepted an illegal campaign contribution of $200,000. She was charged with two misdemeanors of illegally accepting and failing to truthfully report a campaign contribution. Those charges carry a maximum sentence of one year in jail. She also could be removed from the bench because of the charges.

Rodriguez has said that the $200,000 was a loan from her brother that she inadvertently omitted from her election financial disclosure forms. Her lawyer, John Thornton, said that the judge was innocent and that judicial candidates are legally allowed to borrow more than $500."

Mr. Holcombe and Mr. Meyer are both amateur licensees, K4TOF and N5WLY
respectively. I'd guess that means they were operating amateur radio
stations. Pretty straight-forward stuff, actually.

Hans

Ever since PeterMaus posted such insightful material, sparked by everyone's contributions, I've receded on my position favoring the U.S. Government, guided by you posters that I needed more information and better discernment.

Tonight that changed.

Meeting my Wife at Fuddruckers (a national restaurant chain), we stood in line for our usual rib eye steak sandwiches. Instantly recognizable, Jose Basuto (as head of Brothers to the Rescue, a hallmark on TV) was next to my shoulder as he gave short instructions to a woman in front of us. She turned out to be his Wife.

In my mind's eye, he conjured an immediate behavioral response: Here was an angry Cuban whose group violated Cuban airspace dropping leaflets on Havana, resulting in the downing of two of his planes and loss of two of his pilots. Irrationally fearful of an incident, I turned away.

As my Wife took over my place in line, I saw Jose waiting at a table. Typical of my way, I released the frozen bias, walked up to his table and cordially inquired if I could ask some questions. He smiled, inviting us to join his Wife and him for dinner.

I made no bones about my contrary opinions and lack of knowledge on the issues. He said, it was typical of his uphill battle to win the hearts and minds of Americans. His mild manner and affability contrasted with his television image, and naturally I laughed as I put that fact into words. Always pressured by the short time of sound bytes, prodded by the press, he' told us, he's trying to stop this natural reaction to pressure. His Wife joined us, sharing the laugh, saying she always tells him to loosen up. Here was a public figure sitting before us whom I read one way and in reality was opposite. My head spinned.

For the next hour or so, Jose Basuto and his Wife gave us an encyclopedic history of events. He bemoaned the deep schism in Miami, pointedly complimenting me on approaching him. "Not many Americans do that," he said.

His history was specific with dates, events and support, including the circumstance under which he was forced into Cuban airspace, the ongoing betrayal by the Clinton administration, the reason Sister Jean changed her position, Elian's behind-the-scenes activity in Miami, what Elian expressed to him, the real purpose of General Janet Reno's failed mission, how our Executive branch was without good cause to intercede, how Castro, not the Father, is one of the "real parties of interest," how well the Cubans are behaving given the circumstances, how the Cuban

leadership lectures the crowds about peaceful protest, how Cubans, with the same pluralism we have, are being unfairly stereotyped, and how easily the armed extraction could have been avoided.

To listen to Jose Basuto is to turn the news on its head. And to me, he had perfect credibility. Unable to convey a fraction of the information making its way into my mind, I'll sleep on it, read all of your enlightening posts, and prepare to report everything. You see, it is all too easy to come to the wrong conclusion solely from media coverage-- unfortunately.

Mark,
Once AGAIN, I suggest you follow above link that I suggested to you before.
It
is a link to the hamvention un-official activities. In the description of
Lambda ARC
they state "LARC is the only open and visible public service-oriented club
for gay and
lesbian hams...". Their own description seems to contradict your
statements, unless YOU
are trying to say that there is a difference between the terms of
gay/lesbian and
homosexual.

In other words, CATCH A CLUE, FOOL!!!

Doc, real name is Bob Sherin; Robert Morris is a pseudonym I use in one of my mailbox's. They are one in the same.

To hear Basuto relate the foot dragging by the Miami family, you come away with an immensely emotional issue, grounded in realities. From the start, the Miiamians resented federal meddling; they wanted Elian's asylum case perfected before the boy moved anywhere. They point out the stone wall now that the child is up North, as contrasted to Miami where we saw everyday images. The boy has made unmistakable that he does not want to go back, though he expresses love for his Father. There is a rumor that Elian has been informed by the Washington group that Mom is waiting for him back in Cuba. To Basuto, this episode is but another along a line of perfidious conduct by the U.S. Government, where the U.S. stood by knowing that Bothers to the Rescue planes would be shot down in international waters, failing and refusing to inform Brothers thereby dooming their certain fate. It is not generally know that during that time Brothers had set up a routine whereby they informed the Cuban government of their full flight plans every time they flew their missions. So the military attack, with U.S. foreknowlege and blessing. was criminal, in their view.

Basuto says that Cuban society spans the spectrum from the educated to the not so educated. Accordingly, we see different behaviors. He said enormous effort is focused on containing demonstrations to peaceful--and indeed over the years they have been generally disciplined. Basically, he's saying so many have suffered and risked their lives trying to get here on floats that the American public should be more empathetic to their plight. If the child returns to Cuba, he will not be retained in the custody of the Father but by the State. At 11 he'll be enrolled in live-in political indoctrination under State auspices.

Therefore, he holds, the Executive Branch has gotten into bed with Castro, interdicting the cases running their courses in our courts.

Bob Sherin, W4ASX

The Court order was a defective arrest warrant. Elian had been granted temporary asylum until the appellate Court makes its final ruling. He was not subject to arrest, they argue.

The family does not in any way trust Washington and Cuba, whom they claim have their own agendas. Miamians were waiting for the leadership and/or the father to come down here to sort things out. Basuto told me that, far from danger, if they had contacted them, arrangements would have been made and there wouldn't be any trouble. They were ready to follow the will of the American Government but not at the barrel of a gun. They wanted full consultations. General Reno's trip here, at President Clinton's behest, was not designed to hear their interests but to give marching orders. And that is why Sister Jean changed her position: She saw how intent the government was and could see that it would tangle the boy in the conflict. True to form, there is a stonewall coming from Washington, not the kind of access to Elian in Miami. This they had feared.

A big thanks goes out to Michael Ostrowski whe located my
Grandfather's call. With just a tad over a week to go I'm wrapping
up the studying, concentrating on two or three areas I keep having
problems remembering (Thank god it's open book when I'll be sitting
at the radio!!!)

I would also like to thank everyone here who offered suggestions
on contacting clubs, forwarded the message to the Radio History
list and other alternative methods to find the info.

For those interested, I'm including the abbreviated response
below:

I don't intend, Bob, to start a long thread pro/anti Israeli. However, I think you owe it to yourself to do a little research on the net. I'm sorry I didn't keep the URL, it didn't survive the crash on my old system. There is considerable evidence on the internet concerning some of the "dark side" of Israel. Things like jpgs of actual Gestapo documents from Austria where the current and past rulers actually turned over their own people to the Gestapo in exchange for getting them out of Austria to actually start the state of Israel. Thousands died and are now, of course, touted as marters as all Middle Eastern states do when political decisions to cause genocide are politically convenient. They bought their way out with lives of less fortunate Jews. Funny, I see no mention of it at the Holocaust Museum. The docs and the story, unrefutably presented evidence, are available on the net.

Now I want to present to you some more irrefutable evidence of the "dark side" of our finest friends, that would have been kept under wraps had not the crew been so angered being left to dangle and die at the hands of the State of Israel. Israel says it was a mistake. Our spy ship, flying this HUGE American Flag, looked like an Egyptian freighter. They attacked it over and over, trying to sink it and kill everyone aboard....right under my flag. The part of this story I want you to carefully look at is about the control of the US Government by that money and media run by Jews in the USA. TWICE, not once but TWICE, planes were launched by the US admiral from his carrier to run off the attackers. TWICE, not once but TWICE, the admiral was ORDERED directly from the White House and SECDEF to recall the airplanes that would have saved AMERICAN lives. Why? Because Washington is CONTROLLED by that money and media. It's ALWAYS about money in Washington....campaign money. You control the money, you control the government. It's rotten to its core. Ask the Chinese who bought Clinton/Gore. You may read this entire episode, from the men who lived it aboard Liberty at:

http://www.halcyon.com/jim/ussliberty/liberty.htm

Thirty four brave US Navy sailors gave their lives trying to save their ship from the State of Israel. Capt. McGonagle died last year. He was decorated IN SECRET at the Navy Yard in Washington for his valor. Why in secret? M-O-N-E-Y. We wouldn't want to raise hell and cut off that money flow to the politicians, now, would we? If Capt McGonagle and his crew had been treated as they SHOULD have been treated in 1967, the money to the politicians would have stopped when the money to the State of Israel we're fleeced for, every day, stopped.

What do they do with all that money in such a little place as Israel? Let's look at Tadiran, the Israeli military equipment company. How interesting! Let's see if we see the money flow here......

US taxpayers are fleeced by their Israeli-controlled (money, remember) politicians to an ever-increasing foreign aid package that is just too big to hide. Israel takes that money and builds AWACs airplanes, Kifir fighter jets, and other military hardware with it. Isreal sells these AWACs airplanes to the Communist Chinese at a handsome profit, with OUR money. The Chinese threaten the island of Taiwan using military equipment and technology from Israel. So, if we defend Taiwan at some future date, our troops will be killed with equipment WE paid to build in the first place. Isn't that nice? It IS true......

Nope. I'm not anti-semitic. I've lived with Jews, Arabs, Iranians, Costa Ricans live 3 doors down, as do blacks, Italians, other ethnic groups and members of the Ron Hubbard Brainwashing Society. But the control by ONE group of every media you see and hear is just not right, no matter who that group is. The control of our self-serving politicians by Jewish money and that media isn't right, either.......THAT was my point. It's why I watch my TV news from Canada, the UK and other places. Funny, the color of the news changes when I do that.

Remember, Israel is our friend! Try to remember that when you read the Liberty pages. The whole book on the attack is free on the webpages. If it doesn't make your blood boil that something is very wrong, my feelings go out to you.

See my other post about that "media control" of what Americans see and hear. Pretty powerful, isn't it? It gets politician elected or thrown out. It gets Cubans who came here with nothing, worked their asses off and never asked for a handout, treated like dirt. Pretty powerful, isn't it? The media influence on you, personally, is why politicians fear the group that runs that same media, and their political agenda. Over $3,000,000 per day....flows to TelAviv because of it.

Thank you for your post on this incident. I was also enlightened. I had been told by TelAviv TV that Arabs were terrible, fierce, blood-sucking, swine who were just awful! I was told that about Iranians, too! But, having LIVED in Iran and Arab countries, I, too, found out just the opposite is the TRUTH. I sat under the Amir's picture in the Middle East Hotel in Manama, Bahrain. I was there to do maintenance work on the Great White Fleet, our US Navy presence in the Arabian (in Iran we say Persian) Gulf. An Arab gentleman in his native dress, but covered in a beautifully gold-brocaded robe, approached me. I later found out he was a minor government official who had come to the hotel to meet someone, and a 3rd cousin to the Amir, HH Isa bin Sulman Al Khalifa, who just died recently. He was very curious about why I was in Bahrain, which was no secret. What ensued was over an hour of education for me. His English was impeccable. He graduated from UCLA. Our fleet lands in Bahrain because they are very friendly to our country.....not the anti-US hoards of screaming Arabs you always read about in the TelAviv US Press. They owe about everything they have to the US. After all, WE drilled that first oil well back in the 30's. I've TOUCHED it! It's STILL pumping, today, and is a national shrine in the middle of the country. A pint of its crude oil sits on my mantle.....ESSO it says.

The other guys I worked with, from the Charleston Naval Shipyard, looked astonished when they walked by as we talked. Having lived in Iran for almost 2 years, I'm very sensitive to trying NOT to be the Ugly American in their countries. I was drinking the great tea they

make, not beer or alcohol, under the Amir's picture which would be an insult. I think that's why he wanted to talk to me. It was quite an education for both of us.....

Oh, one more thing to chew on.....I made a little deal with him when he wanted to know why the US supports Israel so much. I told him just what I've told you. It's about MONEY. Well, the little deal was pretty simple. We'd stop sending war money to Israel. HE, in turn, would make gasoline sell for 25c/gallon in Charleston. It was a fun joke between us. But, reflecting on it as I watch the prices rise, I'm not so sure he was kidding......

ART BELL PREVAILS IN DEFAMATION HEARING

Nashville (April 28, 2000) - Late night radio host Art Bell took a significant step forward today in his two-year battle to vindicate his reputation. After lengthy oral argument this morning, Judge Marietta Shipley rejected attempts by local radio stations WWCR and WNQM and radio host Ted Gunderson to dismiss Mr. Bell's lawsuit against them.

Art Bell filed his defamation lawsuit in the Circuit Court for Davidson County after Mr. Gunderson and David Hinkson accused him of molesting children on a program aired worldwide on WWCR, a Nashville-based short wave radio station. Citing the emotional harm that resulted from the false charges, Mr. Bell announced on March 31, 2000 his retirement from radio broadcasting.

Art Bell's lead counsel, Gerard P. Fox of Los Angeles, had the following statement:

"When a person has been defamed, there is no putting the genie entirely back in the bottle. However, the Court's ruling today that Mr. Bell has provided sufficient evidence to allow the case to be decided by a jury goes a long way toward restoring his reputation. This day in Court has reaffirmed Mr. Bell's confidence in our judicial system."

Additional information about Art Bell's lawsuit may be obtained by calling Gerard P. Fox at (310) 229-9300 or Mr. Bell's Tennessee lawyer, John Wood of Branham & Day, P.C., at (615) 742-4880.

There are a great many things that you don't know. Your problem is that
you keep PROVING this.

I notice that you failed to explain why you call yourself "General" so I
have to assume that it is one more sign of your ignorance.

Bob:

Thanks for telling us about this.

However, you SHOULD be telling your local MEDIA about this! Perhaps you could write this as a guest editorial or letter-to-editor?

Hi Susan. as with most MFJ tuners, provide coax hookups to antenna and radio on the back. Then set the 2 capacitors (probably marked transmitter and antenna) to 12 oclock. Then turn the inductor (probably a 12 position switch between the 2 capacitors) for the loudest noise in the receiver. then retune the capacitors for the loudest noise in the receiver. Then you can transmit in low power to tweak up the tuning of you system. Hope that is helpful. Dave Black

Sure, we all need lots of education.

I asked Jose Basuto why he doesn't do the talk show circuit in Miami, since that would give him the time to explain his point of view. He said he had just appeared on a CNN face-off with someone he described as a Cuban agent. I got the idea that he's overloaded with other things and that Brothers to the Rescue has no budget for a PR employee.

As for me, I haven't read the newspaper in months, tuning out the world and tuning in my interests in retirement. Notice how quickly my level of knowledge was overwhelmed, going from authoritative to vanquished, ha, ha; imagine how quickly I'd eat my words with the media. I do not think I'm the one to debate that position, rather someone like Jose Basuto.

With time I know I will become expert. As another way to understand Cuban history, I'm reading a Critical Portrait of Castro by an author Basuto knows and respects.

Larry,

Thanks so much for sharing your rich backgound with us. The personal stories are the ones that can educate us the most.

As an average American, I've long been cognizant that Bahrain is friendly to us. I had thought the reason was, they rely on U.S. defense of their sovereignty. I do know when there is trouble in the Middle East, Bahrain is always ready to cooperate with whatever support the U.S. needs.

Yes, I also remember your post on the media. Larry, believe me when I say, yours are posts I almost know by heart, ha, ha

According to Basulto, the order presented at the barrel of a gun was an arrest warrant. Since the federal court had issued a temporary order declaring, Elian not be taken outside the United States, the order they were marching to connected with that process, where they are awaiting final decision.

Given the background of having reached our shores with a recognized claim for asylum, Elian was not subject to arrest. Basulto voiced the view that this was typical Clintonian overreach, shrouding same in a bombardment of favorable press. After all, most of us Americans are quick to see defiance of law, when in effect it is the federal government defying the Constitution.

George W. Bush was just interviewed for an article in GLAMOUR. This wannabe Prez. didn't know the names of the President of Mexico, the leader of Pakistan and the significance of the Taliban. In fact he didn't even know that the Taliban were fundamentalist leaders of the Afghani government. And there were several other notables and issues of which he had no cognizance. According to the latest polls, he and Gore are just about tied. When the debates begin, Al will prove what a complete Quayle-like idiot Bush is and will win the election by at least ten percentage points. For you Republicans-remember I told you that dismissing McCain was a terrible mistake. For you Democrats-it's in the bag. For you Independents-the debates will tell you which way to lean and the ONLY thing that can get Bush elected is a SERIOUS RECESSION or DEPRESSION.

I agree Steve. This is really just an entertaining "popcorn" movie with
ham radio as a plot device rather than a central element. The plot
would have worked just as well with a crystal ball and a lightning storm
as with an ancient Heathkit and the aurora. I watched the credits to
the bitter end: there was no acknowledgment of any technical advice on
amateur radio matters.

That is bull on several counts.

One Elain is a resident was from the sec he arrived in the US
that is the law

I know that in California that the courts have made
detemeniations of Custdy amoug the migrant workers and the Illegal
aliens. Indeed Clinton at first stated that the Court in Maiami would
have to decide the matter. Colorado last year or the year before took
Custoty of child of two Swiss nationals away from the pearnts on a
charge of Child abuse. these were tourists To suggest that
Flordia Can't rule in the case of a LEGAL Alien is abusrd.

Flroida has always HAD such authroity whenever the matter came
up in Florida before. If it is so clear that it lacked such power why

did the florida family court accept the case and set it for action?

IMHO, WA9KJI only wants to check into the Liberty Net so he can get his foot in the door, and then, over a period of time, completely disrupt and destroy the Net.
I don't believe for a minute that KJI cares about the Liberty Net. He hates it and almost everyone who participates. Just LISTEN to what he says about the Liberty Net night after night on 3950 ... that's practically ALL he ever talks about .. and he's ALWAYS critisizing it and it's participants. Its obvious that the man has a vendetta against the Liberty Net.

Letting KJI into the Liberty Net would be like putting termites in a lumber yard.

It has been so nice here the last week WITHOUT the ELEPHANT BOY posting..... Now I see the IDIOT from WV is back. WHERE WAS HE? Here are a few thoughts I have as to the reason he was MIA!!!!!

1. The 'ole GOAT DIED & KC8JBO had to stick her in the backyard.

2. He EXPLODED after eating a whole bucket of KFC.

3. Someone paid a visit to HORSEHEAD......With a BASEBALL BAT!!!!

4. WIDEASS was too busy with his MAGAZINE reading, hohohoho.

5. His "CRAP SHACK" home burnt down.

Maybe he had to put the 'ole GOAT in an "old age home"......Could he have gotten sick & tired of changing her EXCREMENT infested PAMPERS?

Did he join the CIRCUS & make a few extra bucks working as the "HORSED FACED MAN?" Your guess is as good as mine.

I hope his ABSENCE is PERMANENT next time!!!!!!!!

It's called a paycheck, very effective. Tell the Board of Directors what
you really think and the truth shall set you free.
The ARRL has to show its gratitude to the FCC somehow, what better way
than to have its employees spout the 'party line' about FCC enforcement in
a public forum. With ham radio restructuring the FCC gave the ARRL
everything it wanted except grandfathering everyone who owns a CB radio to
General class, which might have hurt the ARRL money grab membership drive
a little.

3577. Re: antenna design for vhf/uhf

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-05 00:00:00 UTC
From: john graesser <graesser@tca.net>
Message-ID: <sh652jd7gbn162@corp.supernews.com>
Source record: 111791
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.misc

The radiating elements will serve to detune each other, with them in very close proximity you will not be able to tune them without affecting the tuning of the other element. You might have better luck using just the 2 meter radiator and having it as a 3/4 wave radiator on 440.
A better dual band omni antenna is a discone, which even exhibits gain on 440, but it is tougher to do on the cheap.
Be aware that if you are going to use a good feedline, a minimum being 9913 on uhf, if not some form of hardline, then the cost of running 2 feedlines will be the dominanant cost consideration.
thanks, John.

Phil,

If you can go for a single band instead of dual band,
a DDRR works real well. It is reported to be equal to
a 5/8 wave vertical. The most usual configuration is
a circle with a small gap at the end - about 2 " made
from 1/2" copper tubing and mounted 3" above a
sheet of metal. I used a cookie sheet, but have heard
that others have used a large printed circuit board,
9"x9". The total length of tubing is about 26", 19" of
which forms the circle. It bends down for 3" and the
rest is flattened. You screw the flattened portion
to the cookie sheet, and attach the shield of the
coax at that point. The center conductor ends up
about 5 - 8 inches away - roughly 2 to 5 inches
from the point where the circle begins - where the
tubing bends from vertical to horizontal. Setting the
exact point is fairly touchy. This is a high Q antenna,
so a small movement of the feed point moves the
resonant frequency a lot. The "far end" of the circle,
where the gap begins, gets a capacitor. You make it
from a long brass screw and some nuts, plus a circle
of copper. You drill a hole through the tubing,
perpendicular to the cookie sheet. Put two nuts on
the long (3 1/2 - 4"") screw near the head, then a
lockwasher, then drop the screw thru the holes and
add a lockwasher and 2 more nuts. Tighten everything
so that the end of the screw is about 1 1/2" above the
cookie sheet. Add a nut, lockwasher, copper circle,
lockwasher and nut and tighten that down so that the
circle is as close to the end of the screw as possible,
with the bottom most nut filled with threads and no
threads sticking out. The copper circle will of course
need to have a hole drilled through the center for this.
I don't know that the circle has to be made from
copper - a small tin can lid might work fine. The
circle should be about 2" diameter. You adjust
the circle up and down for resonance just like you
adjust the feed point placement for resonance, and
the two adjustments interact.

The antenna is influenced by its surroundings a lot.
So - when you adjust it, you need to back off
a good distance to check it. Where you place it

has a bearing. I adjusted mine on the bench to
143 mhz. When I placed it on top of the car,
it went to 148.

Now, I mentioned cookie sheet - because that
is the version I'm experimenting with. However,
I strongly suggest a rigid ground plane. As I
mentioned, this antenna is easily influenced by
conductive elements in its environment - and
it is also influenced by motion in the cookie sheet.
My final version will be built over a rigid ground
plane.

Finally, there is at least one web site with some
good construction information. It is
http:\\antennex.com
You'll have to select something from that
page to get to the article - I don't remember
what it is - probably something like "2 meter
antennas". The title of the article is
"Build a 2 Meter DDRR for Mobile"
and it is by W5GVE.

I am not paid to post to rrap. My boss would probably even prefer that I not, but he doesn't mind what I do on my off time.

> Tell the Board of Directors what you really think and the truth shall set you free.

I tell my ARRL Division Director what I think on many an occasion. And you are right, I am quite free to do so. I address the entire Board on RFI, RF safety and spectrum matters from time to time, too, and have never felt that I could not be equally candid in that area, too.

>The ARRL has to show its gratitude to the FCC somehow, what better way
>than to have its employees spout the 'party line' about FCC enforcement in

If you are talking about gratitude to the FCC about its stepping up enforcement in the Amateur community, darn tootin' I am grateful. So is ARRL and probably 90% of active hams. Nothing "party line" about it, Vince; that gratitude is heartfelt on all counts, I am sure. And trust me, if ARRL wanted Ed Hare to "spout party line," they would hire someone better than me to do it, and ask me to do it in a lot more places than RRA and the QRP-L forum.

> With ham radio restructuring the FCC gave the ARRL

ROTF, Vince. That statement was a joke, no?

> except grandfathering everyone who owns a CB radio to
> General class, which might have hurt the ARRL money grab membership drive
>a little.

So are you saying that having more hams would mean less ARRL members? Please forgive me, but I really am having a hard time following all of the twists in this.

Let me clarify, not as ARRL policy, but by my personal understanding of some of the workings of ARRL. ARRL does not want to see CBers grandfathered to General. I am surprised that you do.

73, Ed Hare, W1RFI

I believe that "Ocean State Electronics" still handles the full line of
Datak dry transfer lettering products. They do have a Web site but I don't
have their URL handy.

Name calling, HO? I suggest you go back and read your post previous to this. What's good for the goose---

I've been trying to figure out why you are defending David O. Castle to such an extent. You guys are completely the opposite politically. But that must be it! Opposites attract! You are IN LOVE with David Castle! Aren't you HO?!!

HO and Castle, sittin' in a tree! LOLOLOL!!!

DATAK is alive and well, I'm looking at the catalog now. They now have a set of ham radio sheets (2 different sets). The p/n for the ham sets are:K95B (black), K95W (white). The updated ham sets are: K70B and K70W. The old standby markings are the 948 and 949. Look under LKG Industries Co. Datak Div.
Here in MD, I use Mark Electronics (stocking dealer) 301-595-5040. They're OK people. de K3HVG

Oh, of course he would be curteous and civil at first; a real angel will he be.
But slowly and surely over a period of time Devious Dave will bring his evil
plan to fruition .. the total destruction of the Liberty Net. I've listened to
this guy long enough to know that he is nothing but a snake, and deserves to be
treated like one. Of course, I am not a participant in, nor do I hold any
say-so in, the Liberty Net. But if I was NCS, I'd make sure KJI NEVER got to
check in.

>Hell, for the last 5 months KJI and the others have HANDED 3950 to Vic at net
>time.

So?

Perhaps not RECENTLY.

> I
>agree they get jammed. I heard it myself last week and it was terrible. I
>KNOW
>that it wasn't Dave and hasn't been.
>

And you KNOW this .. how, precisely?
You may be right. But I'll bet you that the FCC knows who these jammers are,
and has known for quite a while. We'll see if anything is done about it!

I think it's a bit too early to tell. Although spot activity IS way down (my raw count on the 3rd was 107) CMEs seem up a tad.
Flare activity is related to sunspots so they may be down as well.

>For all the hype about this peak, it looks as if its going to be a dog. >I was able to participate in only one F2 opening on six this past >winter. Whoopie.

Hang in there, I think the spots will increase again. We had a couple of HUGE ones recently that should make their way around again within 27-30 days or so.

Back when...I sold parts at an industrial parts house in NJ. We sold stuff by a company called Datak for doing panels, letters, meter scales, etc. I've hunted high and low, and all I can find is Datak PC board stuff, but none of the other stuff.

I need to re-label a panel on a radio. And make a custom meter scale. I seem to recall Datak had all of the above.

But beyond that, anybody have any suggestions for custom meter face/scale?

This all for a SWAN 240 I added an "S" meter to and in the process had to go from the 400MA meter in it to a 1MA and a PA cathode shunt to ground.

Yes, we know that a station license and control operator are required but
that wasn't what I asked. You apparently didn't understand my question,
Doc, so I'll rephrase it: If one is *not* licensed in the amateur radio
service (and no control operator is present), can it be said that "he's
operating an amateur radio station"?

Look, there is no reason to be embarrased about a vanity call.
The reason why the vanity call program is in place is to have
one of them! Dont worry about what other people think.

Vince Fiscus, KB7ADL wrote:

>This that the offical ARRL position?

Your sentence does not make grammatical sense. Can you explain what it means?

If you are asking if that is the official ARRL position, I don't know. I don't recall ever seeing those words printed in QST or in any of the other mechanisms ARRL uses to disseminate its "official" positions.

I don't recall where to get it, but there is an FAQ on the netiquette of newsgroups that explains that participation in newsgroups is considered personal, unless otherwise stated. Would it help you if I email you a copy?

I see nothing in my statement that is contrary to any of my undestanding of ARRL's position; I have seen no change in enforcement and the FCC put a lot of work into restructuring. My conclusion is that those two factors indicate that the FCC still cares about ham radio.

You know, I am curious, now; what would the difference in your reaction to my statement be if it WERE an ARRL statement instead of an Ed Hare statement. Would the difference change the meaning of the idea or its validity? Would you react any differently in either case?

73,
Ed Hare, W1RFI

I helped a Russian Jewish family get resettled here in Charleston,
just a little. The Charleston Jewish community brought them here in
the late 1980's. There was a man, his wife and 4 kids, 3 teens and a
10 year old. Only the 10 year old spoke any English, as I recall.

One of my clients, Harold Fox, who is a great guy and, at the time,
owned Keys to Music, donated an upright piano to the cause. The lady
was a professional pianist in Russia and taught piano. So, we
actually set her up in business for both by giving her a practice
piano. Noone took pity on us movers by giving them a DOWNSTAIRS
apartment. The men in the family helped us up those stairs.

It was my first experience with real oppression. I have a hard time
believing someone who I pay a welfare check and food stamps as being
oppressed. Here in the South we see them driving their new Lexus,
encrusted with gold chains, expensive Nike sports clothes and $150
basketball shoes. Please don't feel sorry for them, they are thieves,
who vote themselves free checks from the working class. Noone
weighing 300 lbs is "oppressed". They eat better than I do.

Wish you could have been there to see that nice Jewish lady's face
when I pulled that Baldwin piano off my truck. Hee hee...I wish you
could have seen my black helpers, Willie and Melvin (brothers) when
she started hugging and kissing them, speaking in Russian. They'd
never seen a Russian, before, having been told Russians were
barbarians by the press and government. She cried on my shoulder.....

Hi George:

If you are handy with a computer, or know a friend that is, you can do everything you need with a computer.

There are actualy a number of possibilities. You can make a meter scale with a CAD program and after everything is just right, print it out on a glossy photo stock paper which ink jet printers can utilize. The resulting prints are gorgeous. Some fellow made a scale for a meter and I got it from him by e-mail. He had purchased a CAD program for about $20 and I also bought that program. The scales can be changed to whatever you want to use by just replacing the numbers and the name. Works great. Previously, I just took an existing meter and replaced the numbers with new numbers cut out and pasted on the existing numbers - then photocopied the face. Presto.

Computers can also print nice decals. I just built a clone of the old one tube Ameco AC-1. The original had a wonderful oval yellow "Ameco" logo with lighting bolts above and below. I made the decal by simply using a drawing program and finding a lighting symbol. After printing it out, I covered the front and back with clear mailing tape (the 1.5 inch or so wide stuff). This protects the label and provides the same tension front and back. Then I cut the oval out and pasted it on the clone. It has the same shininess as an original decal. It is the center of attention of the rig.

Another method can be used - especially for logging numbers around knobs. You create the numbers with a CAD program or a drawing program. Then, use an ALPS printer. The ALPS printer is like an ink jet printer, but it uses a film rather than ink. You then purchase 8.5 x 10 decal paper and print onto that. The advantage of this printer is that it does not rub off like ink jet stuff. In addition, the film is available in white, gold or platinum - in addition to all the normal colors. So, if I need white printing on a black front panel, I can do it.

Otherwise, you can use the decal paper with an ink jet and if you expect wear, cover the printing with the wide mailing tape.

Have fun.

In a previous article, <jeffreyh@Hawaii.Edu> writes:

>But you'll note that the FCC didn't state their callsigns, something
>that agency usually does.

The FCC stated their callsigns clearly enough for me to read.

Below are excerpts from the FCC orders.

"1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of eight thousand dollars ($8,000) against Paul E. Holcombe, licensee of amateur radio station K4TOF, Houston, Texas, for willful violation of Section 333 Communications Act of 1934, as amended ("the Act"), and Sections 97.101(d) and 97.119 of the Commission's Rules. The noted violations involve the operation of an amateur radio station so as to willfully or maliciously cause interference to radio communications and the transmission of unidentified amateur radio communications."

....and

"1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of eight thousand dollars ($8,000) to Robert L. Meyers, licensee of amateur radio station N5WLY, Houston, Texas, for willful violation of Section 333 of the Communications Act of 1934, as amended ("the Act"), and Sections 97.101(d) and 97.119 of the Commission's Rules ("Rules"). The noted violations involve the operation of an amateur radio station so as to willfully or maliciously cause interference to radio communications and the transmission of unidentified amateur radio communications."

> (and no control operator is present), can it be said
> that "he's operating an amateur radio station"?

Yes, it can be said.

The FCC has issued me a license to establish an amateur radio station.
I have built an amateur radio station at my residence. A copy of my
station license is prominently displayed.

If my son (who is not licensed) were to operate that station today
while I am absent, he is clearly "operating an amateur radio station".

There, I said it.

Wow, the above example gives new meaning to the run-on sentence.

Castro and the American Cubans were pawns in an even bigger political
game. Several agreements between Kennedy and the Russians were made
as the result of the Cuban missile crisis. One of them was that we
would not take up arms against Castro or support clandestine
operations to overthrow him. Since then, the only thing to come out
of Washington against Castro is rhetoric. If the Miami Cubans want a
job done they should do it themselves. A better question might be why
haven't they done it?

They haven't done it in part because the Feds keep a close eye on the
Cubans in the US to make sure that they aren't organizing any kind of
military action against Castro. It isn't in America's best interests to
permit such an attack to be launched from here. The majority of the
Cuban escapees understand and agree with this -- they are playing a
waiting game, while providing support to those who continue to escape
the "Socialist Paradise."

Yep, one wonders how Riley gets around in public dragging all those strings behind him.

It is my understanding that literally hundreds of complaints about, and hours of incriminating audio recordings of, WA9KJI and W9ART have been sent to the FCC over the last few years. The FCC's half-hearted so-called "action" against these two bums speaks volumes about your puppet theory. You can bet your a$$ that if it was one of the Liberty Net participants in those complaints and on those tapes, they would no longer have an amateur license or a transmitter.

Source record: 111743

That's all I'm saying. If you have clear cut "evidence" on that day/night. Then present it. I'm sure that Riley will do the right thing, depending on what is "presented" as evidence. An affidavit and witnesses mean little without hard evidence. Do you know how many people would say the "net" did this or the "net" did that at any given time? There are quite a few and unfortunately some would make "false" statements to achieve a goal. If there's "evidence" Burk, then have at it.

Ps. let me guess who they are, Lauterbach, Parker, and Misek. LOL

Burkswl wrote:
<<He's "mellowed out" by not doing the jamming as much, disguising the jamming as "checking in"(bullshit), or doing it to the guys before the net, as we
heard happen on March 18th.

Castle and Visser have been nabbed this time. A sworn affidavit corroborated by witnesses and TWO tape recordings from TWO different locations will either land up in their punishment, or prove Riley to be a Clinton puppet.

====================
Huh -- as of April 2000 there are 678,539 US Hams
(http://www.speroni.com/FCC/Licenses.html)
In 1992 there were 524,782 US Hams (RAC CALLBOOK)

Hardly dwindling fast

The current US population is 274,745,387 (http://www.census.gov/)
The US population in 1992 was 254,994,517
(http://www.census.gov/statab/freq/99s0002.txt)

Would you care to do some math about growth rates?

This does not allow for the effects of the change to the ten year
license. It also does NOT show how many hams are inactive. Check the
stats for the ages of hams, and you'll find that the ham population is
mainly Old Farts. We're not getting nearly enough new blood to keep the
hobby vital.

Source record: 111759

As one who has turned to champion the Hispanic cause, I can see, I'm wading into deep water. In telephone calls, the life of the female agent who extracted Elian has been threatened.

When Hispanic hysteria reaches that level, it is hard to be supportive. Most of us Americans have been influenced by the Clinton spin machine, but, however flawed, none of us can support a movement that includes too many radicals who cannot discern the ministerial duty of work from personal political views.

How can any well-meaning citizen write in support of such conduct?

Glen, your argument is their argument. What you see as a problem (not enough new hams), they see as a benefit. They're not interested in keeping the hobby vital. They've got their's, and the world ends when they die, so they don't care about growth and new, changing (Change!!) technology. Less hams means less competition for THEIR frequencies. If you study history at all, take a look at what happened in the late 1930's when Billy Mitchell proved that airplanes could sink ships. He got courtmartialed. The no-cw?-over-my-dead-body crowd would like to courtmartial (drumhead?) all us new hams for rocking the cw boat. There's no point in arguing with them (they love that, gives them a soapbox). Just ignore them. They'll be dead soon anyway.

KK7HO you are in complete denial. Apparantly because you and Castle
are in opposition to the "liberty net" you can't see the forest for the
tree's. I have told you before and I'll tell you again. WA9KJI, his
Texas and Arkansas friends and W9ART are ALL JAMMERS. Yes they have
mellowed out lately. Because of Riley and his rangers. And that's the
ONLY REASON. Take your blinders off and smell the roses.

And I'm not a SWL. I have been watching this 3.950 crap for YEARS.
And the basic problem is DAVID CASTLE and his crew of malcontent
miscreants.

>Yes, it can be said.

Without appending conditions, no it can't. But let's see what
conditions you choose to append in an attempt to provide some
answer in a particular case:

>The FCC has issued me a license to establish an amateur radio station.
>I have built an amateur radio station at my residence. A copy of my
>station license is prominently displayed.
>If my son (who is not licensed) were to operate that station today
>while I am absent, he is clearly "operating an amateur radio station".

You're assuming the existence of a station license at a particular
location. That wasn't part of the scenario. Yet, according to
97.3(a)(5) then 97.3(a)(4), your conclusion is false, for there is
no duly authorized operator present. Paragraph (5) defines an amateur
station ("a station in an amateur radio service") and (4) defines
amateur service; but without a duly authorized person present,
it's not a station in an amateur service.

>There, I said it.

Nice try, though.

"tap tap tap...."

Well Dan, how, if he's "mellowed out" recently is he jamming? Oh, I get it he now the laid back jammer.
Talk about BLINDERS you think that the net does no harm. You think that they have never jammed,heckled, harassed, move in to take over a frequency, open your eyes Dan.
Yes Dave has in the PAST done some things, but so has the net, and again, he hasn't done anything in the recent past. . I KNOW that the instances that are being bitched about now were not Dave. Period.
By the way I am not in opposition to the net. I was in opposition to them trying to "take-over" a frequency when it was occupied. Since the two warning letters from Riley it has stopped and the net is actually quite interesting most times.
You make claims, accusations and insinuations and don't know shit.

3663. European Radio Equipment and TTE Directive

I said "noon sighting." To any navigator, that's local apparent noon.
That's the time at which the sun crosses one's longitude -- the sun
sun reaches its highest altitude. That time can be predicted from one's
estimated longitude. The navigator begins taking sightings about ten
minutes prior to the predicted event; at local noon, the sun will
"hang" at a fixed altitude for a couple minutes, then begin to descend.
Knowing the sun's declination for that day (from the Almanac) and a little
arithmetic will get him his latitude. No time piece is necessary.

This is the method ships used for navigating centuries ago ("running
down the latitude"). For example, a ship bound for Hawaii from the West
Coast would sail down to 22 degrees North and remain on that latitude
until arriving at the Islands. Determining longitude at sea had to wait
until time pieces were perfected so as to have consistent rates of
error ("chronometers").

Source record: 111824

All those years that Glenn Baxter was doing his 'talk show'
tended to put me off any interest in upgrading to general
class. He was a cancer that infected 75 and 40 meters,
instigating other hams to operate badly, and leading the way
throughout the 1990's to make HF sound even worse than CB.

I tangled with Glenn via e-mail two or three years ago, while he
vilified and belittled me on the air in response. When I heard
that Riley Hollingsworth, et al, effected Glenn's total retreat
from continuing to air his 'talk show', my interest in upgrading
to general class was renewed.

75 meters without the adversarial influence of Glenn Baxter is
no longer the 'zoo band' it had become. Coincidence? I think
not!

He's "mellowed out" by not doing the jamming as much, disguising the jamming as "checking in", or doing it to the guys before the net, as we heard happen on March 18th.

Castle and Visser have been nabbed this time. A sworn affidavit corroborated by witnesses and TWO tape recordings from TWO different locations will either land up in their punishment, or prove Riley to be a Clinton puppet.

Absolutely! One can NEVER have too many J-pole antenna and CW keyer
articles in his collection.....

The magazine I'd REALLY like to see returned to my bookshelf was far
too technical for today's ham operator......HAM RADIO. It was so good
it failed to attract the average ham, so it died. Too bad. It had
some of the BEST RF articles ever written in its day. All this was
done without the politics and other nonsense you read in the OTHER ham
magazines.

Larry W4CSC....I have a framed cover from Ham Radio on my wall. It
shows this poor sap with the terribly overrun look on his face staring
into the guts of this tiny transceiver. Under him and the radio,
completely covering the table all the way to the floor, is the radio's
huge schematic.....He looks SO hopeless....(c;

My other framed cover is of 73...the old small edition. Alfred E
Neuman, with that silly grin has a roll of solder in one hand and a
big Weller gun in the other. In front of him is a book entitled, "How
to Solder". If you follow the Weller's power wires around the bottom
of the page, you'll see he is about to solder the HOT power wires that
have been stripped and wrapped together. MAD's expert artists did a
fine job on Wayne's little cover....as did hundreds of other
cartoonists over the years.....(c;

Ham radio DOESN'T have to be all politics and stoic old farts, you
know....

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you

Andy... why? The rig has an effective ALC circuit designed to prevent flattopping and splatter. I'd suggest getting a scope and watch your modulation... you'll see they're not cheating you on 100 watts pep output. Try this another way... what do you want to see for avearge output under voice modulation? What is the "correct" number? If you say 50 watts that's gives you a signal with a 3 db peak to average ratio... most voices have a 14 db range, this will make your signal sound like crap, but most folks won't tell you. If you operate the rig at 10 to 20 watts voice average, you probably get unsolicited complements on your audio... give it a try.

Greetings and thanks for reading this...

I am in the process of trying to get LinKT up and
running for packet under RH-6.1.!!
I have obtained AX25SPYD and the other related files needed for the
install. I successfully installed and compiled ax25syd without any
errors. When it came to installing LinKT, it couldnt find that I had
installed AX25SPYD. The resulted in it not installing using RPM that
is.

I have got the ax25-utuils and ax25mail-utils installed
no worries.. ax25-utils-2.1.42a and ax25mail-utils-0.10. I have used
Linpac and tnt both with this system, so I know that both tnc and AX25
are not causing problems... I would like to find someone who has
installed the program [LinKT] successfully and is using it as their
packet program..

Many thanks for reading this and look forward to a reply....

for

> I never said that.

Well, excuse me and accept my apologies. There must be
someone
else using the screen name 'Innocent John'. The archives say
that on 5/4/2000 -

Innocent John wrote -

Mark,
Once AGAIN, I suggest you follow above link that
I suggested to you before. It is a link to the
hamvention un-official activities. In the
description of Lambda ARC they state
"LARC is the only open and visible
public service-oriented club for
gay and lesbian hams...". Their
own description seems to contradict
your statements, unless YOU are trying
to say that there is a difference between
the terms of gay/lesbian and homosexual.

Then Innocent John wrote -
In other words, CATCH A CLUE, FOOL!!!

So my point is that the entire line from the Lambda
literature was not quoted. I didn't think it was fair
to call Mark a FOOL when you selectively quoted the
literature.

You seem to have a grudge. Marks a fool, I'm a pointy
head, apparently you don't care for the gays.

Who is it that you do approve of?

Have a wonderful day...Lumpy ab0gd

I hate to say it, but YES, we must. We have a president who is desperately trying to come up with some legacy that doesn't include the name "Monica" -- he sees "normalization" of relations with Cuba as the path to that. Would someone who lied under oath and who killed people with cruise missiles REALLY going to let one little boy stand in his way?

We have his successor, who is a PATHOLOGICAL liar (that is, one who can't stop making claims which are obvious lies).

We have his wife, who is now running for Senate from a state where she never really lived, who considers acquisition of power worth anything she has to do to get it.

We have an Attorney General who is a friend and supporter of those three, under pressure to perform.

HECK YES we have to become detectives, when that kind of person has the media willing to parrot anything they say.

This will only be the "Land of the Free" if it is the HOME OF THE BRAVE!

For sale, brand new, steatite antenna insulator. Can be used for that monster antenna or as a conversation piece or paperweight. You don't see these very often! White color, about 7.25 inches long, 1 and 5/8 wide, and 1 1/8 thick. Hole in each end about 3/8 inch diameter. Will sell for $3 and whatever the shipping costs will be. I have more than one if you'd like some as gifts. You won't flash this one over no matter how much power you run!

I think the D2t is a worthwhile expenditure. It does everything the
literature [website for info and reviews] says it will do so I don't
think I
need to go into details. I've received 59 reports on 160 but do not have
a
another 160 ant to compare with. My signal is down about 2 s-units on 80
and
40 compared to my full wave loop ants. On 20 the D2T is at least as good
as
my reference dipole. On 17m and above I get great reports; performance
seems
to be on a par with a small 3 element multiband beam.

Bottom line. I got what I paid for and am very happy. On the other hand
if
you can put up a full size ant. this is what you should do.
73, John

PS. Murray feel free to use my endorsement of the antenna. I think many
hams
could benefit from this product.

8008442784 but first you must go to the internet webpage and fill out a registration form to get your "L" user name and password. The instructions come when you register. Print them out so you'll have them when dialing into the FCC intranet.....

You'll need the 128-bit encryption version of Netscape, and ONLY Netscape, if you intend to pay any fees via VISA/MC. FCC won't accept any other encryption to send them your credit card payments. If you don't have it, you can still fill in all the forms, etc, but must send your payment in with the voucher form printed on your printer, manually, to Pittsburgh's FCC payment center.

If you use 128-bit encrypted Netscape, you can do it all at once on ULS. I was issued W4CSC vanity call in just a few days. They still do everything manually to give them all a job, you know....

Larry W4CSC....Wish someone had helped me get through this maze when I did it....(d^;)

Br. Stair's commune is headquartered in a bombed-out motel on US 15 North of Walterboro, SC, about 28 miles from here. The "brothers" are a very interesting lot of heavily bearded men who do his labor for him. They have a large farm to feed the clan and other business interests to support what "God" and the broadcast doesn't haul in.

Br Stair was the heavy funding behind a pirate radio ship, made from an old Canadian fishing trawler, and run by the guy who had the FM pirate station off NYC the Feds went out and sank to satisfy the NAB lobby in international waters. Belize had given them permission to setup a land-based studio, microwaved out to the boat where Br Stair had twin 1960's vintage old 70KW propaganda SW transmitters, ALL MODES, he'd got from VOA surplus sales. The idea was that the boat was to be anchored, heavily, off Belize in international waters where one transmitter was to be Br Stair's 24/7 transmitter and the pirate radio guy would get the other one to rent out to whomever had the money.

The boat was tied up to some pilings off Halsey-Cannon Boatyard in Cainhoy, SC, up the Wando River at Charleston when I met the ham that ran it. I went aboard to see the beasts, mounted in the fish hold, and run by twin 300KW diesel gensets welded to the deck. The transmitters output was 300 ohm open wire feeders with a tuning unit big enough to match a wet noodle to 70KW on 2-30 mhz. They were using 3/4" copper tubing, separated by heavy insulators and air out the top of the transmitters and up to the big hatch. One side of the "twinlead" simply terminated in an open end, while the other one went through a 300KV feedthrough insulator to feed the RF outside. on top of the insulator was a homebrew "cage" about 6" on each of 4 sides of wire and metal spacers that went up to another "cage" of wire between 4 towers (2 towers for each transmitting antenna) welded fore and aft on deck. The towers were about 80' tall, self-supporting but guyed anyways. This "T" Marconi antenna was the radiating element.

My "souvenir" from the boat was the failed deck-thru insulator that exploded LOUDLY when it flashed over at 70KW on 7.316 Mhz, the

pirate's favorite frequency. You can see the outside half of it on my webpage at qrz.com....just enter W4CSC in the search engine....or on the new qrz callbook CD....with the caption, "See what 70KW can do on 40 meters", which is the truth!

The whole project wasn't going to fly, FCC or no FCC. Soon after the test transmissions started, salt water started leaking into fresh water tankage. Closer underwater inspection by the "brothers" diving under showed there was so much RF current flowing through the hull into the saltwater ground it was EATING THE HULL! They welded huge zincs onto the hull along its whole length to try to stop this "galvanic-like" action, but weren't successful. Funny what a couple of hundred amps of RF can do to a steel hull, ain't it?

I'm STILL convinced, from actually being on the boat and talking with the principles as they worked, that pirate (who carried a pistol on him all the time and was very nervous about the "brothers" throwing him to the fish when they no longer needed him) wanted OUT of the project....He was paranoid about what they would do with him. After visiting in person, I don't blame him. I wouldn't put to sea with any of them! I think he and his engineer who ran the transmitters put that 70KW on the pirate radio frequency KNOWING FCC monitored it 24/7. It had a HUGE signal at my house 20 miles away on ground wave! He purposely transmitted in port, on that monitored frequency, inside the USA territory....just SO FCC would come and save him!

Thanks for the report on Br Stair. Quite a character, he is. He's no Ron Hubbard, though. Lots of people listen and send him money because he tells them what they want to hear. Hubbard was much better at making them believe what they didn't want to hear AND was much better at extracting their money from them!

Larry W4CSC
Did you ever see your skin glow BLUE from RF??
I don't think they were in "safe limits" under the new law, either...hee hee....

Initial illegal testing was done right in the Wando River, until the FCC showed up with a stolen barge from the military's shipyard contractor they'd commandeered, but not paid for, with US Marshalls to confiscate it all. I don't know what happened to the people involved. I think they got wind of it and just abandoned the project.

The law's the law and even though I'm still for granting Elian political asylum, if the law decrees otherwise, then it's otherwise. And if anybody tries to get funny with that female marshal and gets blown away in the attempt, then it'll be his own damn fault. Only a stupid bigot will rant against the entire Hispanic community due to some of the negative reaction about Elian. That's just plain ignorance. I'm sure that the great majority of Hispanics are hard working folks who constantly get a bum rap by bums who mimick the bums on this board. Go to Arlington and see how many Hispanic names you see at gravesites. Afterward just shut up!

I get nasty e-mails from schmuck hams who are in love with Charlton Heston, Wayne LaPierre and the entire out-of-sync-with-reality NRA. It surprises me because I always had thought that hams were intelligent. Duh. There seems to be a clique about whom I know which sends me NRA- sponsored rightwing propaganda explaining why we should put a pistol in every bassinette in every newborn pediatric wing in every hospital in the USA. This is to allow the infants to suck on gun barrels instead of bottle or momma's nipples. Duh.

They send this crap about how Hitler took the guns away from Germans which caused the Holocaust and how Chairman Mao took the guns away from the mainland Chinese which caused the Red takeover and ad crappolium. There's no truth to this kind of stuff. Pre Hitlerian Germans and pre-Maoist Chinese never had guns to begin with. In other words if one wants to get down to brass tacks, it's easy to blow holes into such lying e-mails transmitted to confuse and discourage well-meaning, caring, patriotic,highly intelligent and observant hams like I.

We have several diseases in America which need to be arrested. The first is the abominable rightwing Christian Coalition which is out to destroy womens' rights, infiltrate our schools with an ugly form of theology teaching exlusion rather than inclusion while sanctifying the murder of doctors who perform legal abortions, dictating what and what not can be taught and read in our schools and libraries, invade and take over city governments and so forth and so on. Incidentally I'm 100% AGAINST late term abortions and it must be stopped! Had not the Republican Party recognized the CC for what it's always been, a MENACE, people like Pat Robertson, Jerry Falwell and their ilk would be scrubbing floors in rest rooms instead of polluting the American political landscape. Not only didn't the Republicans do anything about such a disease, they welcomed it and because of it have disintegrated into a party of has beens and wannabes who have gradually been losing power and come Nov.2000, will lose the Presidency and the Congress as well IF in the summer the G.O.P does not nominate John McCain. George W. is a Christian Coaltion patsy who doesn't know Austin from Boston.

The second disease in America is DRUGS which Bill Clinton has done nothing about. All the man did was to talk up a storm while obtaining favors from Lewinsky. How strange it is that he sends our troops all over the world to save democracy and does nothing militarily against, for example, Colombia. What say Bill about the cartel down there and your refusal to bomb it the same way out of sight as you did Milosevic's Belgrage? Is there some kind of deal worked out?

The third disease is VIOLENCE on TV and in the movies. Shooting people is the "in thing" in America, at least that's what the screens are telling us.

Kids watch and somehow come up with guns and go on murder sprees and since they're so young, what is done about it? Their candy, gum and lollies are taken away for a month! GUNS DAMMIT GUNS. They're everywhere. Grammar school kids pack them and the NRA keeps spurring on new and bigger sales and we sink deeper into a hellhole because of it. And hams send e-mails telling me about how important are guns and how great are Heston and LaPierre. You know what, you morons. You'll love guns until someone in your family is shot. That'll awaken you. Then you'll know the difference between your heads and asses.

Another problem here is immigration, both legal and illegal. Until a workable and intelligent system is formulated, STOP IT ENTIRELY. What's going on to our south is a crime because it isn't illegal immigration any longer-it's a full scale INVASION. Question: if the Chinese could have built centuries ago the Great Wall to keep out the Mongol hoardes and IT WORKED, then why can't we do the same extending from southern California to Texas? And if Americans don't want to perform the labor then pay the illegal Mexicans to do it and then escort them back.

or something. As for you calling ANYONE a schmuck - is laughable.
Liberals don't inhale - they suck. FO Doc
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
FIREARM MANUFACTURERS STRIKE BACK

On Wednesday, seven gun makers and the National Shooting Sports Foundation
(NSSF) -- the organization that represents the firearms industry -- filed
a lawsuit in federal court against HUD Secretary Andrew Cuomo, New York
Attorney General Eliot Spitzer (D), Connecticut Attorney General Richard
Blumenthal (D), and government officials from 14 municipalities. The suit
stems from the defendants' stated intent to give preferential
consideration when awarding contracts to purchase firearms for law
enforcement to those companies that cave in (as did Smith &amp; Wesson
[S&amp;W][see Special FAX Alert 3/20/00]) by agreeing to the egregious
terms of the "code of conduct"established by these bureaucrats. NSSF and
the seven gun makers -- Beretta U.S.A. Corp., Browning Arms, Inc., Colt's
Manufacturing Company, Inc., Glock, Inc., SIG Arms, Inc., Sturm, Ruger
&amp; Company, Inc., and Taurus International Manufacturing, Inc. --
allege that Cuomo and the others are involved in an illegal conspiracy in
restraint of trade and are in violation of the Commerce Clause of the U.S.
Constitution. The plaintiffs are asking the court to permanently enjoin
the defendants, from any action to establish regulations on the design,
manufacture, advertising and distribution of handguns beyond what has been
established by Congress. "The lawsuit arises from a politically-motivated
scheme in which these bureaucrats have sought to bully law enforcement
professionals into buying handguns based not on the quality or safety of
the product, but on capitulation by the manufacturer to a regulatory
agenda concocted by these officials," said NSSF President Robert Delfay.
During a press conference announcing the suit, Delfay also distributed
letters from the Fraternal Order of Police (FOP) and the Law Enforcement
Alliance of America (LEAA) that reject the Clinton-Gore-Cuomo agenda. The
FOP stated, "The top concern of any law enforcement agency handling
purchasing firearms is officer safety, not adherence to a particular
political philosophy." LEAA said, "Law enforcement officers should not be
used as political pawns." And in another setback to the attempt to use the
lucrative law enforcement firearms contracts to bully gun makers into
rolling over like S&amp;W did, Arkansas Governor Mike Huckabee (R)
rejected an invitation from Eliot Spitzer to join in what the NSSF suit
calls a conspiracy. In a letter to Spitzer, Gov. Huckabee stated he is "a
strong proponent and defender of Americans'...right to keep and bear
arms," and that he "will not ask [the director of the Arkansas State
Police] to award a lucrative government contract in order to further a
political agenda geared at controlling and ultimately destroying the
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

firearms industry." Huckabee's rejection of Spitzer's strong-arm tactics came on the heels of another response to Spitzer from Alabama Attorney General Bill Pryor, who pointed out that it was the duty of attorneys general to enforce competitive bid laws -- not flout them. For a copy of the NSSF suit, go to www.nsssf.org. For Gov. Huckabee's letter, visit www.NRAILA.org.

SHAME

In response to the NSSF suit, the Clinton-Gore Administration has stated that, in effect, it will continue with its shameful strategy of politicizing tragedy. Cuomo stated he will use victims of violent crime as his initial shield, calling on child survivors of last year's horrific events at Columbine High, as well as this week's criminal attack outside the National Zoo in Washington, D.C., to appear as opening witnesses. The shooting at the National Zoo that resulted in the wounding of seven children once again opened the floodgates for anti-gun rhetoric long before any real facts about the crime were known. Al Gore took center stage, continuing to flaunt "gun control" as one of the most prominent planks in his presidential platform. At two Democratic fund-raising events on Monday, he announced the shooting to the audience, then claimed that all new handguns should have trigger-locking devices (even though virtually all currently do), gun buyers should be licensed and registered, and went on to demonize NRA, the Republican Party, and Texas Governor George Bush (R). Gore attacked Gov. Bush for signing a Right To Carry law. What any of these issues has to do with the tragedy at the Zoo is anyone's guess, especially considering Washington, D.C., already has the nation's most restrictive gun laws, which effectively prohibit the right to self defense. Even the anti-gun Denver Post derided Gore's "brazen and shallow political opportunism." The Post accurately stated, "Youths who tote guns into public places aren't likely to be bothered by...whether they need to have a trigger lock on what likely is an illegally concealed weapon," and also called Gore's comments "trite sound bites from his campaign literature." But what can one expect, as Gore has learned from the master of politicizing tragedy, his current boss. Clinton, this time following Gore's lead, also exploited the event to renew his call for more "gun control," as did District Mayor Tony Williams (D) and District Delegate Eleanor Holmes Norton (D). But Virginia Governor Jim Gilmore (R), responding to Delegate Norton's allegation that D.C. criminals are somehow aided by Virginia's laws that focus on criminals rather than law-abiding gun owners, stated "I think that [the shooting] illustrates the frailty of her gun control idea.... We still live in a free country...and the idea that somehow gun control is going to be the answer...demonstrates foursquare that is not the answer." By the way, it should be noted, that, under current law, residents of the District are prohibited from purchasing a handgun anywhere in America, which, we point out to Del. Norton includes Virginia and Maryland.

CONGRESS BACK IN SESSION

Both the U.S. House and Senate will be back in session next week, and the Senate is expected to begin debate over the Elementary and Secondary Education Act. Anti-gun lawmakers are expected to propose countless amendments to this legislation seeking to infringe on our Right to Keep and Bear Arms. Please be sure to contact your Senators at (202) 224-3121 and urge them to oppose any anti-gun amendments to the Elementary and Secondary Education Act.

JPFO is Honored to Present:
"Ask the Rabbi"

Rabbi R. Mermelstein

Special Notice: Rabbi Mermelstein is currently swamped by all the questions he's received and by the necessity of making a living. For the month of April, please limit questions to methods of destroying "gun control" as an intellectually respectable position.

Rabbi Mermelstein has volunteered to answer firearms-related questions for readers of the JPFO Web Pages. In addition to his background in rabbinics, he was in the business of manufacturing high grade ammunition for both rifles and handguns for 11 years. He served in the US Army Infantry from 1972 to 1975. He was the Handloading Editor of a nationally circulated firearms magazine for three years. He is currently honored to be the Director of JPFO's Editorial Board. Rabbi Mermelstein is, of course, an avid shooter and handloader.

Please e-mail directly any questions you have on the following topics to Rabbi Mermelstein at the following e-mail address: rabbi@jpfo.org

Ammunition and cartridge choice for self defense.

Firearms for self defense and unorganized militia purposes

Specific handloading processes topics

Please note that only those inquiries regarding JPFO's mission of destroying gun control and firearms related questions, will receive a personal response, or be considered for posting on the web site. Time constraints do not permit a response to all e-mail.

JPFO cannot answer inquires regarding personal legal matters involving firearms laws. In all such cases, a competent attorney knowledgeable about your state's firearms laws should be consulted.

QUESTION: Shalom Rabbi,

As a 32 year old jewish male I am amazed and disturbed at what seems to be a common belief that jews don't need guns by other jews, this is the opinion of relatives, previous temple members and seems the jewish organizations ie: B'nai Brith. Doesn't this fly in the face of reality of the holocaust? Do you have any idea as to why this may be and have you encountered this yourself? Someone said that we believe so strongly in G-D that we have given up responsibility of caring for our own fate and that we are doomed to keep being persecuted. My father had lost a large percentage of his family in Austria and my mother's family in Russia, so he made a decision long ago that what had happened would never happen again to us or anyone and taught me safe gun handling at a young age which I will also pass down to my children as well. I only hope other Jews do the same or we are doomed to keep repeating history over and over again. Thanks for your time and looking forward to hear your view.

Alan Rudolph

ANSWER: Dear Mr. Rudolph,

This nonsense about firearms being un-Jewish is a theme in many e-mails that come though here. Please read a letter entitled "My mother's cultural stereotypes" which I wrote in reply to an inquiry nearly identical to yours some weeks ago.

Labeling firearms inappropriate for Jews has it's roots in the Jewish psyche going back many generations. Firearms, to many Jews, represent a threat to life and limb wielded by a murderous anti-semite. Crazy, isn't it, how it can become ingrained into the very gene pool of a people that the mere sight of a gun evokes primal fears of an immediate threat and they are helpless to do anything but be a compliant victim?

The sad part is that this disease will not disappear overnight. I fear that no amount of information distribution will alter the mindset of so many people. To compound the problem Jews are by and large urban dwellers where every mention of a gun in the media involves crime.

Have you any ideas? How does one teach a creature who has tasted the whip that the very same implement could be used to justifiably retaliate against it's tormentor?

I'd like a free lunch for every invitation I've extended to orthodox Jews to be my guests at the local public shooting range for an afternoon of free shooting lessons that was turned down. I even promise them to pickup the range fees and provide the ammunition. ANYTHING to show my core ligionists that a gun is only a tool, no less so than a meat grinder or lawn mower. I persevere, nonetheless. The battle to win over Jewish minds will continue.

Sincerely,
R. Mermelstein

QUESTION: Registration Preceeding Confiscation of Firearms

Your literature is replete with examples of countries which first registered firearms, then used those lists to confiscate them. Unfortunately, when you use that arguement, most liberals will reply, "but that would never happen here."

An interesting question: has there EVER been a case in which a government required registration of firearms, but then did not sometime in the future then confiscate those firearms? If so, what what are the relative numbers?

For example, New York has twice ordered registration, first of handguns, then of long guns, and has later used those lists to confiscate (or "ensure the weapons were no longer in the city").

This requires research, and might lead to an interesting article in the future.

"alford"
04 Jun 1999

ANSWER:

This is the reply from our friendly Con Law scholar:

The question is whether there are any cases were confiscation did not precede confiscation ... well, there are lots of cases ... but how far "before" does the "precede" have to be?

More importantly, the argument will never be won on mere statistical comparisons. Stats don't mean anything when it comes to events of this sort.

Take a look at the arguments that we put together at www.jpfo.org.

I'll address the "it can't happen here" argument briefly here: Nothing happens until it actually happens ... and we have had slavery and oppression under the government of the United States ... we have had concentration camps ... we have had wars of mass relocation and extermination of the Indians, a sort of American "ethnic cleansing." So what is this "it can't happen here?" argument. Just because a particular atrocity hasn't happened yet does not in any way predict the future.

Do we fail to buy burglar alarms or lock our car doors because we haven't been robbed yet? Firearms ownership is a protection and deterrent. It is not merely a response to previous event.

"Liberals" are free-riders on the protection afforded by the fact that their fellow citizens do possess firearms, and that deters both criminals and bad government. They ought to be paying for the protection.

I've heard of overreaction but this is getting ridiculous. Stiffer measures to procure guns and modern sophisticated technology concerning them cannot be equated to CONFISCATION. What's wrong with you? If your theory is valid, then taking an aspirin for a headache is equivalent to having a frontal lobotomy which might serve you well anyway. You view any measure at curbing the possibility of violence as an infringment on your rights and that's just plain silly. "The sky is falling...the sky is falling." GROW UP!

1. Doc is more of a conservative then he realizes.

2. Based on the above from KK7HO I see that Arkansas and Alabama
intend to PRESERVE their rite to bear and own weapons.

And another for you Doc.....its unfortunate your NE Liberal upbringing
didn't also bring with it the ability to COMPREHEND the constitution of
this COUNTRY. What is it you NE Liberals can't understand about the
second amendment?

Why is your interpretation of the gun issue a Jewish issue? It shouldn't be because there are about 8 million Jews living in the USA versus 260 million non-Jews therefore the latter wields the power. If Jews are truly involved in the gun issue it's the Jewish doctors who will close up the gunshot wounds trying to save the lives of so many being shot by gun- crazy Gentiles.

The report said that they have to "respond" to an "affidavit" filed by another ham. If they're jamming they should get it, but, in my opinion, any FCC action based on a letter/affidavit is not evidence. It's just someone claiming this or that. Maybe there is evidence, i would hope so because someone losing a ticket just based on anothers claim that something occured isn't quite right. We'll have to see where it goes.

For some, the fact that you're in business automatically marks you as an evil, grasping, unethical, manipulating jerk. You're trying to make money, therefore all of your opinions must be tainted by greed. While I disagree with them, they seem to be useful, as they act as a counter to those who think that being in business automatically marks you as a saint whose opponent's opinions must all be tainted by envy.

It's pretty much what I expect in a society where Bulverism dominates many a disagreement.

Doc, set the legality of the issue aside. This is a matter of definition/semantics. I'm playing the devil's advocate in this scenario: If an unlicensed operator transmits on amateur frequencies, is he operating an "amateur radio station"? That was the question, no more, no less. You're taking all the fun out of this.

"I was just following orders" was not a defense at Nuremburg. She chose
to do what she did. One must assume that she felt justified.

> How can any well-meaning citizen write in support of such conduct?
>
> Bob Sherin, W4ASX
> Miami, Florida

That same "spin machine" that you decry is the source of the reports
that the agent has been threatened.

And, as a result of those reports, suddenly you are again opposed to the
Cubans in America, despite the enlightement you gained only days ago.

The people who stand to gain by engendering hatred and distrust are
spreading reports which lead to hatred and distrust. What's wrong with
this picture?

3741. What's up with Sister Stair??

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-07 00:00:00 UTC
From: Mom_of6 <tamalla@my-deja.com>
Message-ID: <8f2sol$c8i$1@nnrp1.deja.com>
Source record: 111771

I just thought I would share with you the most recent news I've heard Br. Stair's broadcast.

1. He claims those that go back to the original meanings of words, are trying to twist the Scriptures to make them say what they want them to say. He tries to prove this by misquoting some verse. He goes on talking about all of us who study the Scriptures and want to know the original meanings from the Greek and Hebrew are just being foolish and are only doing it to make the Scriptures say what we want them to say.
2. This morning I was listening to him talk about how God has given him the means to promote his message in such a way, and talking about me, me, me and speaking about his followers we, we,, we on and on, totally self-centered blabbering.
He then wants his wife to come sing "The Old Rugged Cross". He didn't ask her, he told her to come up there and sing it. She must have said no many times because he pleaded, quoted verses to her, telling her many times to come up there, she just kept refusing to come up and sing. He then said, "come on, if you stand up and sing your pain will go away." She also refuses.
I was thinking, 'what is going on there? What kind of pain is she in? Why does he keep trying to demand that she do this, when it is very clear to all listening that she does not what to, or feel up to it. I then thought, how is this going to end. Is he going to make her do it? Is she going to give in, in the end??
All of a sudden, Stair tells someone to put on some music, and music plays for about 15 to 20 minutes, and sure enough, Stair comes back on and says, "Here is Sister Stair to sing." She sings the song very nicely all the way through, all verses, and then as soon as she was done, she must have walked out of the building. Because Stair kept calling her back , he said, "Come back here into my presence, Come back here Theresa, What did you do, lock yourself out?" He then goes on to say something about all his followers needed to be in his presence, and then said , Now, I am not Jesus Christ about three times.
Theresa (Stair's wife) must have said something about she would sing the song, but she wouldn't sing it for him, but for God, because the things Stair was saying sorta went along those lines? (That is just my idea of what she might have said to him)
I wonder if she is starting to have her eyes opened to the truth? If she could be breaking the bonds somehow? Hard to say, but I feel we need to pray for her that God is working on her heart and to see the error's of her husbands ways.
One of Stair's pastors then comes on to present the sermon, I did not listen to this unfortunately :(because this pastor must have tried to condone the little scene all to MR. Stairs advantage of course.

Stair then comes on and says something about the whole community was showing some sort of sin against him(Stair) and it was just showing through his wife. He was just being his normal self and always trying to prove himself by his lies. Explaining everything away and misplacing the things that happen as some sort of great act of God, when in reality it is just his natural self, being the ruling almighty leader and all those are just puppets led around believing everything as what he says as truth.
It is clear he has total control and his wife starts to show a little rebellion and he turns it around to mean something else and always to his favor.
Let's all pray for Theresa Stair that she is having doubts as to her husbands ministry and that the Lord is working on her heart to the truth of His saving grace, rest, mercy and love.

<Your credentials are unarguable but you can't spell "license."

Depends what country you come from. In MY dictionary, there is:

License: To grant or give a licence.
AND
Licence: A certificate, tag or document, etc. giving permission to do
something.

Giving that global nature of the Internet, being pedantic about spelling
often demonstrates narrow horizons rather than spelling acumen, so I
won't point out the words that "you can't spell. ;-)

> So
you've
> been in Antarctica. Hmm, that explains your pompousness. You've become
> influenced by the tuxedo adorned stately penguins down there. You act
as if
> you're putting on the ritz with honorable mention given to its
composer
> Harold Arlen.

I'll use the definition of pompous in my dictionary, you can identify
any differences.

Pompous: Exaggeratedly or ostentatiously dignified or self-important.

Now, let's look at two people.

Person A who thinks that any Amateur who gets a new licence (which he
does not believe is good as the one he got) is a "lazy, welfare"
Amateur. Person A believes this applies to every one of them,
irrespective of whether he has met them or not.

Person B who thinks that Amateurs who have passed the required tests
should be judged as individuals based on their personal merits.

Which one is the pompous individual and which is you?

> The way I see it is this. You are right in feeling that
very
> few if any hams can measure up to your savvy in electronics but I
differ
> with your theory of why become concerned over their existences anyway?

You can have concerns and you are have a right, no, a duty, to express them. But remember this, the Amateurs you are villifying are doing what is required of them, just like you did! Even if you sat for the very first licence exam, there would have been someone who said the standard was too low!

The SYSTEM may be wrong in your view, but judging those people who did the right thing and complied with the requirements as "inferior" does nothing for Amateur Radio. All it does is create a fracture in the ranks.

If they can only be "inferior", why should they bother getting a licence at all? If getting a licence only brings abuse and condemnation, why bother?

>You are putting Mark before the hobby.service instead of the other way around.

"Mark" gains NOTHING from these licence changes, "Mark" cannot gain anything from these changes and hence "Mark" cannot be putting himself before Amateur Radio. "Mark" simply thinks that Amateurs cannot be judged by what licence they got and when. They must be judged as individuals by their actions.

> How fast you forget the words of the notable Dr. Hugo C. Quackenbush who
> said, "Lest not we become invincible in the strata of self indulgence while
> promulgating the fulfillment of questionable allegiance." That's what it's
> all about. Give it some thought my good man. Those words are profound.>>

You surely jest! It is your postings that claim to object to having "welfare" Amateurs, "lazy" Amateurs join the "Elite" Amateurs that was pompous. I thought this was a crock of shit and said so. When it comes to self indulgence, you take the cake.

Since when has rejecting appalling class consciousness against new Amateurs (who did all that is required of them) been a "questionable allegiance"? That is what fraternity is about - support for those people who have followed the guidelines. If you don't like the guidelines, attack the guidelines, not the people who have no option other than to follow them.

Mark.

When the lame have no other argument, out come the actuarial tables. Mark, I am 56, and a code-tested Extra. The actuaries that do my retirement plan give me nearly thirty years on average to continue to be a royal pain. You know what, I see the technology changing as well and from a purely personal perspective I see no giant sense in 5wpm either. At the same time, I see no real reason to whine about it as the average person can make it to 5 in about three days. Growth for growth's sake is called cancer.

It is interesting that you mention Billy Mitchell who can also be credited with inventing the blitzkrieg at San Miheal (?). He was court-martialed largely at his own request to make a point. Douglas MacArthur was on the board and pretty well saved his butt. MacArthur was 61 at the end of WWII

having retired as Chief of Staff. He had a Sixth Army commander (Walter Krueger) who was 65. His predecessor as chief of staff (Sommervell) ran the entire logistics for all fronts; how old was he? MacArthur was good enough at 66 to pull off Inchon which is a military classic.

Now the Navy has never been known to adopt new things easily but we did enter the war with the Saratoga, Yorktown, Enterprise, and Hornet. Bill Halsey more or less wrote the plan for Pearl Harbor -- he did the same thing in an exercise in 1938, on a Sunday morning at dawn.

If it makes you happy, feel free; it has been the privilege of the junior officer to grouse about the old heads for centuries. In some cases, they were correct and learned from it (Schwarzkopf) but in most cases they were full of it. The only real danger is that they continue to fight the battles of their youth well into senility (Jesse Helms). If that is your criticism, you may well be right.

Given that HF is rapidly becoming irrelevant in its entirety, the major function of the Amateur Service is to help make sense out of what could easily become one giant freeband. It may be you who will fight the battles of your youth well after they become irrelevant.

Dick

Excellent post, Mom_of. Thanx for the update. Your observations indicate that maybe all is not well in Stair-Land. Too bad Stair has used the medium to promote his own "interpretation" of things. There is a famine of truth, and Stair has contributed to it. Such a waste of opportunity.

For an equal but opposite reaction to Stair's comments about Hebrew and Greek words, I hope everyone will at least acquire a copy of Strong's and make use of it to keep track of Stair's "renderings".

Keep us posted, Mom_of. Thanx again for the update.

It's hard to admit, when the charter says that you own the government, to accept that you can't trust the government. But when you're dealing with people and power, there is always a superfluity of people willing to abuse the power they achieve. And when the President is elected with only 43% of the voting electorate, and less than half turn out, you can pretty much expect to find that you're in a very small minority of individuals who both know the truth and care about it.

(One of the reasons the Administration has set out to demonize the Cuban Exile community, is specifically BECAUSE they vote. And they tend to be conservative.)

If you want the government to become answerable to the people again, you need to convince the people you come into contact with to vote. No matter which way they vote, if they vote, they get involved, and the kind of spin-rich government that we've had the past decade, become difficult to execute.

And I'm 47, no spring chicken either. Had a novice ticket back in '71, but as you know, they were only good for a year back then, and an all-expenses paid trip overseas courtesy of good 'ol Unk Sam got in the way of my upgrading. (Ever tried to send CW with an M-16? And I sure didn't want a QSL from the guys on the receiving end!!) So here I am 29 years later, getting back in. But calander age has nothing to do with it, it's your mental age. And if your mental attitudes are set in stone, then your thinking will be stone age. Some of the youngest guys I know are 20-30 years older than me. And I also know a couple of 30 year old "Old Farts"

I guess you don't take hints well, Larry. This was addressed on RRAP for you.

Look at QRZ. A "magazine company" does NOT have a ham licnese.

The ARRL Headquarters Operator's CLUB does.

>I'm still wondering how a magazine company can have a ham license???<

The "company" doesn't HAVE a license.

Here's an interesting question. A few years ago, a friend of mine showed me that he could activate computer monitor screen savers (energy savers) by clicking the PTT on his radio. This was before I really knew much about radios and before I had my license, but I'm quite sure he was using a VHF radio (portable) but I don't know what frequency it is. would anyone happen to know what the frequency is of the energy saver that the computer sends to the monitor? Makes a very nice practical joke when standing behind someone's cubicle.

My Novice license is from 1973 (FCC form 660 - July 1972) and looking
right at it here it says 'Effective Date 04-07-73' , 'Expiration Date
04-07-75.' There's also an outlined box in the upper right hand corner
that says 'Not Transferable.' There's no mention on my license about
it not being renewable but I don't think ?? it was.

I have an NEC Message Maker II pager, model PN5PY22B. I would like to program it via my computer's serial port, I have the software, however I can't find the hookup details needed. I need the pin out for the pager's side of the deal. Under the battery cover there is a bit of circuit board and what appears to be four programing contacts. This is a synthesized pager therefore the frequency of this pager is programmable within the 900 MHz paging band. Also wondering if re-tuning will be needed after programming the frequency? Anyone know what the details are?

Thanks,
Dr.D

Date: 2000-05-08 00:00:00 UTC
From: turner@rome.ics.uci.edu
Message-ID: <8f79dc$2up@rome.ics.uci.edu>
Source record: 111594

Any part of this form work for a simple change of address? I read
the 605 over and it doesn't look like it would work for mere address
modification. Just curious. It sure looks complicated to do such
a simple thing now (paperwork reduction act?)

No .. don't get off of "your fat ass" and get a job, Radiosigs. I enjoy your "ramblings". You're one of the best agents provocateur on the whole internet. Triple digits in 3 days. Let your detractors top that before they criticize.

Now don't get me wrong on this. I like KB1EVE also. I enjoy hearing him and Brother John discuss religion. ZQ is a pretty good apologist for agnosticism, but Brother John always wastes him and leaves him laying in the dust. But not until after a lively and interesting debate. How I miss these discussions.

Looking closer between the lines, I think KB1EVE is playing straight man. He sounds too convinced of agnosticism to be sure of it .. if you know what I mean. So I think he just sets up the plays and Brother John scores the points. Still, these 2 make an interesting discussion to listen to.

Keep the pot stirred, Radiosigs. Been dull on here the last few days. Hope you have a good hot topic ready to roll soon.

> Yes, yes, Jeff. Thats solar noon.

Let's see, who's credible? On the one hand, we have someone who actually sailed a boat and used celestial navigation. On the other hand, we have someone arguing some imperceptible difference between his self proclaimed term "solar noon" and local apparent noon, who asked about a clock when the original post clearly listed the necessary chronometer.

My money's on Jeff.

Incidentally, an accurate chronometer wasn't available until after Captain Cook's 18th century Pacific explorations, and the known error in his measured longitute of Pitcairn Island was a principal reason that Christian and the other Bounty mutineers went there to hide after having spent some time on Norfolk Island.

Thanks, I'm flattered and the guy signing as Tolassi, isn't, because Tolassi can't write a damn. Supposedly a nun hit him in the head with a lead crucifix for mouthing off during catechism and a priest gave him a solid right "cross" during dogechism. Notice how I snuck in the "cross" shtick. I tell you I'm a genius at stuff like this. Anyway I can't hear dialogue between KC3AU and Tolassi because RF between VT and NJ is a no go on 20 and furthermore I have no use for that state except for its great university in Burlington which my son attended and graduated cum laude. David has been overcome with bovine rectal gas explosions for which VT is noted and the sulfur dioxide has permeated his brain to the point of incapacitance or is it resistance? Now John on the other hand is trying to bring David back to Jesus whom, I've been told by the patron saint of telephone fraud, Herbertus, wants nothing to do with him. It stands to reason if Tolassi rebelled against Catholicism, then what does Protestantism hold for him? Especially the rabid evangelical kind? Ugh! However John must be commended for making so many converts. All to Judaism.
Must run now and finish some paperwork since I never miss "Everybody Loves Raymond" followed by "Becker" with Ted Danson. And I want to say this: last night's "The Practice" was the best scripted and acted hour I've ever seen on the tube in fifty years. Camryn Mannheim who plays attorney Eleanor Frutt is in a class by herself who's as much of a genius in acting as I am in writing.
Lastly I want to pose this question: if Riley is now clamping down on REAL hams who use phonetics to identify, is it wrong to expect the same strictness to be appied to the upgraded welfare hams who keep saying 10-4?
73 good buddy,
Doc,AF2Y

Sorry for making up a word but after reading the sentiments on this group and r.r.a.misc (besides my briliant trolls), I think I've figured out what many hams are looking for - technology you can play with.

This is just my personal experience, but I'm getting a real charge out of the newer digital HF modes such as PSK31 and MT63. Plenty of tinkering to do there, just not with the transceiver. Alas, it's a black box. But it's motivated me to dive into topics in information theory, error correction, etc.

I'm sure there are other facets of ham radio that invite tinkering. What's your favorite?

Zachary,
A screen saver is not frequency 'sensitive', but the computer CPU can be. An RF 'spike' in the computer will eventually effect the CPU causing it to do some really odd things (none of them good), which can't really be predicted.
Another consideration is the computer system's shielding. If it's shielded well, an RF signal would have to be very strong, or very close to effect the computer at all.
And a final consideration. I personally don't think I would find what your suggesting very funny. I've got enough computer related problems with out the help of some idiot playing games.

What the hell is wrong with communicating via the spoken word. Yes humans have been doing it for thousands of years, but we kept this form of communication for a good reason, it is efficient. I mean if CW mode was the most efficient mode of communication we would walk around carrying keys with speakers attached to them.

Now don't get me wrong. CW has its usefulness but voice communications are much more simple. Their is no "translateing" voice communications, but you have to "translate" code. Anyway that is my two cents worth.

Thanks for the quick post Doc. I juess I will just need to wait
it out. I sure wish I had got the extra before they droped the 20
wpm requirment. I have been active on CW for years and am above
20 wpm. I just simply dident have any need of the few herz added
for the extra class to use but when they changed the requirments
and if I wanted to upgrade after April 15 it would have required
taking the advanced test again along with the extra class test in
the same test. I asked about taking the 20 wpm test before 15
April but the VE team said that there was no need and were from
that date on only giving 5 wpm tests. Oh Well! Thanks again and

So just exactly what is wrong with normalizing relations with Cuba and
ending the long term tension? You catch more flies with honey than with
vinegar. The "Cold War" is over -- get over it.

William,
'IF' filters come in various 'widths'. Wide filters for
AM (6Khz), SSB filters (3 - 1.8 Khz), and CW (.25 - .5 Hz).
These filters are like looking through a 'hole' at a signal.
A wide 'hole' lets you see a wide signal, a medium size 'hole'
lets you see a medium size signal, and a small 'hole' a small
signal. AM signals are 'wide', SSB signals are 'medium', and
CW signals are 'small'. Thats a very basic description of
what filters do, and there's a lot more to them.

Are you waiting on the license to show up in the mail or in the FCC
database on the internet ? Nevermind, just checked the internet and it
did not show up there either.

Unless something is covered up, you should have already seen it on the
internet.
Maybe the VE team lost something in the paperwork.

Privately-owned Palmyra Atoll, KH5, owned by the Fullard-Leo family of Honolulu, is being sold to the Nature Conservancy; The U.S. Fish and Wildlife Service hopes to buy into the island, too. The sale price was not disclosed.

The NC plans on using the atoll as a wildlife refuge and small-scale ecotourism operation (making DXpeditions easier to arrange).

The atoll is located 300 miles north of the equator and about 1000 miles south of Hawaii. Due to being in the Inter-tropical Convergence Zone, it receives about 175 inches of rain per year, or about one-half inch per day throughout the year.

See www.honoluluadvertiser.com, Sunday edition, for the entire article.

elian@no-boat.com wrote:
> What happened to the old ARRL.????
> now, it's just a poor publishing company.!!!!!!!!

Well of course the League is a publishing company. On January 29, 1915, the Connecticut Secretary of State recorded the incorporation of the League under the following three articles:

"Article 1. The name of said corporation shall be The American Radio Relay League Incorporated.
"Article 2. The purposes for which said corporation is formed are the following to wit: The promotion of amateur radio, the organization of amateur radio stations, the promotion and regulation of amateur radio inter-communication, and the relaying of messages from station to station, and the printing and publishing of documents, books and pamphlets necessary to any of the above purposes.
"Article 3. The said corporation is located in the town of Hartford and the State of Connecticut."

Lucky for us that second article includes printing and publishing:
We participate in a self-taught technical hobby/service; not a day should go by without us gaining new knowledge with respect to electronics. The only publications I have always been able to turn to when questions arose which needed immediate answers were the League's pubs.

For some 85 years the ARRL has produced a handbook written so that even a novice can learn and understand from it. The government thought so highly of the Handbook that it was used to train military communicators during WWII. For the longest period, the Handbook was the greatest selling technical book ever published, in and out of ham radio.

During the 50s when SSB was finding its way into ham radio, there was no pub one could turn to to learn about this new mode except the League's SSB Manual. Also during that decade the FCC relaxed the regs regarding mobile operation - no one else published a mobile manual except the League (1955).

To whom could you turn to for the great ideas and techniques that appear in the Hints and Kinks booklets? Propagation and antennas: The Antenna Manual. Who else in the 60s produced a VHF Manual? And when that VHF crowd began exploring FM: The FM and Repeater Manual. The very first book in the 80s devoted to amateur digital comms was the League's Get Connected.

Publishing affordable technical books was one of the original goals in the League's charter; for 85 years they've made information available to the

layman that was nearly impossible to find elsewhere. How in the world could you possibly find fault with this business side of the League?

Every ham shack I've ever visited in the last 30 years has had many League pubs on its bookshelves. We are (or at least were) a group with a voracious appetite for reading and learning. Luckily, the League has been able to feed us what we most desired.

Ham radio and reading are inseparable; and it takes a business to do what the League has accomplished.

P.O. Box 270143
Hartford, WI 53027

Phone (262) 673-9745
Fax (262) 673-9746

Help Jews For The Preservation of Firearms Ownership (JPFO) tell the truth about how the Anti-Defamation League lies about Militias, law abiding firearms owners and Judaism.

Please help distribute the following FACT SHEET! -- PEOPLE MUST KNOW THE TRUTH!

ADL LIE: Militias threaten you.

JPFO FACT: The ADL reports on militias offer virtually no facts -- hard evidence, documentation -- to support the ADL's allegations that militias threaten public order. Why are the ADL's reports nearly empty of references to newspaper articles with verifiable specifics as to date, place, time, participants, etc.? The ADL's reports suggest that a tiny minority of militias is run by neo-Nazis, racists, or other bigots. Why should the doings of a tiny, nasty minority be a reason to condemn the vast majority of decent, law-abiding militia-members?

ADL LIE: "Gun control" makes you safer, at the cost of "minor" inconvenience, e.g., permits, waiting periods, registration bans on, and confiscation of, some firearms and magazines.
JPFO FACT: The down-side to "gun control" is genocide, and mortal peril to those in the U.S. armed services, who have recently been deployed overseas thanks to "gun control".

In this century there have been at least seven major genocides in which at least 56,000,000 persons, including millions of children, have been murdered by officials of governments "gone bad". The seven cases are:

1915 - 1917 Ottoman Turkey, 1.5 million Armenians murdered;
1929 - 1953 Soviet Union, 20 million people that opposed Stalin were murdered;
1933 - 1945 Nazi occupied Europe, 13 million Jews Gypsies and others that opposed Hitler were murdered;
1948 - 1952 China, 20 million anti communists;
1960 - 1981 Guatemala, 100,000 Mayan Indians Murdered;
1971 - 1979 Uganda, 300,000 Christians and Political Rivals of Idi Amin murdered;
1975 - 1979 Cambodia, 1 million educated persons murdered.
TOTAL VICTIMS: 56 MILLION!

In every case, there was on the books before the murdering began, at least one "gun control" law, sometimes the last of a series. In five of the seven cases, "gun control" was first enacted by a regime that came before the genocide regime -- sometimes decades before.

Most genocides unfold without outside intervention, except after the fact. For example, during World War II, the U.S. government absolutely refused to bomb the rail lines leading to the Nazis' main murder camp, Auschwitz, in Poland. Had that been done many lives might have been saved.

The ADL's strategy -- of watching hate groups and urging ever-more severe" gun control" -- has a lethal flaw. If vigilance fails, and if a hate group seized control of the U.S. government, prior enforcement of "gun control" will ensure the hate groupies can easily pile up mountains of corpses.

Those who say, "It couldn't happen here...we would never do that ... ", are quite wrong. The U.S. government took all but the last step of a major genocide just over 50 years ago. On 19 February 1942, President Franklin Delano Roosevelt signed Executive Order No. 9066. Under that order, some 125,000 Japanese-Americans -- 70% of whom were U.S. citizens -- were forced to leave homes and businesses on the west coast of the U.S. and were sent to places that the New York Times of that era called "concentration camps". That Executive Order was affirmed by Congress in the form of a public law at end-March 1942. The Supreme Court ultimately concurred that these deportations were legal (Korematsu v. U.S., 1944).

U.S. armed forces have recently gone to Haiti ("Gun Control"Law, 22 Dec 1922, amended 1 Oct 1980), and to Bosnia (ex-Yugoslavia "GunControl" Law, 17 Sep 1964) to try to rescue people made helpless thanks to "gun control". Had we simply shipped rifles to the Haitians, they likely could have freed themselves from their murderous government. U.S. troops may be needed to rescue the Bosnian Muslims, because an arms embargo keeps them from defending themselves against Bosnian Serb "ethnic cleansing". Why does the ADL back a policy, "gun control", that forces U.S. soldiers, sailors, marines, and flyers to go in harm's way?

ADL LIE: Judaism and "gun control" go together.
JPFO TRUTH: "Gun control" violates and subverts Jewish Law. The sanctity of life is a core Jewish value. By promoting genocide, "gun control" poses a clear and present danger to the lives of decent people, everywhere.

Life is so precious that under Jewish law, there are only three things a Jew may NOT do to save his/her own life:

a) commit murder (willfully take an innocent life);
b) bow down to idols;
c) engage in prohibited forms of sexual activity.
Thus, a Jew threatened with death unless he eats pork (prohibited toJews), must eat the pork, if doing so will save his life.

From the sanctity of Life comes an imperative to safeguard Life. Thus, it is written in the Talmud -- the 70-volume Code of Jewish Law -in at least three places, "And the Torah says, 'If someone comes to kill you, arise quickly and kill him.'" The Torah is the Five Books of Moses; this injunction is rooted in

Exodus, Chapter 22, Verse 1. This injunction occurs twice in the section of the Talmud dealing with Blessings (TractateB'rachos), on pages 58A and 62B. It also is found in the section of theTalmud dealing with Administration of Justice (Tractate Sanhedrin) page 72A. The contexts are all different, but the message is consistent: forJews, self-defense is an individual duty. As nothing in the Five Books of Moses, or the Talmud, is ever repeated without a reason, that this injunction is three times repeated suggests it is a powerful injunction, indeed.

History shows clearly that the biggest murderer -- of Jews and of other minorities (ethnic, political, linguistic, etc.) -- has NOT been hate groups,but governments that have "gone bad". To varying degrees, these murders of Jews occurred because Jews neglected to learn and to practice our religion's teachings which mandate self-defense. We have paid a ferocious price for this neglect. Millions of lives will be saved if Jewish law onself-defense is faithfully followed.

ADL LIE: JPFO is a danger to Jews. The ADL lies about JPFO's mission and research (See letter by Abraham Foxman, ADL National Director, to the Editor of the New York Times, 21 May 1995). The ADL says it fights anti-Semitism and neo-Nazis.
JPFO TRUTH: The ADL dismisses JPFO research that shows the U.S. Gun Control Act of 1968 (GCA '68) likely is based on the Nazi Weapons Law of 18 March 1938. Nazi laws have no place in America. Yet, the ADL backs GCA'68 and advocates further restrictions on firearms-ownership by the law-abiding.

JPFO has a new bumper sticker called ADL LIES. We would like to get 1 MILLION or more of these on firearms owners automobiles, campers and homes. The sticker is white with red, blue and black letters. It is 4 and1/4 inches high X 14 inches wide. Large enough for the ADL to see from their headquarters at the United Nations Plaza, New York.

Stop the Lies -- Destroy "Gun Control" Buy and Display this Bumper Sticker Today!

Agreed.

I'm really beginning to wonder if the FCC is really monitoring 3950 on a regular basis, as they claim. If they WERE, then there would be no need to send reports and affidavits to the FCC. The FCC would already know about the incident(s) in question.

Heck, if I had the proper DF equipment, I probably could have nailed ALL the jammers on 3950 by now, even though I don't listen to it every day.

Yeah i concur. It doesn't seem that they are monitoring at all or very little. You could have caught them all, problem is good DFing equip. is sooo damn expensive. If Castle and Visser did jam, then let the chips fall where they may. If it's just an interpretation, sent in by affidavit then I have a problem with it. You and I both know that sometimes "interpretation" is everything. There have been instances on both sides that may or may not be called interference/jamming. I know Riley will do what's right given evidence. If there is none, or it's weak, I wouldn't expect a ticket pulled.
But who knows.

On Sun, 7 May 2000, it was written:
> It is not that the old timers in this hobby are ignorant. It is just that
> they know so much that is not true.

Actually, I must disagree. I overheard two people licensed in the 1980's or earlier, discussing (this week) whether or not a certain call, KR4xx format, was valid. They were in Southern California ("6-land").

KR4xx's were issued back in 1996 to the advanced class. Region 4 made it into the KV4's before restructuring took effect (I show KV4FB as the last one issued in that area).

Had these guys bothered to look in a recent callbook (paper or the internet), or even on a "recently issued" list, they would have found that the call they heard was in fact valid - but no: They'd rather discuss it than bother to look it up. Here's your FIRST case of ignorance - I leave it up to the other 700,000 or so to find case two.

There was a famous murder case that occured on Palmyra, with ham radio being involved. I think it happened around 1988. The complete story is revealed in a paperback novel, titled "And the sea will tell", authored by Vincent Bugliosi, the prosecuting attorney in the Manson murder trial. The novel contains a lot of photos of the atoll and shots of the victims and murderers on the island. It's a very interesting story, and at one point was the object of a made for TV movie. Don't know the publisher, but if you like true murder mysteries, check it out. w9Sox

We can only hope The Amazing AlGore does to the gun lobby what Komrade Klinton has done to the cigarette industry. Nothing. It's eyewash.

Cigarettes are as close as your corner store. And tobacco price supports are as Democratic as food stamps. So let's not get excited that Komrade Klinton is going to eliminate lung cancer in our life time.

Maybe we could see price supports for ammo like price supports for tobacco. Neat. 50 rounds of 30.06 Black Talon for the price of a pack of Winstons. What's not to like.

One stop shopping here. Go to a gun show. Buy ammo from the dealers. Buy cigarettes from the concession stand. This is STILL the greatest country on earth.

3818. Re: What's up with Sister Stair??

Innn-correctumundo, Radiosigs. A.A.Allen was the drunk. Died of cirrhossis years ago. Actually, Stair is something of a health nut. The "brothers" raise fresh veggies and eggs, etc on the farm, and the "sisters" cook it for them. Organic farming, if I'm not mistaken.

Then the question .. what else is he farming there that causes him to see the future so .. un-clearly? Nahhhh .. not Brother Stair. Surely not. Say it ain't so.

Bullshit.
I wouldn't start hating cars if some relative who drank irresponsibly died in a DUI wreck - nor would I hate beer if some drunk driver killed a relative. Know why I'm a gun-right activist? Because my elderly mother and I were stalked a couple years ago by a convicted felon and mental patient with 40+ local arrests, 12+ for breakins. (We'd never heard of him before; he does this to random victims.)

The new owners intend it to be kept as a protected nature preserve;
apparently there are certain species of plants and animals that
occur only there and no where else on earth. The previous owners
have been excellent custodians of the atoll since 1922; over the
decades they were offered untold amounts of money by developers,
which they turned down with no hesitation.

This balloon launching from southwest New Hampshire will drift roughly
along the border of New Hampshire and Massachusetts as it moves toward
the coastline not too far from Boston. The coverage could easily
include all of the New England states and beyond at its peak altitude.

Foxhunters/trackers could well enable the quick and successful
recovery of this balloon payload.

Full GPS telemetry will be transmitted, as well as balloon measurement
data. It may also be possible to connect to the launch crew by
packet through the balloon.

We have at HABLIC a CAPSAT coverage map based on expected line of sight
range, as well as all the relevant data and handy links for these upcoming
projects (check the nice CAPSAT webpage for detailed packet procedures).

May 9 CAPSAT southern New Hampshire
May 13 Delaware Rockets for Schools Delaware
May 13 or 14 SkyQuest experimental launch eastern Massachusetts
May 20 or 21 SkyQuest 3 eastern Massachusetts
May 27 BEAR 1 Alberta, Canada

If an area is designated as a "wildlife refuge" might that not place it in
the same category as national monuments, designated historical sites, etc.,
that require an EPA Envionmental Impact study before an Amateur Radio
station can be established there?
That would seem to make it *more* difficult to arrange DXpedtions, if
studies would be required.

Oh...now I understand what's going on. I'm in a loop with the cream of the crop-I mean the greatest hams to ever tap a key or grip a mic and something was bandied about which I thought I understood but really didn't until now. I just performed my "Holliganisms" which means I went to the RAIN website and did something called DOWNLOAD Riley's weekly report which outlines the awards presented by the FCC to the ham community at large. Yeah, right.

Now as I said something was being bandied about or heavily discussed by the boys and it concerned the use of phonetics. From what I gathered I thought that using them could lead to an NAL but my interpretation was that of my own sordid brain rather than being led astray by anyone. Obviously I was mistaken based on what I just heard on streaming or flooding real audio. And when the light goes on flashing "buffering," does that mean my Apple has a headache?

For instance if I come on to call CQ using "This is Alfa Foxtrot Two Yankee" it's incorrect because the FCC never issued me those phonetics. Instead I was issued A F 2 Y and therefore I'm expected to use them. But from what I surmise off RAIN is that I can use my phonetics to augment, not to replace my standard call. To facilitate understanding by the person at the other end of my antenna is then okay and once he or she understands my call then it's unproductive and maybe even wrong to use the phonetics. Why I don't know except that such protocol does not fit the paradigm set forth in part 97 which I'll re-read. I suppose it's based on Riley's penchant for being a stickler to details or is a dickler for stetails? Whatever the case, it's no great shakes nor a big deal and unworthy of getting oneself in an uproar over. Then I remember someone mentioning that Youngblood uses the tagline, "Worldwide Mobeeeel" which apparently is acceptable in light of the other crackdown. Even though I can't stand the guy I don't see where it's wrong so long as it's prefaced by "This is K T 4 T R" instead of "Kilowatt Texas Four Texas Radio." In the meantime we can all hope he comes on with "Kilowatt Texas Four Texas Radio" and gets hits with a million dollar forfeiture for which he'll have to depend on Regis Philbin to pay and that's my final statement on that subject.

I also heard about Dave Castle and Art Visser getting letters about conduct on 3.950. I noticed that Riley did mention the Liberty Net by name but not in the context of their having reserved anything. I suppose his gripe deals with the Hoosiers' motives or their contesting the frequency while the net is under way. I never have spoken to Art but I have to Dave and time and time again I've pleaded with him to stay the hell away from 3.950. It's a trap as was 14.313 for me. I wised up and hopefully they will too. I can't blame Dave and Art for being riled over the misuse of a frequency by a group of goddamned anti-American sociopaths but fellows keep in mind that one of the rights we have is that of to hate which Vic and his plicks do quite

well. But then again something contradictory comes to mind. If they can sit on a freq. and get away with tossing venom at immigrants, Jews, the government, Negroes, Hispanics, the Holocaust and more while knowing it will cause an uproar on frequency which contravenes Riley's demands, then why can't I go on 14.313 and start a fight without fear of having my license revoked? How about it, Riley? Why the double standards?

And how about the two guys who got hit with fines of 8Gs each, tried to get them lowered and failed? Think about it guys. EIGHT THOUSAND BUCKS! You think it's worth that much to tick off Riley, the Commission or both? As Puck said in Shakespeare's "A Midsummer Night's Dream." WHAT FOOLS THESE MORTALS BE.

And lastly 25 Puerto Ricans lost their licenses for failing to retest on the island. Goes to show the long arm of the law extends all the way into the Caribbean. Colegas, lo siento mucho pero ustedes tuvieron mal suerte!

Nope, you can send in a form 605 with all of the sections relevant to the amateur service filled in. It's still possible for a single individual to use paper.

Doc Why dont you get off your fat ass and GET A JOB. Something that will take up your time so you wont be doing these ramblings.
You might try listening on 14.280 and hear a group of guys talk about the holocaust being exaggerated. The claim to be part of a group called the "posse comatose ?" or something like that. Being so aware of neo nazi's as you are you are falling down on the job protecting us from the neo guys!! Get off this internet insanity and LISTEN to these guys. They say the jews and the blacks are evil. They claim to have proof that the holocaust is a myth. I was waiting to hear YOU yelling at them. where are you Doc

If your still have your orignal Novice license you might want to check the length it was valid. Mine is from that ancient era and says 2 years non renewable. Then they made it 5 years renewable and then 10 renewable.

While I do not have much use for CW, it is fun to drag the QRP rig out into the woods every fall and see if I can still talk to the world on 2W.

Not to fan the flames any more, but SSTV was invented by a University of
Kentucky grad. He did his doctorial on it. Use the (then ham) 11Mtr band.
In 1957 or so it was the newest technology. I have read and should have a copy
of his desertation. Interesting given the technology he had available to work
with.
Do a net search on Capehorn Mcdonald sometime. I
only hope I have spelled his name correctly.

The CW filter is used to separate out the PSK31 stations who may be
too close together for good copy when using the SSB or PACKET
settings.....(c;

PSK31 is only 35 hz wide, a very great use of bandwidth, albeit very
slow by today's computer standards..... I say this as my bot is
stripping music from Airnews.net at about 190KB/second.....

Nah, it's long gone. All I remember is that it was expired when I got back. The FCC office didn't give a S--T that I'd been in no position to do anything about upgrading and the person on the phone made a snotty comment about govt. killers not getting any special treatment. I suggested that with an attitude like his he needed to be careful what he said to "govt killers" and hung up. A couple of days later I got a visit from an FBI agent concerning "threats" I'd made to a govt. employee. He was a much more reasonable person, and after listening to my story, told me not to worry about it, SHOOK MY HAND! and said thank you, and left. (If it sounds like that meant alot to me, it did!) But I figured it would be a good idea if I avoided the FCC for awhile. No matter, I'll get my upgrade now on my own merits.

Hi, Chris. One of the leading web sources is Bill's Two Way. He has a great reputation and excellent prices.

For more info, drop by alt.radio.family, which is a NG devoted to FRS/GMRS topics.

In making your selection, be alert to repeater capability if that is important. Several GMRS models are simplex, only.

There's a lot more than one sentence in my first post. Why stop reading it at that one sentence? It simply states that during a period of time, I was put off upgrading. The period of time is coincident with Baxter's broadcasts. The sentences that come after it in the first paragraph elaborate on the period of time that the first sentence alludes to, and describes the reason I was put off, and should allow both of you to get the questions you two have here answered.

On the other hand, I'm certainly not objecting to being flamed as a 'poor baby', because I shouldn't have let noisy, CB-like ham bands put me off upgrading all those years. But I did, and now I'm crying in my soup over 14 years of missed enjoyment working HF.

Voice is a lot easier.
But there are situations where CW is much better.
I have a little 2 watt QRP 40/80MTR rig that I can "talk" much further on CW then with voice or RTTY/ASCII/SSTV/FAX.
It is very simple.
And it is fun.

3852. Re: What's a CW filter for?

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-09 00:00:00 UTC
From: John smith <Someone@replay.com>
Message-ID: <8f95j9asl1@bob.news.rcn.net>
Source record: 111545

Thanks all for the input. I now know what they are and where they go in the block diagram.

But on to my second point of confusion:
Do I need one? Specifically, what would be the effect (from a listening/transmitting point of view) of having one vs not having one?

Since the filter (SSB, for example) is sold as an option, I assume it's not really needed for communication. So, what will be the observed effect of installing one? Will the received signal become more clear (less noise)? Will the signal be more easily distingushed from other, adjacent, signals? And is it for receive only or will it affect transmissions, too?

Thanks again for taking the time to help a newbie.

Message-ID: <39182159.34676D8@Telocity.com>
Source record: 111548
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The Commonwealth of the Bahamas has evidently revoked its current reciprocal licensing treaty with the US while moving licensing duties from BATELCO and returning amateur licensing to a government agency, the Public Utilities Commission.

According to some recent information, all current licenses must be re-approved by the PUC before June 24th or they shall be considered expired. The exact process for getting re-approved is unclear.

If anyone has more information on this situation, I would appreciate knowing it.

Thanks

-Jon NU4JJ

3856. Swan SWR-1A meter question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-09 00:00:00 UTC
From: qdw <qdw@email.msn.com>
Message-ID: <uRaRpTcu$GA.307@cpmsnbbsa04>
Source record: 111549

I recently bought a small SWAN SWR-1A Meter. Unfortunately there was no manual or instructions with it.

If someone can help me find instructions for it I would appreciate it. However, barring that I have the following questions I would like to get answers to:

1. What Frequency range it is made for?

2. It has 2 meters with a 0 to 10 dial in between the 2. What is the dial for?

3. The left meter range is marked 0 to 100 above the scale and 0 to 50 below. And I noticed it is marked "SET" over the 100/50. I guess this is for calibration, but I don't know how to calibrate it. Can anyone assist on this?

4. Assuming the Power meter is either 0 to 100 watts or 0 to 50 watts, how does one select which to use? (Maybe the dial comes into play here).

Any other information as to how to use the meter would be appreciated.

You can respond here or directly to my email address at qdw@email.msn.com .

Thanks,

Q. Don Wolfe

3858. New Resource For Investors

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-09 00:00:00 UTC
From: meir@investmove.COM
Message-ID: <8M1O73TS.31P71Z13@investmove.com>
Source record: 111551

Hi,

I would like to introduce our new site and kindly request
that you add InvestMove.com <http://www.investmove.com>
to your Links/Resources page (or please forward this message
to the person who is responsible for maintaining your Web
site). This will provide your visitors with a very useful
and information packed resource. InvestMove.com allows
investors and analysts free access to vital stock market
information.

In recognition of its usefulness, InvestMove.com has been
awarded recently with the prestigious USA Today Hot Site award.

InvestMove.com features a unique tool that allows visitors to
enter a company symbol into a search form and obtain a customized
page covering more than 30 major information categories about
that specific company. The information includes: stock quotes,
stock performance, earnings estimates, stock valuation, company
performance, analyst opinions, broker reports, company profile,
and much much more.

Another feature of the site is an investor resources directory
that includes links to the best investment sites on the web.

Linking to InvestMove.com helps you to add value to your website
by presenting your visitors with a useful free investor resource.
Your visitors will find here all the tools and information needed
to make educated investment decisions, and it's all completely free.

In addition, links to relevant and popular sites are known to
increase a Web site's "popularity ranking" in some major search
engines. In other words, linking to http://www.investmove.com may
actually help increase your Web site's rank in certain search engines
that record this external link.

Thank you in advance

Meir Liraz,
InvestMove.Com

Now that is a statement I can't argue with. If it's fun for you, something
you enjoy, then go for it!! I intend to upgrade to General in the next
year and will probably get up to at least 10wpm code speed as a point of
pride. Already bought a Kenwood TS-440S/AT. The only problem I have with
CW is when somebody tries to beat me over the head with it to display their
superiorty.
Mark

Well, because CW is so good, because it can be used in emergencies and all,
lets make all hams learn symaphores, marine flags, and how to shoe horses.
After all, in an the right emeregency all of those tidbits could be usefull.
A special not for the satire impaired: This was a JOKE!

While I have been a ham for 30 years, I still marvel at the BS that claims
CW keeps out the riffraft. Not that anyone has asked me, but I would much
prefer to deal with a person who technical skills are a little dull, then
a whiz that is a jerk. IT is easier to help someone learn then to help a
jerk be nice.

Yea, sure.

Mark:
Are you looking for 12 VDC or 117 VAC? If 12 VDC go to your auto parts store, they have them that are auto reset with nice post lugs, and tabs for mounting. If you are looking for 117 VAC, you can use a breaker made for a panel box, but you will either have to mount it in a small panel box, or find a way to mount it. I am talking simular to square D or GE. Good luck.

When that happens, I fire up my SCS PTC2e at 60wpm CW in
keyboard mode. :-)

Incidentally, PACTOR II works as well as (or better than) CW
at QRP levels and nobody tries to "display their superiority".

Scott,
I took the "old" extra test on April 8th and did a "paper work only" session on April 15th. My upgrade was issued May 2nd. I think it mostly depends upon how fast the VE's get it sent up to the FCC (they have 10 days). I know that there were at least 75 and probably more people upgrading in all upgrade levels at the "paper work only" session I went to held by the W5YI group so I could see why it would take a while to get it all ready to go.

I also requested a systematic change in my call sign, but somehow that was overlooked so I got my Extra on my old advanced call (KM5BP). I requested a new systematic call through the ULS online and got my new call the next day. Boy that organization doesn't believe in bureaucratic red tape.

Good luck,

Don Wolfe

Comm. Manager Software for PC & ICOM

I'm looking for your comments on your favorite COMMUNICATION PROGRAMS for ICOM radios and PCs. I'm using a CI-V converter to the serial port. Hopefully the software will allow me to communicate frequencies and modes and maybe squelch settings to the PC. Going the other way, maybe the software will record frequencies to my logging software. I'm using LOG-EQ. It seems to work well on Windows and DOS platforms. Allowing KEYBOARD CONTROL of the radio is of primary concern. Do you know of any DOS programs that will accomplish this? They must be shareware, or freeware, or have demo's to try.

Thanks, and 73's from Daveyjane.

PactorII may well work better, but with my QRP rig, all I need is it, an
antenna and 12V and I am in business, no PC/TNC/etc.
Not that I am opposed to PC/TNC/etc, it is just fun to do somehting simple
and fun. No reboots. No QRM[at least from my end]
Are there any programs to allow a modest [P233/MMX Creative/Ensoniq
PCI sound card] to run Pactor II?

Look at Section 2 of the main form, changing the address counts as a modification of the license, thus for just changing the address, one would select MD for the desired action on the Main Form. The new form does not require you to list your date of birth for example, which I find amusing, but then again it does require a TIN or SS#.

Except that none of those "modes" are in use on the ham bands.
Just whom would you communicate with using "semaphores, marine flags,
and horse shoes" on the amateur frequencies? Yet CW rivals SSB as the
most popular HF mode.

>While I have been a ham for 30 years,

Really? What was your first call? I'd like to check my 1961 Call Book.

>I still marvel at the BS that claims CW keeps out the riffraft.

No one's claimed that CW keeps the riff-raff out -- just listening to
certain 20 and 80 meter frequencies shows that even the riff-raff can
learn code. But you won't hear any of the riff-raff on the low ends of
the HF bands. The *use* of CW is the filter. Can you name any ham who
has received a NAL from the FCC for an intentional rule violation while
operating CW?

Note that if your CSCE and your upgrade were processed by different VEC's, the delay could be in verifying the CSCE that holds the element credit.

When I first got my Novice ticket in 1979 (age 15) I had been a CB-er previously. I studied and passed the exam. I used CW exclusively. I felt I made some headway past CB. Does that make me any less of a ham, am I still just a CB-er to the OMs?

Reading the ignorance and childishness in this and other ham NGs has made me question whether I really want to return to the hobby. You want to attract new and younger hams based on the merits of what you do, clean up your own acts first, how about...

Amateur Radio is suffering from the same malady as the computer hobby. I have for a long time been a member of our company computer club and it is full of old guys now. Nearly everyone is retired and it is very hard to find people who can run for the top office (they must be active employees). Everyone thinks of radio and computers etc. as an appliance. It is something you turn on and use and don't tinker with. Many cell phone users use radio daily and never realize that they are. I became interested in SWL when I was young back in 1964 when it was a big deal to receive signals from far away places. Now I routinely converse with people all over the world on the news groups and think nothing of it. Until we can make the electronics hobbies look glamorus again we will not see a big influx of new members.

John,
Most radios come with a SSB filter, probably on the order of 2.4 - 3.0 Khz. This is sort of the 'normal' bandwidth for a 'standard' filter for SSB. There are narrower ones. Narrower filters make the recieve 'window' narrower, cutting out some of the 'extra' space on each side of a signal. SSB voice signals are a minimum of 3 Khz wide. The 'edges' of a SSB voice signal can be 'cut off' with little loss in inteligibility. The bigger a 'bite' you take off the edges, the more inteligibility is lost. There is a limit, if you want to 'understand' what your hearing. Once you get below about 2 Khz, the 'tone' of the voice signal starts to change, it gets 'tinny' (remember the song 'Winchester Cathedral'?). If an adjacent signal 'overlaps' the signal you want to listen to, you won't get rid of it. You can get rid of some of the adjacent signal, but not all of it.
Filters do not make a signal more 'clear'. It will get rid of some of the noise that 'leaks around' the signal you want, but not QRN.
One option you might consider is that filters can always be added to your radio later. Try the standard filters and see if you can 'live' sith it. If not, get an optional filter.
Another good thing to know is that the radio manufacturer's filters are not the best in the world! There are after-market filters that are much better (and in most cases, cheaper!).

========================
What I did say originally is:
====================
Huh -- as of April 2000 there are 678,539 US Hams
(http://www.speroni.com/FCC/Licenses.html)
In 1992 there were 524,782 US Hams (RAC CALLBOOK)

Hardly dwindling fast

The current US population is 274,745,387 (http://www.census.gov/)
The US population in 1992 was 254,994,517
(http://www.census.gov/statab/freq/99s0002.txt)

Would you care to do some math about growth rates?

Filters do just that -- they filter out unwanted stuff. In the case of radio communications, there is unwanted stuff in the form of atmospheric noise (lightning, general hash), man-made noise (electric motors, electric lamps, etc.), and signals other than the one you want to hear. All this stuff can be filtered out.

A receiver sucks in a broad range of frequencies. Thus, a receiver is receiving the signal that you want to hear plus about a zillion other signals plus hash, hiss, trash, noise, and all sorts of other bothersome crap. A filter on a receiver functions to reduce the bandwidth -- that is, it establishes a narrow electronic window through which only the signals in that window can pass.

FM signals are very broad, thus, they need a broad filter to let through the desired signal. AM signals are less broad, SSB signals even less and CW signals are extremely narrow. Thus, you can put into the receiver a very narrow filter that, if used to listen to FM, AM, or SSB, would allow no intelligible stuff through -- but it would allow the narrow CW signal to pass.

Decent receivers will have filters for FM, AM, SSB, and CW. Better receivers will have FM, AM, SSB, SSB-Narrow, CW, CW-Narrow, and CW-really narrow. Even better receivers will have a full complement of filters plus some form of passband tuning that allows you to tune the passband of the receiver, further reducing interfering signals. More recent receivers have digital signal processors that really sharpen things up -- I do not have a clue how DSP works except that it has been explained to me as Black Magic.

In addition to atmospheric and other naturally occurring noise and trash, there is unnatural trash on the air -- Rush Limbaugh, 3950, Art Bell, 14.313, and the like. No filter in the world except for one's natural intelligence can remove that stuff.

John,

I didn't start the chain of posts here, as the Elian matter transfixed the entire nation. Initially, I skipped the posts here until they could not be avoided any more than the protests here in South Florida.

That's when I chanced into Jose Basulto, recognizable as head of Brothers to the Rescue. I threw all my negative opinions at him, seizing the opportunity to become informed. For an hour or so, he recounted everything from dropping leaflets on Havana (an afterthought when his planes were pursued in international airspace by the Cuban Air Force) to the downing of two of his planes and the death of two pilots.

Surely this is stuff anyone posting would want to know. Moreover, there are hams here encouraging me to write an editorial for the Miami Herald as the ultimate contribution, but I'm still on the fence.

Meanwhile, all over Miami, American flags are fly from automobiles as a show of patriotism, a moving display. When do you remember seeing American flags flying on automobiles?

John, a little enlightenment goes a long way.

Let's see if I understand this.

A 6-year-old child is taken in and sheltered by an uncle with four DUI convictions who, after living in this country for over ten years, still needs a translator to talk to the media.

The community in which the uncle lives has formed, over the years, their own foreign enclave in the US of A, acting as a law unto themselves, violating the domestic airspace of an sovereign nation.

The Attorney General of the US goes personally to meet with the uncle who defies, not her, but court orders and immigration law.

Meanwhile, the mayor of your fair city announces that he will not be responsible if violence breaks out.

Back in 1965, when I was a college student in Alabama and George Wallace stood in the school house door in defiance of court orders, he was denounced by all and sundry. And I am supposed to cheer for the uncle and his mob??

If you do write an article, how about you tell the funny uncle to put down the bottle, get a job, and learn English.

Curt,

That is how I felt before the Elian matter. If you lived down here and witnessed what we do, I know you'd have a different opinion.

Jose Basulto, head of Brothers to the Rescue, says that they cannot compete with the Clinton spin machine. I agree.

I had always thought Basulto an angry man from Cuba who exemplifies the movement. But when I sat down with him, he was the opposite: cool, calm, reflective, friendly, insightful. You see, it is fashionable for the media to prod him, then to show a pressured Basulto in ten second sound bites trying to answer with ten minutes worth of information. I don't believe they do not have the resources for even one PR employee.

Talking with Busalto one on one was astounding, proving the prejudice I was carrying--and no doubt carried by many. Where did it come from, I keep asking myself, since I try to be fair minded with all.

>Yes, yes, Jeff. Thats solar noon.

I'm not doubting that you saw the phrase "solar noon" somewhere, but
you surely didn't see it in any work on navigation. The bible of marine
navigation, Bowditch (continuously published and updated for almost 200
years) makes no mention of "solar noon" but certainly does fully define
and explain the use of Local Apparent Noon.

Again, its importance can't be overstated -- LAN practically gives you
your latitude for free; no timepiece needed.

Doc provided the proper "spin" on his answer to your question,
not a smart ass answer.

Susceptibility to EMI, ie. "keying" a HT close to a PC
can cause unpredictable results. Sometimes, catastrophic!
Clock frequencies, bus speeds, ect are similar to many frequencies
in the amateur bands, and can be misinterpreted by the logic if threshold
levels are exceded. You are lucky that the hard drive didn't crash...

Bottom line is that producing a strong EM field close to a PC will produce
a wide variety of failures....over a few tens of volts/meter will do the
trick...
easily produced by most HT's...

Try it on your own PC first :>)

> content in it.

Although there certainly could be such a beast, I have never seen one. The rotator (and control box) circuits are so simple, you really don't need much more than what's in the manual, anyway.

Here's a free tip for working on HAM series rotators: when removing the plastic encased string of ball bearings, always keep the two plastic ends near each other. Although you will have a couple of mishaps, you will eventually learn that that procedure will help keep your balls together.

There are two kinds of hams: those who have had ball bearings on the floor, and those who have never had a HAM series rotator apart.

Here's another: although there are lots of hams who like to use the resistor color code as their scheme for remembering how they wired their rotator which is now up on the tower, a simpler way (and one that's good for wire with colors not in the resistor code) is to go alphabetical. Remember; the 2 big wires go to terminals 1 & 2 (alphabetically), and the smaller ones on terminals 3-8 (alphabetically). Even the YF or your non-ham neighbor can help you that way.

For you lads in South Africa and other polyglot places, the next challenge is to remember what language you alphabetized it in!

| William,
| 'IF' filters come in various 'widths'. Wide filters for
| AM (6Khz), SSB filters (3 - 1.8 Khz), and CW (.25 - .5 Hz).
| These filters are like looking through a 'hole' at a signal.
| A wide 'hole' lets you see a wide signal, a medium size 'hole'
| lets you see a medium size signal, and a small 'hole' a small
| signal. AM signals are 'wide', SSB signals are 'medium', and
| CW signals are 'small'. Thats a very basic description of
| what filters do, and there's a lot more to them.
| 'Doc

3899. VE6 RUM

Newsgroup: rec.radio.amateur.misc

From: EDMONTON <EDMONTON@hotmail.com>
Message-ID: <V%MR4.24095$g62.376533@news1.rdc1.ab.home.com>
Source record: 111632

I am looking for a little info on this callsign VE6 RUM.
I found a name and address that it is applied to it, but what I don't know is if this person is still alive.
How do I go about finding this info? I have done different searches on the net and can not find any recent info.

The reason I ask is that a friend of mine just passed his basic, so I did a search on this the callsign he chose and came up with a name and address. I have no idea how old this info is or who this person was.

Just looking for a little history on an old callsign.

You've, obviously, gotten into the same problem I have.....

ARRL, as my VE told me this morning, was SWAMPED with the nonsense of how this special upgrade was run. 4 to 6 WEEKS is what I'm hearing now. I wish I had turned my paperwork into our Wescars group. They already GOT their new licenses 2 weeks ago......

IF we had done it right, you would simply have been sent, automatically with our VAST array of very expensive new computers dubbed ULS at FCC, not ARRL, HQ....your new license....if you had passed the required elements that are ALREADY in that system's database since January, in my case. A simple subroutine to print all licenses to all hams that had fulfilled the new requirement would have been written by some code hacker at FCC to scan the database (it's really NOT that big, you know) and issue new licenses.

Of course, this would have BYPASSED the collection of ANOTHER $6.65 x THE THOUSANDS of hams who upgraded....which, I surmise, is a princely sum! And, more importantly in FCC bureaucracies around the country, this subroutine would have BYPASSED the desk of countless clerks whos very LIVES depend on that useless paper form crossing their desk for the appropriate stamp of approval......

Fat Chance, suckers.

Following are procedures for renewing your Bahamian C6A reciprocal license eff Apr 15, 2000. If you do not have a current license, Batelco no longer has the authority to renew; we do not know how to renew expired licenses yet.

If you have a valid current (2000) C6A license, you must apply to the Public Utilities Commission for a new license as follows:

- Send copy of front and back of current license; if the 2000 stamp is not on back of license --- include a copy of the receipt. (I'm going to do both.) Make sure you keep copies of correspondence.

- This must be done prior to June 24, 2000.

- Send to: Executive Director & Secretary, Public Utility Commission, P.O. Box N4860, Nassau, Bahamas

- It's been suggested you might consider a mail receipt to confirm it's receipt.

- Expect your license within 6 months.

If you are in Nassau, you may go to the PUC off Collins Ave, vicinity of Doctors Hospital and attempt renewal.

Terry

Wow! That's an interesting observation and you sure did get me to thinking on
whole different level. Computers and radios, and things like them, used to be
"gizmos" that were new, interesting and fun to play with. They have now become
utilitarian devices and the uniqueness, newness, and fascination with them has
now become mundane.

That's an even harder battle to come out of, as well, in terms of
keeping/getting people interested in hobbies like this. So much the more for
demonstrations of what *can* be done with amateur radio. I hate to use the
word, but we need to "exploit" the hell out of our rescue and emergency
service, and whatever else I am leaving out (I think from the perspective of
those things because that is my "bag" with radio).

Hello Everyone,

I am looking for QST magazines -- in decent shape -- from *at
the latest* the 1970's for a collection. I'm especially interested in
any issues prior to the 70's!

If you are looking to get rid of your box of QST's, I'll be
happy to reimburse for shipping and/or a reasonable cost for the
magazines.

Please email direct. Thanks!

73,
Brian, N5ZGT

Jews live in Hartford,Wisconsin? You mean cold Jews? What kind of stupidity is your post? VERY STUPID and tactless and confrontational and nothing more than a mouthpiece and springboard for suave sophisticated anti-Semitism disguised to foster a calculated schism between a great man like Abe Foxman, a great organization, the ADL, and a bunch of Yiddish nuts who advocate no gun control which is doubtfully predicated on the existence of such a moronic organization in the first place. Don't involve me and my people in any kind of a scam advocating lawlessness because if you knew anything about our Torah and Talmud you would know, for example, that hunting for sport is expressly FORBIDDEN and it holds true for Islam as well. To kill an animal for the hell of it is revolting and violates every precept of the kind of decency and compassion unseen in the animal world. Jews need more weapons to protect themselves against the greatest government ever created by man? Have you lost your mind? Your sponsorship of this rightwing Jewish cultist band of gunloving screwballs, if indeed it exists, is nothing more than a pattern of deceit, treachery, indoctrination and underlying mistrust of us and our Ten Commandments. How dare you put us in league with militants, militias and other entities who would rejoice at the downfall of these precious United States? Keep your goddamned lying filth about Jews loving guns to fend off American justice, off this board and take it to a KKK meeting or on 3.950 to convince those brainless heartless amoebae that Jews concur about the "illegal" legislation that would make it more difficult for one person to kill another. Dammit-you take out of rightfield some crackpots in Wisconsin and try to convince me and my brethern that gun control is wrong because of THEM? You belong out there in the Nevada desert because you have the brain of a lizard.

So go tell it to the NYTimes who reported FOUR DUI.

Okay, let's put the shoe on the other foot.

Mother living in the US decides that life would be better back home in China so she grabs the child and heads back to the good old People's Republic. She arrives there and dies. Extended family decides the kid is better off with them than back in the USofA with Dad. In view of your comments, you would vote to leave the kid in China with the funny uncle.

Can't have it both ways -- stay with the uncle or go back to dad. What do you say?

This is not a theoretical exercise. There are right now approx 100 cases in which a US spouse is seeking custody of a child, born in the US, but taken back to the old country by the foreign born spouse. If Elian stays in the US, then what grounds does the US have to insist on these children returning here?

Vote Republican. It's easier than thinking.

There are right now approx 100 cases in
> which a US spouse is seeking custody of a child, born in the US, but taken
> back to the old country by the foreign born spouse.

Point of law: A child born in this country is a US citizen.

Additional point of law: Since 1978 Cuban Exiles making landfall
on US Soil are entitled to asylum. Request for asylum is assumed. No
age limit. No status requirements.

In the US, matters of law have, indeed, been constructed so you
can have it both ways.

If Elian stays in the

> US, then what grounds does the US have to insist on these children returning
> here?
>
Matters of law. It may not seem fair and equitable...but it is
law. And there's the rub.

> Vote Republican. It's easier than thinking.

By all means vote Democrat. The liars will be on YOUR side.

3918. KA9FFR issue date?

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-10 00:00:00 UTC
From: Your Name <Don-West@worldnet.att.net>
Message-ID: <ckfS4.57880$WF.3226165@bgtnsc04-news.ops.worldnet.att.net>
Source record: 111500

Hi,
I was issued my original call, KA9FFR, sometime between 1979 and 1981, I think. Was not active until 1991 and was able to renew my license under the amnesty program. My original license was lost sometime after 1991. In any event, I would like to know when I was first licensed. If anyone has a call book from that era, I would certainly appreciate it if you could look it up and let me know. Please email me at w9dew@qsl.net .

Thanks for your time & 73,
de Don, W9DEW

I met a couple of KA9Lxx hams in late 1981 who were licensed in the
middle of 1981. My recollection of issuance rates would put KA9FFR
sometime in 1980. Can't help you with hard copy.

3920. Morse exercises No.22

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-10 00:00:00 UTC
From: DTC - Frank Schmitte <dtc@muenster.de>
Message-ID: <8fc3qt$5cs$1@news.citykom.de>
Source record: 111502
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr22_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr22_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr22_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

73 es agbp de Frank (DL1YDL), DL-CW-C #030
Editor of the DTC-Web-Site.

Don't give me this crap about JEWS for Preservation of Firearms Ownership because EVERY AMERICAN SHOULD RIGHTFULLY DEMAND THIS RIGHT but what has that got to do with legislating better CONTROL of weapons in light of constant misuse causing death? You reactionary screwballs are all the same. Constantly you equate legislation with confiscation and if you don't know the difference, then you haven't the intelligence to handle a gun to start with. All this stuff about legislation equalling confiscation was concocted by rightwing nuts in order to stir up sentiment against Washington,D.C. You beat the drum of lies and hope that we can't see through you and them. There will be NO CONFISCATION of anything. It cannot happen in this democracy. Even if put to a vote Congress would kill it immediately. There are millions of responsible gun owners out there who are in no danger whatsoever; you'll be able to target shoot and kill defenseless animals to adorn your walls with their heads. WOW, ain't you something! But what will happen is that laws will come into effect which will make it impossible for incompetents to buy them which is a PLUS for society. Gun manufacturers will be forced to comply with laws allowing only the buyer to use one. That's called SAFETY like in SAFETY LOCKS. For those who rebel againt such an idea, would you step into a commercial airliner whose captain just finished smoking a joint? It's exactly the same principle. When it comes to the safety of us all there should never be a compromise and saying no to gun legislation is cutting off your noses to spite your faces. The government crackdown on the cigarette industry WILL SAVE LIVES yet it's our right to smoke. Increased gun legislation will SAVE LIVES yet it's our right to bear arms.

Yes, "And the Sea will tell", a really great story and intriguing trial for the female accomplice. I believe the time frame was like 1988 or so for the trial part. I left a post regarding this film but I don't see it anywhere. Anyway, it involved ham radio to a fairly large degree as the victims had kept regular skeds with a friend in Hawaii. So if anyone wants to read a great novel, get "And the sea will tell", by Vincent Bugliosi. Bob Zuiker w9Sox>

Oh but you will because mandatory registration and licensing are two ways which will assure everyone that guns won't fall into the hands of incompetents therefore if you are one, WORRY. They are called safeguards and in case you don't understand it's complexity, it means it'll be good for you and your family too. Get it? Guns can't be treated like pea shooters or a paper clip on an elastic band. Guns, in the hands of WRONG PEOPLE, will destroy us. Guns in the hands of RESPONSIBLE PEOPLE is desirable therefore we must separate the wheat from the chaff and the sooner the better. And I'm all for target shooting to better prepare the average government-appreciative person to protect himself and his family if and when these stinking neo-Nazi militia groups decide to put their venom into action.

Matt,
You're absolutely justified in being a gun-rights activist and I have a feeling you are the type of responsible person who knows the right protocol. And it's your RIGHT to bear arms but it's wrong to enable every Tom,Dick and Harry in this nation from obtaining a gun at any time, anywhere as if he were buying a can of tomato soup. That's called raping a right!

Tell that to the fools in Britain who registered their handguns - and then
had their "democracy" confiscate them.
You cannot trust a government - this one included: I did not have a
sexual relationship with this woman means that high elected officials will
lie to fools like you - and you will believe it in the name of "it can't happen
here." From the Tuskeegee syphilis experiments to the internment of American
citizens in concentration camps just for having Japanese ancestors to Klinton's
"one-year" peace deployment in YugoNam (now in its fifth year) to the Gulf of
Tonkin non-"incident" that 58,000 Americans died in Vietnam for, federal lying
to sheeple like you is the rule and not the exception.

This Jewish lawyer has been a shooter since age 13 - when introduced to rifle shooting on a range run by the heavily-Jewish Cleveland suburb of Shaker Heights. Every Saturday, that range was full of young kids like me learning to shoot.
And this Jewish lawyer became a gun-rights activist by being the victim of a convicted felon and burglar who stalks local people at random. If he breaks in tonight to get even with me for pressing charges, the local police won't be here in the critical first seconds - and I don't hear you volunteering to protect me, either.

Well said and totally accurate. I just wonder what bureacrat will
select who gets to hold a gun and who don't. Maybe they can make it

easier. Just let those that support the Demoncrat party line would qualify.

All this debate on guns is a waste of time. The problem is not the guns the problem is the criminal element. Who, by the way, are laughing their collective butts off at this whole thing. Wanna bet who don't register their guns?

Hi Kim,

The president of our local club out here has come to exactly the same conclusion, and we are actively promoting the formation of ARES/RACES groups in our relatively new area. We are encouraging them to use our repeaters, and are putting new repeaters on the air to service the areas in greatest need. We'll see how it goes, but I think it definitely helps to create activities, and facilitate the need for the use of amateur radio.

Ok, Charlie, your no Doc, I know docors, and doctors have far more brains and common sense than you do.
Your a liberal; gun grabbing, bleeding heart animal rights nut. Are you a tree hugger also??
Read what the JEWS that know say about "registration" and "confiscation" (not legislation you idiot). Your own people know and tell you and references to the Torah are given. Read it.
As for You wanting more legislation to CONTROL the misuse. You nut, the "misuse" is intentional, they don't give a damn about laws to begin with. So making 2 more or 200 more won't stop anything with the "misuse". It's intentional. What the legislation YOU call for will do is restrict the rights of the law abiding that are not the problem to begin with. YOUR legislation will only CONTROL the law abiding. Get it??
Read the site Charlie http://www.jpfo.org you may learn something.
Charlie your one dumb son of a bitch. Read what has happened thru out history when there was registration (not legislation, idiot). The laws can be "enforced" without registration - it's been that way for over two hundred years. Your really looking pathetic. You stay out there in the concrete jungle (must be by choice) and be afraid - maybe the government will help or protect you. As for me, i can do a better job of it myself if YOU don't get your way and there is more CONTROL of the Law Abiding. Charlie, Your blind in one eye and can't see out of the other. http://www.jpfo.org

Gee.

It's been quite a while since I've read any of the amateur radio forums on USENET and I must admit that I'd thought that maybe I was missing out on something.

What ever happened to the spirit of friendship which was so commonplace in amateur radio for years and years? It seems to have all but evaporated.

The last time I can remember such furor was when the "No-Code Tech" concept was brand new.

Oh, yes, there was one more that comes readily to mind. That was when the FCC restructured the commercial licenses, eliminating the First, Second, and Third Class Radiotelephone tickets and replacing them with the "General" ticket.

Someone even went so far as to say that I didn't know anything about broadcasting because I had a General rather than a First Phone. I politely told him that I took the only damn test that the FCC gave and that he should take the matter up with them.

If someone's "upset" about license restructuring, perhaps their comments should be directed at those who are responsible, not the "newcomers" who are showing an interest in a fine hobby which, given the trends of the last couple of decades, might well become extinct in our lifetimes.

Joe, with the allegation all laid out as facts, you're buying the Clinton spin uncritically. Though no final arbiter of all the facts, I can tell you that your version is is far from theirs.

No one is advocating operating outside the law. The Cuban population here is not only law abiding but exemplary with family as well as hard working. Cubans have rocketed Miami to world class city.

No doubt in my mind that you are carrying certain prejudices fuelled strictly by the press. Maybe not all, as I'm no expert either.

But I can address Janet Reno's trip down here. I also have personal experience with Reno, who is basically an honest person. She came down here at the marching orders of President Clinton, unopen to both sides as she had declared. Cubans here bristle at the way they were set up by that trip. They never recovered from that, because they cannot equal the Clinton spin machine.

In this city, Cubans have touched off a frenzy of flag waving by everyone, as the roads are filled with flags flying from cars. You see, the Hispanic population is more zealous than most, thrilled to live in our land, honored to serve their country, indebted to the Constitution.

When Janet Reno was Dade County Attorney, I once picked up my telephone to a ranting Reno. It was her response to a column in which I was rightfully critical of her office. Above all a politician, she quieted quickly.

Well we are going to have at least 10 people there most of the
time. We will also be running a VHF/UHF station as it's a
freebie. Doesn't count towards the transmitter count.
So a empty station won't be a problem.

Come on Field Day!

Bob,

I understand that the perspective on this issue is different down in the Miami area, but isn't what you witnessed there the collective gut reactions of a group of disgruntled expats? I know that the Cuban regime is not a good one, but I favor conversion to a free-market economy and a Democracy through mutual interaction and trade. It seems that the Miami Cubans generally favor punitive actions against the home island and its people, and would even applaud a Pyhrric victory of some type that would hurt ordinary Cubans just to "get at" Castro. It is my impression that the group to which you referred ("Brothers to the Rescue") tend to seek confrontation with Cuban authorities rather than reconciliation - (ref. the airspace incursion that resulted in the shoot-down a while ago). There are times for difiance, but there are also times for letting old grudges go in order to make things better for everyone.

Phil,
An antenna makes no difference in how a signal 'sounds',
other than in strength an 'noisiness'. The characteristics
of the receiver's audio section, filtering, and to some
slight extent, propagation do affect the audio qualities of
a signal. More than likely, the only difference between
your 'plain-old-wire' antenna, and a 'real-live' HF antenna
is going to be the strength of the signal your listening to.
Depending on propagation, distance to the signal source, and
some other variables, the 'plain-old-wire' may out-do the
other antenna!
I think the difference your hearing is just the difference
between receivers.

3955. Re: Noise on a switching power supply

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-11 00:00:00 UTC
From: W5LZ <w5lz@oio.net>
Message-ID: <391B3625.8177EBAF@oio.net>
Source record: 111387

(Things to try)
Jack,
Switching power supplies, UNLESS designed for communications
applications, are notorious noise generators. Thats because of
'how' they go about producing the required voltage/current.
Sort of like a 'square wave' generator. Aside from re-designing
the circuit (almost), your only recourse is to try filtering
the output, and this ~may~ be all that you have to do. Try
adding a filter network, such as you find on conventional power
supplies. If that doesn't at least reduce the 'buzz', I think
I would try selling it at the next hamfest/fleamarket.
Switching power supplies can be very nice...small size, low
weight, etc. But they have to be designed with the application
in mind.

Your impression is wrong. Surprise!

They aren't stupid. Light planes against MiGs isn't "confrontation,"
it's target practice.

During the days of our actively patrolling the Air Defense Intercept
Zone (ADIZ), USAF, USN and RCAF fighters met up with a couple of hundred
"airspace incursions" each year, many with ARMED aircraft. No
shootdowns. Over a 40-year period.

Funny how the only people who shoot down unarmed, non-aggressive
aircraft are the same ones who imprison their own people.

3959. Re: Second Story Grounding??

Newsgroup: rec.radio.amateur.misc

Ken,
First of all, forget the coax ground with the capacitors, they do absolutely no good. This idea originated from a 'letter' to one of the ham magazines 20 or 30 years ago. It does not work.
Second floor grounding is almost impossible to do. The length of the ground wire/strap is the problem. What would be a low impedance length to ground on one band, is almost sure to be a high impedance on another. Multiple ground wires/straps are just 'asking' for a ground loop problem. I haven't used one so can't say from personal experience, but the 'artificial' ground method ~might~ be your best bet.
About your power supply... You didn't say what the current requirement was for your amplifier. If the amp's current draw is very high (>20 A), your 35A astron just isn't 'enough' power supply! Depending on current requirements, you may have to double that, something like 60-70 amps. So, the problem with the grounding may not be the problem there.
Good luck, and if you get things 'fixed' let me know how you did it!
'Doc

PS - Do you go 'fishing' by dropping one end of an antenna in the river??

Keith,

If the "Brothers" weren't trying to generate a confrontation, then what were they doing violating Cuban airspace? Can you imagine what would happen if a couple of Cuban planes decided to drop leaflets over Miami...? I own a private airplane, and I am very aware of the fact that I could legally be shot down if I chose to fly into one of the prohibited areas in this country (such as P-66). While I agree with you that it's better to show restraint, you can't blame a soverign country for defending its borders. I'm also aware of the lengths that people will go to thumb their nose at authority that they don't agree with. There is a fellow up here in Albany, NY who owns a semi-famous

Beechcraft Bonanza called "10-Romeo" that he used to fly a "medical mercy mission" to Havana against the wishes of the State Department. He almost lost the aircraft (it was temporarily confiscated) (and his freedom) for this when he returned to our area. He had apparently declared a questionable "emergency" when over Havana on a corridor to Jamaica, and unloaded his supplies when he was at the airport there. He was ordered by the US State Department (and the Customs Service) to fly immediately to Miami to face their inquiry, but he chose to return to Albany via the Bahamas instead. He said that he feared for his life as a result of the anti-Cuban attitudes prevalent in the Miami area. He also considered that there was a high probability of his being framed if he passed through Customs in that area on his way back.

The Miami Cuban expat community has a reputation for extreme views, and it hasn't been improved by recent events...

They didn't. The Cuban MiG sorties launched while the nearest of the
three Hermanos planes were more than 50 nautical miles outside of Cuban
territorial airspace. The Cessnas which were shot down never penetrated
Cuban airspace, according to US radar plots. In fact, the only one of

the three which DID penetrate was the one which wasn't shot down -- and the incursion took place after the MiGs had begun their run on the first of the two planes which they downed -- a plane which was NINE MILES OUTSIDE CUBAN AIRSPACE AND HEADING AWAY. The second plane, shot down moments later, was even farther from Cuban territory when it was destroyed.

The civilized nations of this world don't shoot down unarmed airplanes for the heinous crime of crossing into their airspace. Much less for being ten miles outside that airspace.

In fact, there is no international aviation law whatsoever prohibiting nonbelligerent entry of a nation's airspace -- it's LANDING that gets you in trouble.

However, there is a chronology at http://www.hermanos.org/feb24/chrono.html which you might find of interest.

The ICAO report, including comm transcripts, is at http://www.hermanos.org/feb24/icao.html

I appreciate the references, and I'll look at them carefully. I know that one of the planes had an APRS system onboard, and a friend of mine had a track series on the flight. There is international law on the point of unauthorized airspace incursion - even if you penetrate the US Air Defense Identification Zone (ADIZ) from either ocean without an IFR or DVFR flight plan, or if you are outside your declared window of penetration (in time or location) you are subject to interception. If you do not follow the radio or visual instructions of the interceptors, you are subject to shoot-down. They usually preface this with a cannon tracer-burst to get your attention, but this isn't strictly necessary. This is all in the FAR/AIM literature. Other countries are free to use their own rules, but they often parallel these fairly closely.

The establishment of the boundary of "space" as 53 miles (in the 50's) was part of the agreement that created nationally protected airspace as part of international law.

Clinton ally leads march

Tony Blankley

The late, brilliant professor of semantics (and U.S. senator) S.I. Hayakawa wrote almost half a century ago that the act of communication is the basic moral act: "One begins with the sharing of perceptions about commonplace or even obvious things, so that, with the establishment of myriads of little agreements, larger and larger agreements become possible." That would be a pretty good mission statement for a news organization.
But, regretfully, not all news organizations report the details accurately, thereby justifying the confidence of their readers or viewers — which brings me to the anti-gun "Million Mom March" (a Mother's Day march on Washington which will call for registration of all handguns and other sundry gun-control measures.)
CNN's coverage is typical. Earlier this week CNN reported that "the march is the brainchild of a New Jersey mother, Donna Dees-Thomases, who conceived of the idea as she watched footage of a shooting at an area day camp." In a script that goes on for more than four single-spaced pages, that is all we learn of Ms. Dees-Thomases.
But that is just television — what about the printed word? In a major, front-of-the-section Sunday piece, the New York Times headlined its story: "Invoking the Moral Authority of Moms." Befitting the greatest news organization in the universe, the Times gives us more information. It quotes Ms. Dees-Thomases explaining: "Our maternal instincts were just kicking in . . . Everyone truly believes that until we get the politics out of this, nothing much will get done . . . This is a public health issue . . . This is personal, not political . . . We are in this for one reason alone: to keep our kids safe."
The New York Times, whose motto is "all the news that's fit to print," does manage to squeeze into this almost 2000-word report the background fact that Ms. Dees-Thomases is "currently on leave from her job as a part-time publicist for CBS." So, apparently, she is not just any New Jersey mother, but a part-time CBS publicist. But even the vaunted New York Times couldn't fit in all the news about Ms. Dees-Thomases. Before she was a part-time publicist, she was Dan Rather himself's publicist — and by reputation an exceptionally able public relations executive.
Oh, there is one other interesting fact about her. If the last half of her hyphenated name rings a bell, it's no accident. She just happens to be the sister-in-law of Susan Thomases, who just happens to be Hillary Clinton's best friend and closest political adviser. Just a New Jersey housewife, indeed. One might as well identify Queen Elizabeth as "Liz Windsor, an English mother of four."
Now, maybe all those warmhearted thoughts about maternal instincts, the kids and getting politics out of it, are genuine. But when the organizer of

this event — so timely and politically useful to the Clintons — turns out to be so closely connected to the Clintons, shouldn't that be reported widely? During the New York Republican primary, when some anti-McCain environmental ads ran on New York television, the major media formed a posse to find out who placed the adds. When it turned out to be a businessman closely connected to George W. Bush, that became the main story. For days the media itemized every available detail about the Bush connection — as well they should have. The public has a right to judge the motives of political players by knowing their background and affiliations.

The absence of such information in the New York Times piece is particularly galling, because it is an otherwise fascinating account of the role of mothers in reform crusades. I have a personal interest in that topic because for many years my mother, now retired, was an organizer for the Mother's March of Dimes, which fought polio and birth defects. Now those were public health issues bereft of politics. So it upsets me when political operatives cover their activities under the saintly mantle of motherhood.

Yet, in the lead of that New York Times article Ms. Dees-Thomases' motives are characterized as "trying to break through ideology and partisanship and make an appeal based on the moral authority of women as mothers." Thus it is penetratingly probative of the story's thesis (and of Ms. Dees-Thomases' credibility), whether Ms. Dees-Thomases is acting "as a mother" or as a political operative. To deny the readers such necessary (and available) information is to breach what professor Hayakawa called the moral act of communication.

Anti-Gun March Rejects Firearm Safety
Organizers of Sunday's anti-gun march on Washington DC have rejected NRA's firearm safety initiatives and made clear that restricting the rights of law-abiding citizens is their number one priority.
In a press release issued this week, the march's top booster said NRA, "should endorse what we stand for, specifically the licensing of handgun owners and the registration of handguns." The release went on to emphasize that, "the main goal of this March is licensing and registration."

Had the Jews of Europe NOT been disarmed, would 6 million of them
still have been slaughtered? Or, was this simply the price they had to
pay for "reasonable" and "better control of weapons"?

"There will be NO CONFISCATION of anything. It cannot happen in this
democracy". SAYS WHO? CLINTON, FEINSTINE, SCHUMMER? OR maybe the fine
fellow down the road from you that has that lovely bridge to sell?

Throughout history, it has been the nature of governments to
accumulate as much power as the people will tolerate. Beyond that
point there is tyranny. Tyranny is little concerned with people
quoting laws and the constitution. Tyranny is much more concerned when
the Constitution holds an honored place in your gun cabinet.

Charlie, your spin and interpretation of that gentlemans post could almost put you in the same class as James "the snake" Carvell.
The problem isn't the country or what made it great the problem is that people like you want to change it. I'm all for immigrants coming here, learn the language, etc., but they don't need to come over here because it is America and then try to change it.
You want the majority to pay the price for a minority. CONTROL and restrict the freedom of the law abiding because of the deeds of the criminal.
It makes no sense. Charlie, how about you having to ask for permission to speak because of something David Duke said?

You are naive as hell.
Think that the doper son of the neighbor, who has done time for selling coke to an undercover officer, is going to either register his gun - or be deterred from buying one by registration schemes? Last I heard, the guy - who as a convicted felon cannot legally possess guns now - had a pistol he'd filed the serial number off of, also a felony.

>Guns, in the hands of WRONG PEOPLE, >will
>destroy us.

Who are the "wrong people," Doc?
Federal statistics report that blacks commit homicide at EIGHT times the rate of European-Americans.
Doesn't that suggest to you that this country's violence problem is hardly due to an inanimate steel object equally available to all in a town?

Ever actually buy a gun, Doc - particularly since the Brady Bill?
It's not like buying Campbell's Soup at Harris-Teeter, or even buying a car.
To legally buy any gun at any gun shop, you have to undergo a
background check - through a national database. And here in North Carolina,
buying a handgun means about a three-day wait for the sheriff's department to
do a background check.
It's a whole lot easier for a habitual DUI offender like one neighbor's son
to buy another car - even on credit - than it is for him to buy a shotgun, much
less a pistol.

"Million" Mom March is a lie.
Its organizer, Donna Dees-Thomases, this week claimed 600 buses were coming.
Can you fit a million people on 600 buses?
Realistically, expect no more than 30,000 - with almost all from New Jersey
(see the "Million" Mom March's own web site) and D.C. suburbs.

Since you're posing your question to the DX newsgroup, you're probably trolling; I'll bite the bait:

We're communicators, first and foremost. As communicators, we're not content to limit the number of people we can talk to, nor do we attempt to limit the distance our signal carries. On the contrary, we strive to build as efficient a station as possible so as to get every possible milliwatt into the ionosphere. One measure of the efficiency of our station is being able to consistently "work" hams in far-off countries; no different from a golfer striving to drive the ball as far and accurately as possible.

Just as the stamp collector collects stamps and the coin collector collects coins, we collect QSL cards. A rare card might not have the monetary value of a rare stamp or coin, but nevertheless, it represents personal value to the recipient. Also, just as the golfer's score card provides proof of his distance and accuracy, so too the QSL card provides proof that an amateur did in fact carry on a two-way contact with the distant station in some far off land.

Walter, do you routinely troll the golf, coin, and stamp NGs, making fun of their pastimes? If not, then why troll the DX NG with your silly questions?

Hi there !

Can instalation of regular wire in antenna input destroy
the receiver ?
Just for RX -ing ?
I installed it in FT 847. the SSB signal is demodulated and it sounds
totally different
than the same signal on my shortwave ssb receiver. Noise level is quite
hight as well.
Or is it just, that such radio requires real HF antenna ?

Thanx for your answer in advance.

Prior to her current position, General Reno was chief of the Dade County Attorney's office. Her staff feared her emotional tirades.

When I received the telephone call described in an above post (this thread, I kept asking: "Are you sure this is Janet Reno? This can't be Janet Reno!" It was so uncharacteristic of what you'd expect from the Dade County Attorney, I was incredulous.

That's when a number of people told me, I wasn't the only one. With the passage of time, She may have grown out of it.

"Oh no, Mr. Government...you can't put any restrictions whatsoever on my guns. I am a law abiding citizen who knows how to handle them. Your laws are for someone else, not me. I'm above reproach." This is the selfish attitude of Cowboy Volz out there in the Nevadie desert. It's like saying to state officials, "I should drive 55 miles an hour? That's all? Why me-I've never been in an accident. Leave ME alone-go pick on someone else." Or telling an insurance company, "I must pay these rates? Why me? I have a great driving record. Send someone else the premium, not me. I'm above reproach." It's the "me,me,me and to hell with the rest of you" theory that's counterproductive. It's putting your own special narrow minded ideas before the welfare of this nation which creates problem. Undoubtedly the majority of gun collectors in this nation exceed the screwballs but does that mean screwballs who either have them or have access to them should not be scrutinized? Jeez, how selfish can a person get? What is so different about that attitude and the guy who's covered medically, pharamceutically and dentally at work who says, "To hell with the other guy. Let him go bankrupt because of lack of coverage. Let him decide whether to take a pill or eat? What about a veteran who justly derives BENEFITS? We have a clearcut case of the government intervening on behalf of the citizen but how many of the vets yell, "That's socialism?" Hell, comprehensive health insurance will be socialistic and that's just like communistic, so say the clods on 3.950." Yet, do any of them refuse coverage now? I say it's time for an infant like KK7HO to grow up and put his nation before himself and to understand that every citizen in this country is potentially a target thanks to the uncontrolled proliferation of guns imposed on us by Herren Heston and LaPierre. It's time for you thinkers who mimick Volz to understand the difference between regulation and confiscation instead of lumping them together in one basket. It's time you took an INTELLIGENT look at government instead of shrugging off every attempt to make America safer. I once asked Graham Dyer, VA3GJB, who is very PRO GUN, if Canadians are allowed to have them. I never got a reply therefore I think the answer is NO. If that's the case I never read a post by a Canadian ham tearing apart his government as I do by "loyal" Yankees. Maybe it's that Canadians are more mature than we or maybe it's because we have too much freedom and are abusing the hell out of it? Maybe it's because we take our liberty for granted and our rights too and are so in love with ourselves that we accept a myopic view of society as normal. Kennedy was right when he said, "Ask not what this country can do for you but rather what you can do for your country." Those words stated on Jan.20,1961 will always ring true and if the vast number of gun owners can still advocate no controls after witnessing the murder and mayhem over the past few years, then they have no concept of making America right and safe for everyone. This is not the lawless west of the 1800s but a complicated society whose needs must be met and one of them is to safeguard the health and welfare of every citizen and every LEGAL immigrant. We have a right to

be free of the horrible spectre of an NRA which imposes its stink on all of us. We demand a powerful organization like it to work WITH the government instead of against it. We demand that they acknowledge safety not profits come first and once that's accepted, then the overwhelming number of responsible gun owners won't have to pay the price of scorn thanks to the sanctioned lunacy of the irresponsible.

I beg to differ with you Doc but they can be confiscated and if the
government needs to do it they will. What will stop them? There
are too many laws on the books now, some really silly and need to be
looked at and not just add new laws to the books.

Also what really needs to be done is to use the laws to put the
criminals in jail, not the guns. I have yet to see a gun kill
someone on their own, seems there was always a person pulling the
trigger. I have been in law enforcement for a long time and have
yet to see a gun kill someone that wasn't attached to a persons
hand.

Also all the laws in the world will not keep the guns out of the
hands of the criminal. They have easy access now and will always.
As a law enforcement officer we cannot protect all the people all
the time and sometimes you need to be able to protect yourself. If
the criminals have guns your broom will do nothing to stop him.
Also doing what he says and giving him all you got does not guaranty
that you will not be shot or killed. Will you hide in your house
with the doors locked all your life and only go out during the day
and stay away from areas that you deem dangerious? Sounds like you
would be the one in prison, not the criminal.

Try again but do keep your liberial bull shit to yourself. This
does not belong here in rec.radio.amateur.misc

Jeffrey, don't presume to lecture your elders.

I have several QSL's from KP6, so talking to Palmyra on my radio
another time is way down on my list of things that I gotta get done.

In that regard most of humanity has the same priority regarding
Palmyra, even if the FCC has changed the prefix.

And thats the way it is!

Oh, we had lots of people around all the time. Most of them were
standing over the poor sap at the mic or key TALKING like hams do so
the guy had to have on earphones to hear the contacts. Of course,
this made the poor logger have to constantly tell them to shut up,
pissing everyone off in the process. We, the next year, setup the
station in a small camper that was TOO small for the yapping audience
to stand up in (no seats for spectators). Scores shot up without the
interruptions. Anyone wanting to watch the action stood OUTSIDE
looking in through the WINDOWS that kept the noise out of the
operator/loggers' ears.....

We made great scores the year I put a trap vertical sticking up out of
the surface of a little lake in a public park. We, carefully, laid
out an underwater counterpoise on the lake bottom. The antenna was 6"
of the water, and the water was a little brackish. I suppose the
counterpoise is still there if anyone wanted to use it. The wire was
insulated, so only the ends would be eaten away.... The photographer
from the daily paper took my picture assembling the AV-7 and it was
published to promote ham radio with the caption "On the Beam". Made a
much better display than those simple text notifications that usually
get published for Field Day....

Good luck on your scores! I just wish it wasn't so DAMNED HOT in the
South during the event. It's usually 95F by the time FD rolls around
and it makes FD really miserable down here!

4010. Noise on a switching power supply

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-11 00:00:00 UTC
From: jder8745@aol.com
Message-ID: <20000511095510.15501.00001917@ng-fm1.aol.com>
Source record: 111471

Howdy,

I picked up a switching PS at a hamfest flea market. It's about the size of a Cracker Jack box and is rated 15-V@7-A.

There is a pot which adjusts the output voltage between about 13 V and over 15 V.

I use this on my Yaesu FT-530 in the early morning in the living room with a rubber duck or telescoping whip.

There is noise on the output signal and discernable noise and desensing on the received signal for weak signals. When I disconnect the PS from the rig and hold the power wire near the rig, there is noise in the receiver.

I would appreciate some tips on how to fix this. Please categorize your hints as to :

1. Things to try. or

2. Methods that you have used and that work. :-)

tnx es 73 de Jack, K9CUN

4015. AF2Y-JUST FOR YOU..AUSIE GUN CONTROL

Australia's Disasterous
Gun Confiscation Program
GUNSSAVELIFE.COM

Let's all move to Australia -- Where only the criminals have guns!

AUSTRALIAN Gun Confiscation:
The Results Are In

The following is a synopsis of an interview conducted by Ginny Simone with Keith Tidswell of Australia's Sporting Shooters Association. The entire interview is available as "Surprise, Surprise" in the "Archive News" section of http://www.nralive.com/

One year after gun-owners were forced to surrender 640,381 personal firearms to be destroyed, including semi-automatic .22 rifles and shotguns, a program costing the government over 500 million dollars, the results are in...

Gun control advocates said before the the law was passed: "Just wait... we'll be safer... you'll see..."

The facts point to a different conclusion. A dramatic increase in criminal activity has been experienced.

OBSERVABLE FACT, AFTER 12 MONTHS OF DATA:

* Australia-wide, homicides are up 3.2%

* Australia-wide, assaults are up 8.6%

* Australia-wide, armed-robberies are up 44% (yes, FORTY-FOUR PERCENT)

* In the state of Victoria, homicides-with-firearms are up 300%

* Figures over the previous 25 years show a steady decrease in homicides-with-firearms (changed dramatically in the past 12 months)

* Figures over the previous 25 years show a steady decrease in armed-robbery-with-firearms (changed dramatically in the past 12 months)

* There has been a dramatic increase in breakins-and-assaults-of-the-elderly

* At the time of the ban, the Prime Minister said "self-defense is not a reason for owning a firearm."

* From 1910 to present, homicides in Australia had averaged about
1.8-per-100,000 or lower, a safe society by any standard.

* Australian politicians are on the spot and at a loss to explain
how no improvement in "safety" has been observed after such monumental
effort and expense was successfully expended in "ridding society of
guns". Their response has been to "wait longer".

Last updated: April 20, 1999

Now can we all stop this stupid debate. If this is not proof enough
that gun control simply will not work, I don't know what it will take.

>of Cowboy Volz out there in the Nevadie >desert. It's like saying to state
>officials, "I should drive 55 miles an hour? >That's all? Why me-I've never
>been in an accident. Leave ME alone-go >pick on someone else."

Ever notice that the Washington-imposed 55-mph national speed limit ended in near-universal civil disobedience - and fast?
Enacting into nationwide laws lacking any broad nationwide consensus ends fast in civil disobedience. Just like Prohibition.
You may find it hard to believe in the 2-call area - but this country is bitterly regionally divided on all social issues, guns included. A few weeks ago, an antigun group (Violence Policy Center) released poll results showing heavy support for banning handguns - in the Northeast, but nowhere else (not even California).

>What is so different about
>that attitude and the guy who's covered >medically, pharamceutically and
>dentally at work who says, "To hell with >the other guy. Let him go bankrupt
>because of lack of coverage. Let him >decide whether to take a pill or eat?

Do you want to live in a Peking-like nation where everyone is forced to do calisthenics every morning at work by a "nanny state" in the interests of reducing health costs, too?

>KK7HO to grow up and put his nation >before himself and to understand that
>every citizen in this country is potentially >a target thanks to the
>uncontrolled proliferation of guns imposed >on us by Herren Heston and
>LaPierre.

Bull.
Every Canadian is "potentially" a target too, despite draconian gun laws there - as was proven when both schoolkids in a feud this spring shot each other in a Toronto high school.

>Kennedy was right when he said, "Ask >not what this country can do
>for you but rather what you can do for your >country."

Your hero: got 58,000 Americans killed in a war in Vietnam, abandoned the Cuban exiles after sending them on a covert operation (Bay of Pigs), and rampantly cheated on his wife.

>We have a right to
>be free of the horrible spectre of an NRA >which imposes its stink on all of

>us. We demand a powerful organization >like it to work WITH the government
>instead of against it.

How can you trust "the government" after its leader lied twice under oath
and told the American people on TV: I did not have a sexual relationship
with that woman?
How can you trust "the government" after: Tuskeegee syphilis experiments,
concentration camps for Japanese-descent Americans, FBI supervisor Larry Potts
now doing 10 years for coverup at Ruby Ridge?

>We demand that they acknowledge safety >not profits
>come first and once that's accepted, then >the overwhelming number of
>responsible gun owners won't have to pay >the price of scorn thanks to the
>sanctioned lunacy of the irresponsible.

Let me make a suggestion.
The U.S. is bitterly split regionally on all social issues - as first came
to the fore during the impeachment debate, when Clinton's friends openly hoped
to use the New York congressional delegation as a "veto" against the heartland.
You will never get your cherished liberal social agenda nationwide
except by becoming your own country; you just lack the votes in Congress. It's
not Republican vs. Democrat - but regional. That's why you lost impeachment -
and why even the ultraliberal Washington Post said last year that you lost the
House gun vote.
Partition off as your own liberal nation in the northeast and upper Midwest.
Otherwise, the vast socially-conservative zone - the South, non-urban Midwest,
Mountain States, and non-coastal Midwest - has more than enough votes in
Congress to keep you from ever having your agenda nationwide.

>If that's the
>case I never read a post by a Canadian >ham tearing apart his government as I
>do by "loyal" Yankees.

Maybe that's because Canada's premier didn't get caught by an O.J.-style DNA
test perjuring himself in two separate proceedings. Maybe that's because
Canada's premier didn't go on television and lie to Canadians: I did not
have a sexual relationship with that woman.

4018. Second Story Grounding??

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-11 00:00:00 UTC
From: W5KAP <w5kapNOw5SPAM@qsl.net.invalid>
Message-ID: <08ec7284.090b6ec0@usw-ex0105-035.remarq.com>
Source record: 111479

Folks, I have what I guess is a pretty common problem. My shack is on the second floor of my home. Since I live on a river I had to build up on Pier and beam. I have a Rhon HBX32 up right next to the room where my chak is located. The eaves of the second story are at 20 feet and my tri-bander is up around 40 feet. In addtion to the tri-bander I have a 17 meter dipole just at the roof. I know I need a current balun on the dipole to keep the feed line from radiating. My question (finally) is how do I keep RF out of my shack? I tried a small solid state amp and when my TS-440S/AT keyed it, it would fold back the amp in a mtter of seconds and the 440 followed quickly. No damage but no power either. Now I guess it is possible that the power supply was crashing (they were on am Astron 35M). I saw where some folks are using a piece of coax to the grounding lug and a couple .01uf disk capacitors to run to ground. Is an MFJ Artificial Ground an answer or does my cable idea have any merit.

Thanks in advance.

News Flash: New technologies will solve ham radio problems for everyone like it or not. FCC Licensing to use a consumer product like a ham radio is stupid, counter productive stifles innovation and keeps prices for gear artificially high. These FCC rules and regulations are ALL showing their age and the world is changing way too fast for antiquated systems.

Personally, I use a real neat device called a cellular phone for most things no license, no testing required I figured out how to use it all by my self. :)

4026. On Telling Basulto's Baptism By Fire att: Curt

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-12 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <13162-391C9C7D-10@storefull-247.iap.bryant.webtv.net>
Source record: 111287

I told the story as I perceived. Having experienced my own causes, I know how involved movers and shakers become. All the more so when life and death are at stake.

Approaching Basulto with the opposite opinion and throwing hardballs, I was moved by story. Hence, the moving tone of the piece.

I am saddened that a professor cannot accept the empathy expressed. Instead, you question like a lawyer doing cross examination.

I can easily understand that, upon seeing Cuban MIGs closing fast, Basulto chose to present himself as a decoy by intruding on Cuban airspace.

I can also understand that, knowing his planes were under attack and seeing Havana below, he would think of that tiny stack of leaflets as a kind of retaliation. After all, he was ready to die.

The next large leaflet drop was timed with the winds. Brothers to the Rescue used scientists to assist them in picking up the winds into Cuba.

Curt, I am not the final arbiter, just an observer sharing his observations. It is sad that you have difficulty accepting my good intentions on their face, because I have no hidden agendas.

Bob Sherin, W4ASX

Yea... sure... if there is an HF amateur allocation to communicate on!
Go back to the history you keep quoting---amateurs had to bust ass just
to get what they have---and we keep on loosing bandspace. Overseas gets
new VLF allocations while here in the States a gazillion members of
industry first have to decide if they need it or not before hams can
have access. The government auctioned off our national resources when
they opened up the the VHF/UHF portions of the spectrum to the highest
bidder (like maybe they will do with our national parks---if they
haven't done it already). Who will fear a double digit thousands of ham
bullshitters when megabucks want specturm for bizzzzznessssssss...

Keith,

I did read the material on both of the URLs that were cited. As I am not certain of their origin, I can't take them as fact any more than the news accounts may be accepted as clear fact. There are too many agendas at work here. I'm just annoyed by the private attempts to bypass foreign policy decisions that have to be made and administered in Washington, D.C. Attempts have been made at the diplomatic level to remove some of the old Cold War baggage, but these efforts have met with great opposition from the same group that wants to bludgeon the country with that poor kid Elian. It's not that I'm unsympathetic to the plight of Cuban citizens - on the contrary - I believe that their lives would be improved by normalizing relations with the U.S. I don't think that well-intentioned but ineffective direct actions such as those undertaken by BTTR are really beneficial to anyone in the end. They are certainly not worth the attendant loss of life.

For the record, I'm quite aware of the physics of wind drift, but I'm trying to make the point that even the presence of propaganda leaflets

on those planes illustrates the provocative nature of their "mission". What was that supposed to accomplish? To tell the Cubans that they are living under a dictatorship? Don't they already know that?

Extremism is always diluted by contact with enlightened cultures. Why not let it happen naturally?

Curt Breneman

I know most of this post was meant for sarcasm, as far as the CB flock
to ham radio goes, but here's a good point. The procode crowd is trying
to have it's cake and eat it too, further showing the illogic of thier
position. They are trying to claim, both at once, that the 11 meter
crowd will jam up the bands by suddenly flooding to it. Then they try to
tell you that the restructuring will cause a tremendous drop in ham
radio spectrum usage and liscencing. which is it? both can't coexist.
It's a rhetorical question, my point being that they try to state
self-denying facts and hope that the anti CW test crowd buys it.

Gordon could be wrong...but he states that "a score of 37 or more correctly-answered questions (74%) will earn you a passing grade..." That does seem to indicate he knows what he's saying. My local VEs agree with that as well. I suspect it is 37 because 38 would be 76%, essentially raising the bar. Therefore 74% was settled on instead. Sensible in a "institutional" fashion. :)

What you fail to realize is, inteligents and technical prowess
do not exclude abusers and criminals. Sure, crime is not
inteligent. Yet there are a lot a inteligent criminals out
there. Like the ones who disrupt the repeater clubs. You'll
never see them on "worlds dummest criminals". Stupidity isn't
the problem. Lack of character is.

So, a hard test isn't the answer. What we now have are a lot of
inteligent asses.

What is the answer. Enforcement, policing our own bands *with*
FCC support, Inovation and change so to attract quality people.
What do you think?

If you're a Hamvention vendor who plans on selling QRP equipment please
contact me at KI8IK@arrl.net. I'm compiling a list of QRP vendors for
subscribers of the QRP-L reflector. This will help them easily locate
you among the thousands of sellers in attendance.

Items of interest include:

Used QRP gear.
CW keys and keyers.
Portable HF antennas.
QRP books.
Gell cells/chargers/solar cells.
Workbench supplies/soldering stations.
Parts for homebrew (transistors, var caps, PCB stock)
Crystals near QRP frequencies.

Please pass along:
1. Call or Business name.
2. Hamvention space #.
3. Description of items.

73,
Mike

Yep. This is not the same as a prohibition on penetration, and that
phrase you used "follow the instructions" is key.

In the Hermanos killings, as well as KAL 007, the slavemasters made no
attempt to give instructions. They located the target, made aquisition,
and released weapons.

They were confident that their apologists in the civilized nations would
make all their excuses, confuse the issue, and marginalize it.

Kim showed me the light!

I've changed my mind regarding restructuring and I can't believe I've been wrong about it all this time.
Why would a any sensible CBer want to go to all the trouble of getting a ham license just to talk to other newly licensed CBer's on different bands? They wouldn't. So CBer's won't be flocking to amateur radio after all. Looks like the ARRL's amateur radio restructuring plan CBer money grab membership drive back-fired after all. HA!

Dear Rastus:

Make sure you change your soiled clothes BEFORE you run the
sweeper throughout the house, you'll make less work for yourself
that way.

Put your dentures IN, you'll be able to communicate without the
use of your normal spastic facial tics and slobbering babblings.

The vacuum hose of the sweeper is NOT for your sexual
gratification.

Clening the toilet bowl with your tongue is obviously your
personal preference, but we have a waiver for you to make your
mark indemnifying us of any medical consequences when you use
the Sno-bowl.

Perhaps, after saving your pay, you may be able to finally get
that G.E.D. and complete your high school education.

LOL!

The fact remains, however, that amateur radio DOES need new
people involved in the hobby, because otherwise, the internet
and other new developments will cause this great hobby to go the
way of the dinosaur. The newer technologies will become more
popular, and nobody will be interested anymore.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams should be 90% not 70%

Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Step 4: No-code license should be one year non-renewable.

Step 5: Remove negative influences by disbanding the ARRL.

wouff hong

No, your perspective is skewed by proximity.

Duhhh-bya's policies are close to those of LBJ in 1964. To me, this isn't "conservatism."

When you show me where -- as governor -- he called for the Rangers to turn over their records on the Branch Davidian debacle for impartial investigation, then maybe you will have something.

When you show me where -- as governor -- he called on your legislators to eliminate any of the state's gun laws, seizure laws, laws against freedom of expression, or those permitting ninja raids, then maybe you will have something.

When you show me where -- as governor -- he risked anything of his own to advance the cause of individual liberty, then, maybe you will have something.

THESE are things that a CONSERVATIVE would do. Except nowdays, these are considered "radical" -- even JFK would be too far right to be a Republican presidential candidate this year.

4059. Question: Innovation in Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-12 00:00:00 UTC
From: Kevin McQuiggin <mcquiggi@sfu.ca>
Message-ID: <391C479A.ED335B9A@sfu.ca>
Source record: 111358
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.antenna

Hi Folks:

I've been licenced for 23 years, currently VE7ZD, and am in graduate school up here near Vancouver, BC.

I'm researching amateur radio and its history. I'm specifically interested in inventions, discoveries, or techniques that were developed within amateur radio and later spread to the electronics industry. Similarly, some of our operating techniques and procedures were later widely adopted by other services.

Hams operate outside of the structured environments within industry, and I think that this freedom has permitted us to invent and discover without being shackled by any policy issues, or possible stigmatism from investigating things that would be considered "too far out in left field" by management and non-ham co-workers.

Examples would be the investigation of wavelengths below 200 meters, with the discovery by hams that such wavelengths were better for propagation than longer waves; packet radio; APRS; propagation studies that were undertaken in the 20s and 30s; facsimile; SSTV; and network operating techniques.

Some of this stuff was regulated, such as the banishment of amateur radio to the "useless" wavelengths < 200 M, but this sort of proves my point. There's been lots of innovation within the hobby, and the general public now benefits from it.

If anyone could provide me with more examples, or good books or articles on this topic, then that'd be great. Of course I'll give appropriate credit to those who assist!

If you could email me as well as posting your reply, thanks. There's lots of traffic in these groups and I don't want to miss any replies.

73,

Kevin VE7ZD

This is Paul Washa, W0TOK Mound, MN we are bringing
almost all our electronics books to Dayton. 3,000 pounds. We
have been loading the Surburban for three days with books we
have ordered over the last two weeks for this great event.
If you are there, stop by and visit. This is our third year
at outside vendor spaces: 2615, 2616, 2617 We have the very
latest ARRL, W5YI, and Gordon West license study guides, plus
the best selection of Amateur Radio related books you have
ever seen at VERY competitive prices. 73 Paul

>[stuff deleted]

Packet radio already existed. Somebody (I can't remember his position
or whether he was a ham) in what was then the Department
of Communications here in Canada, with a name like deMercado, had had
some experience with Aloha Net in Hawaii. He decided it was time
for hams to move forward, and so he changed the rules in Canada to
allow packet radio, and introduced the Digital License. That license
carried no code test, but what was said to be a more complicated
theory test, and was VHF only, maybe restricted to certain bands. I
thought there was also a segement or two set aside for packet that
only Digital License holders could use. I remember he came and talked
to one of the local clubs in 1977 or 78, so long ago that the details
are vague.

So it's debatable how much ham radio influenced packet radio. On
the other hand, I don't dismiss the value to some individuals, who
got it going in ham radio and played with it, and used that
experience in the commericial area.

I think the influence of ham radio on technology in recent years has diminished. That's less important than whether it is still affecting the young, getting them interested in electronics and radio at a young age and providing them with a place to play with these things.

But up till a certain point, ham radio was basically synonomous with electronics and or radio. You don't have to go any further than Howard Armstrong, who was a ham first and it could be said his work was nothing more than an extension of ham radio, even if it influenced radio tremendously; regeneration (and regenerative receivers) the superheterodyne receiver, the superregenerative receiver and practical FM. You can't do anything in radio without one or more of those things.

A lot of the oscillator circuits are named after people who happened to be hams.

I thought practical narrow band FM for two way communication came from a ham, something like the guy who started Sonar, but that is based on some remembrance.

Amateur satellites certainly must have helped the field. The first OSCAR went up only a few years after Sputnik and must have cost significantly less. The concept of a piggyback launch came from OSCAR, and certainly others have taken advantage of that. There have in recent years been "OSCAR-type" satellites, ie relativley simple and inexpensive, which have probably been mainly experimental but have either helped provide a training ground for satellite work or helped "third world countries" in some way.

And you can find examples of hams supplying practical experience (gained from the hobby) in some of the important projects of the last century. I can't get to it easily, but I read a book about Benchley Park during World War II where they worked on what the other side was doing, and the author mentions right at the end the importance of hams in the practical experience they brought to the process. I think there was a similar mention in a book about radar development during WWII. People would come out of the universites, and know all the theory, but be lost when it came to practical work, but hams had that down because of building their own equipment. And of course when WWII started up, hams ended up filling various technical roles in the armed services.

I thought the first person to play with radio astronomy was a ham. If it was't someone who followed up was.

The US Army tried moonbounce in the forties or fifties, but they needed big arrays and lots of power. Hams followed, using much simpler equipment. I'm not so certain moonbounce has much practical use for society other than hams, since others can put up satellites while hams are somewhat limited, but the process of advancing the art may be as important as whether the technology actually migrates elsewhere.

A lot of the history has been written. The ARRL had or has some books on the history, including that one about "200 meters and down...". "Empire of the Air" by Tom Lewis (and it was a Ken Burns PBS show some years back) dealt with Armstrong, Sarnoff and DeForest and probably is fairly available. There was a book about Armstrong, I can't find my copy right now, first published in the fifties and then in the sixties by Bantam Paperback, that I've found in used book stores that provides good, though not too technical, coverage of his life.

Since you can now get QST easily on CDROM, it would be worth getting the early years, actually get the whole set if you've got the money, and then you can see the history unfolding as it happened. The other ham magazines may not be as useful, since they came later, and more important they aren't as available so cheaply or conveniently.

Once you have the ham history, then you can start exploring where it fits into the rest of electronic/radio history. Whether it was simply implementing something discovered elsewhere, or had impact on society beyond ham radio.

And you might want to dig up an article by John W. Campbell (yes the legendary editor of Astounding/Analog SF magazine) who was a ham and once upon a time wrote some technical articles for CQ. He once wrote an article about "How to be an Amateur" pointing out some of the benefits hams have to innovate for the simple reason that they aren't bound by corporations. I think it was published in an early issue of 73, and then reprinted once or twice. 1971 comes to mind.

I love seeing Bill Clinton and Janet Reno attacked for Ruby Ridge.
Since it happened when GEORGE BUSH was president in 1992. Clinton
didn't take office until January of 1993. BTW, Randy Weaver doesn't
have a widow, he's still living. Randy's wife was killed at Ruby Ridge.

It's worth remembering that BATF has an arson-prevention leaflet saying that juvenile arson fires kill 600 Americans yearly.

>Laws waived at a criminal lack the impact >of a .44 special.

Having both prosecuted and defended criminals, it is my firm opinion as a lawyer that habitual criminals have no fear of laws whatsoever in this country, nor of judges, nor of probation officers. They so rarely even get prison time that they don't even fear it.
But the two things that burglars fear most - and admit in jail interviews to fearing - are dogs and guns. One will wake up the resident - and lead him straight to the intruder - even if the dog is just a yappy Chihuahua.

Want to guarantee the economic end of ham radio? Because if a hobby becomes
a chore, people will defect in large numbers to the Internet, etc. - and no
manufacturers will remain to provide either new gear nor a lobbying base.
The present licensing system anticipates that those licensed will know
enough to stay out of trouble in whatever "specialty" they gravitate to - like
the wife of a ham who just uses two meters to keep in touch with him.
We don't even require that kind of licensing for drivers or lawyers.

Bob,

I understand that you respect Basulto, but you damage your credibility with your worshipful tone. From your prose, it would appear that the only thing missing from this man is a crown of thorns! Don't you think that leaflet drops of propaganda are at least somewhat provocative? How was this done from international airspace? Was a strong wind blowing the leaflets ashore? I don't know the truth about exactly how the arial confrontation took place, but people have to realize that while we go to great lengths to protect protesters in this country, this is not a general phenomenon. If you taunt a rattlesnake, you're eventually going to get bitten. You can't then blame the animal for following its nature. Countries are a little like animals - they protect their territories and their interests with teeth and claws when sufficiently provoked. If you're going to subdue such an entity, you have to choose one of two ways - either by gentle coaxing and friendliness, or through overpowering aggression and conquest - any middle ground leads to failure and injury. The other option is to leave them alone! Cornered animals are the most dangerous. I think that as a civilized country, we cannot choose the aggression method. This leaves just two things - leaving them alone or trying to change their system through friendship, tourism and trade. There is no room in such a plan for those who are consumed by bitterness and want retribution at any cost. They should take the higher ground and they'll enjoy life a lot more.

>

LOL! How true...although, I must tell you, I"ve had Chihuahua's all my life, and a Chihuahua who is well adjusted and secure, only barks in defense of it's turf. In fact, the one I had previous to my current dog, was so laid back, that when someone entered my house uninvited, she didn't bark at all. She began a soft low growl, and kicked me until I woke up. And then once I got out of bed to investigate, crawled up under the covers and hid until the noise was over. She always had more sense than me.

My current dog, also a Chihuahua has barked maybe twice in the 10 years I've owned her.

But you are right about the fear of guns. The two times I was in the house when it was invaded, when I got behind the intruder, and clicked the safety off my Walther, the incident was over. Once the intruder soiled himself.

How did you pass your Private without learning about wind drift?

> Was a strong wind blowing the leaflets ashore?

Most likely. From 10,000 feet, it doesn't take much breeze to blow
paper 12 or 15 miles.

> I don't know the truth about exactly how the arial
> confrontation took place,

You haven't checked the URLs I gave you? The ICAO report is pretty
clear.

There was no "confrontation," the Cuban jets shot down two unarmed
Cessnas in international airspace.

Yes, it did, Vince. Instead of creating classes of license, with a maximum
12 wpm code test, as ARRL asked for, the FCC gave 3 classes of license, with
a 5 wpm code test.

It's already gone Cecil. Ham radio is literally dying.
Average age for hams is 68 Yrs old.
Your correct above, and ham radio WILL be DEAD
by 2015. Stick a fork in it - it's done cooked thru and thru.

RIP: Amateur Radio 1917-2015

Make $1000 of an initial $6 investment very easy, not a scam, really works!

Make Money Now! It doesn't get any easier than this. Just follow this awesome money making program, and you'll be collecting a nice supplemental income in no time. You don't have to buy anything! You don't have to sell anything! This is not a Paid To Surf Program or a Paid to Click Program. You don't have to surf the Internet for a ton of hours or click on little banners a million times. This program is fast, simple, easy, and most importantly....IT WORKS!

Mission: To make a one time investment of $6.00 and have it return to you over $6,000.00

The program really works! Read this testimonial first!
A little while back, I was browsing through newsgroups and websites, just like you are now, and came across an article similar to this. It said that you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a total scam." But like you and me, i was curious, so i kept reading. Anyways it said that you send $1.00 to each of the 6 names and addresses stated in the article. After you send the mail, you then place your own name and address in the the bottom of the mailing list and post the article in at least 200 newsgroups. No catch, that was it. So after thinking it over and talking to a few people about it, I figured, "what have I got to lose other than $6.00 and a few stamps?" So I decided to try it and I mailed out my measly 6 bucks. Well Guess What?! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. Mail after mail with a 1 dollar bill inside. In the first week, I made $25.00 - Wow, I already made back my initial investment with some extra lunch money. But next week came more mail. By the end of the second week, I had made over $100! In the third week, I had over $1200.00 and it was still growing. By the end of the 4th week, I had well over $6,000.00! I couldn't believe it. It was certainly worth $6.00 and 6 stamps. And the best thing - it's perfectly legal! Thanks a bunch to everyone involved!

Important: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!
Please note: Please follow the directions EXACTLY, and $6,000.00 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business

your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you asking to be included in that list.
4 Basic Steps to Success
STEP 1 : Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Write on each piece of paper your mailing address and your email address. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase with
your house and email address. What you are doing is creating a service. THIS IS ABSOLUTELY
LEGAL! You are requesting a legitimate service and you are paying for it! Any doubts? Please refer
to Title 18 Section 1302 & 1341 of the Postal lottery laws or call the US Postal office at 1-8000-725-2161.
STEP 2 : Mail the 6 envelopes to the following addresses:

1) Christopher L. Sloan
2200 Hickory St.
H.S.U. Box #14579
Abilene, TX 79698

2) Karen Lohning
155 Blue Spruce Ct.
Delaware, Ohio 43015

3) B. Stoltenberg
7149 Wynter Way
Indianapolis, IN 46250

4)J. Hanan
10871 Poyntell Cir.
San Diego, CA, 92131

5)Rob Barnes
14575 Spingvale st.
Poway, CA, 9206465t

6)Eric Larose
17757 Corazon Pl.
San Diego, CA, 92127

STEP 3 : Now copy this list and take the #1 name off the list that you see above and move the other names
up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as #6 on the list.
STEP 4 : Change anything you need to, but try to keep this article as

close to the original as possible. Now try to post your amended article to at least 200 newsgroups (chat rooms, message boards, guest books, bulletin boards...u know). You don't have to post 200, you can do more or less, but remember, THE MORE YOU POST, THE MORE CASH YOU MAKE! Keep a copy of these steps for yourself, and whenever you need cash, you can use it again, and again.

PLEASE REMEMBER : This program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Loook at it this way. If you are a person of integrity, the program will continue and the CASH that so many others have received will come your way.

NOTE : You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes peple send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft. So, as each post is downloaded or read, and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousand of dollars!! What an opportunity for only a one time investment of of $6.00 and six stamps. Send it now, add your own name to the list, post it, and you're in business!

To make sure you don't get into trouble with Uncle Sam, make sure you declare your extra income. Remember, this is LEGAL> You are using the Internet to advertise your business. What is that business? You are creating a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be addesd to your mailing list. It is legal. What you do with your list of names is up to you. so build your mailing list, keep good accounts, declare your income and pay your taxes. By doing this you prove your business intentions.

How Much Can I Really Make?

Out of 200 postings (which should take no more than 1 hour) you receive only 7 replies (a very low percentage). So then you just made $7.00 with your name at #6 on the letter. Now each of the 7 people make around 200 postings with your name at #5 and 7 more people respond, you just made $49.00. Now those 49 people put up another 200 posts each, and still only 7 more reply from each person, you just made $343.00 with your name at #4. Following the same pattern, you would make $2401.00 with your name at #3, $16,807.00 at #2, and $117,649.00 at #1. And remember, that's only if 7 people reply each time!

Additional NOTES :

1) In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office, explaining the above statements (that you have an online busines, etc.). You may have to pay an extra tax, but that's OK, the amount of the incoming CASH is HUGE!!

2) You may want to buy mailing and email lists for future CASH, or

database of spreadsheet software.
3) You may eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. Just make sure all the addresses are correct.
4) If you're really not sure or still think this can't be for real, please print a copy of this article and give it to someone who really needs the CASH, and see what happens.
5) For a business to be successful, be honest and fair.

4088. Re: AF2Y-JUST FOR YOU..AUSIE GUN CONTROL

Newsgroup: rec.radio.amateur.misc

It's an interesting and telling observation that AF2Y, Charles Schwartzbard, is the only one, out of all the posts and replies, that has taken the stance he has. Charlie seems to be the only one way out in LEFT field.

4089. Re: AF2Y on gun- loving schmucky hams.

>

.....

Here, I think, is the most common widespread misconception about immigration and what the United States was originally intended to be.

These immigrants aren't conciously trying to change America. Its not like they have some master plan to change the USA to fit their tastes. This happens because
Mexico is wherever Mexicans are, Africa is wherever Africans are, China is wherever Chinese are, etc. When any race becomes a majority in a particular geographic location, that area becomes, in fact, the same type of civilization, culture,
"country", that they came from!

The United States, its civilization and culture, was created by White Europeans FOR White Europeans. If Whites become a minority in America, you can kiss your "world" goodbye, and get reagy to live in what will be just like Africa, Mexico, or whatever.

THAT is why non-White immigration should be made a criminal offense in a White country.

4091. Radiosigs is "da man" ! ! ! !

Source record: 111412

Radiosigs a Leftie? I don't think so. He's the best agent provocateur on the internet. Look at the replies he stimulates. He's causing the right minded people to get off the fence and speak up.

I think Radiosigs will single-handedly turn out enough Republican voters to send The Amazing AlGore back to farming tobacco this November. Rush Limbaugh should learn from Radiosigs.

So far, Rush has "lost" 2 presidential elections for us. He just couldn't turn out the voters. Along comes Radiosigs. Suddenly, gun owners and tax payers are starting to speak up.

If this continues till November, Bush will beat The Amazing AlGore worse than Nixon beat McGovern in 1972. And we should see another Republican landslide in both houses of congress. Not to mention what will trickle down to state and local elections. With Radiosigs stirring the pot, the welfare parasites won't be able to elect a Democrat to Dawg-Catcher this time around.

Keep the pot stirred, Radiosigs. You're the best advocate the devil ever had. Well, aside from Komrade Klinton. But that's an apples-to-oranges comparison. Does not apply here.

Thanks. Yeah I know the principle of how they work but...FOUR DOLLARS!

My friend gave me a TDK 2-port noise filter and that helped quite a bit. I tried a 0.005-uF disk ceramic...no luck.

Then 270 uF...no luck. The equivalent output impedance of the supply is just very low.

Thanks for your interest. I read a lot of your posts, BTW.

I wouldn't go so far as to say that but it's certain that our goverment agencies have been catering. Let's see, every form, application, or request for aid are printed in how many languages now?
Take that along with the failure to control illegal immigration and, well you get an influx of non-Americans that don't plan on becoming one, are here to get the freebies (i.e., welfare, medical, etc.), and are not required to do anything (i.e.,learn the language, Constitution, get a job) other than register as democrats.

and replied:
>And apprently you have no compassion >for the elderly
>Americans who have to now decide >whether to take a pill or eat? That's
>because you're a narrow minded schmuck >who's probabaly a young rich
>snotnosed character without a care in the >world.

In your mind.
I was the only student daily taking a bus to the University of North Carolina Law School from 1982-85 because my father had just been unemployed (professor) for a year.
I also know what it is to be one of the only three kids from a middle-class family in a rich suburb (when I was in elementary school and sixth grade).

>You're parents aren't old
>either so why the hell should you care >about such an important problem?

Bullshit.
I just visited my 78-year-old mother in the nursing home today - where she's been since several strokes led to her ending up there late last year.
Before that, I was her one-person nursing home for two years as she had three major strokes and a ministroke.

4097. Reply to Mundyusa1: On General Reno

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-12 00:00:00 UTC
From: AllAmericn@webtv.net
Message-ID: <17490-391B9507-17@storefull-244.iap.bryant.webtv.net>
Source record: 111418

I agree with your statement, the very purpose of these posts.

Definitely honest, popular with the electorate, General Reno has always been the consummate politician. Her telephone call to me is indicative of her political instincts. She spent more time on politics than organization, where she was weak. Permit me to expand.

More than a decade ago, I returned to find my house burglarized. Every room was strewn with property in disarray, much was missing, and a few doors were smashed. Determined to catch the thief, I played a hunch and hit the jackpot. It was my next door neighbor, whom I caught red handed my goods. The police filed a report; the Dade County Attorney proceeded with the prosecution. An easy conviction, I assumed.

Called downtown at my own expense to assist the prosecutor, I gladly cooperated. However, after I was kept waiting all afternoon on two separate occasions, I came to feel penalized.
The prosecutor then botched the notice of hearing for the Defendant, failing also to notify me. The thief got off.

Having proceeded the law and order way, I wound up being threatened by the thief, who lived next door. The law's inept efforts emboldened him.

Livid, I called a Miami Herald Columnist with clout, who wrote my story beautifully. Enter a ranting Reno, as I picked up the telephone.
Sharing the tete-a-tete with insiders, they told me that Reno's tirades downtown were legendary, and her staff was dispirited. Small wonder my case was derailed.

The irony: The electorate loved her. Reno knew how to spotlight the roses and avoid the dandelions.

Source record: 111420

KW is correct when he writes that the airspace violation and leaflet drop coincided with the killing of two Brothers to the Rescue pilots and downing of their private plane.

It was the opening hardball I threw Basulto, when I chanced into him at Fudruckers, here in Miami, Florida. Like you Curt, I was convinced of his wrong-doing. Calmly, he recounted that day, as if he were reliving it.

Pursued by MIGs in international waters near Cuba, Basulto thought fast, knowing his three private planes were no match for the MIGs. He decided spontaneously to fly into Cuban airspace, as a decoy. It was a bold gamut to sacrifice himself for the safety of the others.

Gesturing to me by looking down at the restaurant floor, he said:: "I could see Havana below." Reaching beyond his food: "Then I grabbed a stack of leaflets and threw them out." (Later he described a second large leaflet drop from international waters.)

On that day when his pilots perished, Basulto survived. As he tells me the story, he is consumed with grief for the pilots he lost, one a Viet Nam vet. The Cuban pilots, who flew to the same spot twice that day, had orders to bring down their planes, he contends.

The Cuban government had good reason to know Brothers to the Rescue would be there. For years, all Brothers to the Rescue, flight plans had been furnished to them beforehand. On this particular day, the flight plan had been amended. U.S. radar spotted the Cuban planes on two separate occasions in accordance with those flight plans. Basulto is convinced the Cuban missions were premeditated.

With utter dismay, he says, the U.S. government knew the jets signalled impending doom yet remained mute, His voice still controlled, his face grimacing with pain, he emphasises that he is determined to bring the "murderer Castro" to justice.

Watching him, listening to him, you are impressed with his principles, the danger to which he subjects himself, and, at 59, his serene, conditioned appearance. This is not the media depiction of Busalta; it is the Real McCoy. You wonder how you could have bought the U.S. misinformation hook, line and sinker for so long?

Basulto's mission is the rescue of Cuban refugees drifting towards Florida in all modes and manner of rafts and wreckage. Sadly, many, like Elian's Mom, don't make it.

U.S. rules render refugees heroes: If they are caught at sea, they are repatriated, but if they scratch their way to shore, they can ask for asylum. For them, life, liberty and happiness lives--or dies.

Hey idiot, do you think you are the only one in this world with the
name of Mark Morgan! Did GOD reserve that name just for you? Are
you a General in the armed forces? Help me out on this one will ya
Mark.....

Well good for you Mark... I was just pointing out that your
statement about the 2 year license is not as ancient as the one year
non-renewable which I held in 1966, now that's ancient....

Well guys, you know what really chaps my butt about this immigration thing? The language deal. I have been to 13 different countries in my travels. And in each and everyone I learned enough of the local language to be able to communicate. But here in the great USA I lived in North Miami, where my kids were not able to keep up in public school because the teacher was using Spanish for Gods sake.

Then I hear about how the "cubano's" want to change all the road signs to Spanish. I left Florida.

My point is this; If one comes to a country to make it their home, then they must learn the language...ENGLISH...They must learn about the government, politics, etc. And they MUST APPLY FOR CITIZENSHIP. Or get the HELL OUT.

Dan/W4NTI

Blaming gun deaths on guns, is as illogical as blaming Arson deaths on matches.

All trigger fingers should be registered. Just as a gun will not work without a bullet, it will not work without a finger.

If guns are so evil, why are they so often used in the name of God.

Ask not how a gun may harm you, ask instead how it may save you.

Laws waived at a criminal lack the impact of a .44 special.

Sign on the window of a burglarized house. "Hollow point test center, test subjects needed".

Repeating firearms do wonders for repeating criminals.

Burglars hate light, especially muzzle flashes.

Doc, thanks for your words. I kinda figured the coax trip was too good to be true. I have a friend in the local area who swears it fixed his problems though. I have enough radiating feedline witht eh coax to the 17 meter dipole!! I guess I will watch e-bay and see if they have an MFJ Artificial Ground out there to bid on.

The question on the power supply was a good one. I negelected to mention that the amp needed around 20 amps. I knew it was gonna be close running the amp and the rig on the same power supply. I just don't know if the problem was cuased by RF coming in the shack or by the power supply breaking down. I have not suffered any RF "bites" so my guess is the PS couldn't take the load. I wish I had a tube amp around to play with and see if I can run some power. Of course I busted FW/G3... last night on 100 watts on the first call so maybe power is overrated (NOT!) I know A5 is not in the log yet but ya gotta hear em to work em.

No problem. A simple solution is NOT to pay any invoice one does not
order. A simple, retarded, ill-educated fuck such as yourself fails to
understand that. Keep up the childish "I'll subscribe you to many
magazines tantrum, it's really quite amusing, and you know, the FBI is
watching the source isp, oh well, you've been in prison before haven't
you?

4117. Help with MFJ-1278 and Kenwood TMV7

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-13 00:00:00 UTC
From: Pedro Braz <pqp@netcabo.pt>
Message-ID: <8fjfpujfu8@duke.telepac.pt>
Source record: 111188

Hello,

I have a MFJ-1278 and a Kenwood TM-V7 and need to connect them both.

The MFJ 1278 Pin out is as follows:

PIN 1 - MIC. AUDIO
PIN 2 - GND
PIN 3 - PTT
PIN 4 - REC. AUDIO
PIN 5 - SQUELCH INPUT

The TMV7 Pin out is as follows:

PIN 1 - Packet data input(PKD) (TX data from TNC to transceiver)
PIN 2 - GND for PKD
PIN 3 - Packet Standy - TNC can use this pin to inhibt the transceiver microphone input while txing packet signals
PIN 4 - OUput of detected 9600 bps date 500mVp-p 10Kohm
PIN 5 - Same but for 1200bps (500mVp-p 10Kohm)
PIN 6 - Squelch Control output (Inhibts TNC data txing while transceiver squelch is open, Prevents interference to voice comms over the same freq. Output leve: Open Squelch +5 V high Close Squelch 0V Low.

They say the 9600 pin should be used when there is only one PIN coming out of the TNC for the data.

The idea I have of connecting them is:

MFJ TMV7
PIN 1 ---- PIN 1
PIN 2 ---- PIN 2
PIN 3 ---- PIN 3
PIN 4 ---- PIN 4
PIN 5 ---- PIN 6

IS ot ok? Should I do it another way???

I really need help.

73's and thx all

Pedro Braz - CT1FQD

Makes as much sense as putting a short armed boxer in the ring
with George Forman. Reach, sometimes is the issue.

Defense of home, property and country, often takes place at a
range greater than 10 yards. As has been demonstrated time and again
throughout history.

The Second Amendment is NOT about sport, it is about defense, and
most specifically defense of the individual and the individual's
rights. From other individuals, and from the Government.

Do your homework. The Constitution was not written to empower the
government. It was written to limit the powers of the government
against the rights of the individual. The Second Amendment is the
insurance policy that protects that intent.

And for the record, the posters here who insist that the Second
Amendment is soley for the purpose of a well regulated
militia...You're exactly right. The Militia, in the language of the
period, was an armed populace. The people. Individuals. Citizens of
The Republic. And a Well Regulated Militia, in the language of the
period, was a Militia that was well equipped for defense of country,
that is to say, well armed.

A well regulated Militia, being necessary to the security of a
free state, the right of the people to keep and bear arms shall not
be infringed.

It means in clear language, that the right of every citizen to be armed and competent in the use of weapons shall not be restricted, limited, or controlled, so that the people, shall be able to protect the rights to remain free. That means individuals. That means individual responsibilities. And duties to citizenship.

As unpopular a stand as it is, it has been upheld by the most learned of Constitutional scholars, and numerous court decisions.

> Miami, Florida

Bob,

I would like to differ with you on a couple of points - first, I have no axe to grind since I'm not a great supporter of the current administration, and I am definitely not in favor of the Cuban political system or its leader(s). While it's true that some "ivory tower" thinking strays to the left of mainstream, I consider myself quite a bit more conservative than my colleagues on most issues. I don't feel a bit pressured by any governmental granting agencies to take up any political positions, or to avoid any for that matter. I'm speaking from the point of view of someone who has accumulated as many facts about this situation as possible, and then formed an opinion based on an evaluation of those facts. That's what we do in the science biz - We can't afford to take limited "world views" of anything, so I don't. Second, it seems naive of you to believe that the leaflet distribution came as a self-sacrificing afterthought. Don't you think it would be odd for them to be carrying leaflets if they didn't intend to drop them? I don't know the content of the leaflets, and I don't have data about the people who were saved by the BTTR organization. They may have done a lot of good in other areas, so I don't mean to pick on them specificially. My point is that it's not in the best interest of US international relations for private citizens to engage in their own private foreign policy actions, particularly if they undercut ongoing negotiations taking place at a higher level.

I condemn the shooting down of the Cessna 337's, and I think that the current Cuban regime has pathological tendencies. What we differ on is the best method to be used to improve this situation. I liken the current state of affairs to a hostage situation, where negotiation is

the best way to prevent loss of life. Emotional responses are certain to generate casualties when dealing with a government like that. If we were discussing relations between the US and Canada or some other modern, free country, I would say that a different set of procedures and expectations would be present. In the case of an isolated country with a totalitarian form of government, provocation is likely to lead to violence rather than a strongly worded protest. This being the case, doesn't it make more sense to bring about change through business and social interactions rather than through confrontation?

Anti-gun advocates are dishonestly suggesting that gun shows is a new, unforseen, and dangerious, phenomenon that has to be quickly regulated and controlled before the world ends.

Nonsense!! Gun shows have been going on for the entire 220 year history of this country. Indeed, gun shows were common long before this country came into existance. Government control over another aspect of individual rights is the new, unforseen, and dangerious, phenomenon.

> Gun owners-KEEP THEM, USE THEM PROPERLY,

Sorry, Keith, but I don't buy it. The internet has not made even a small dent in number of people watching television, renting videos, or listening to the radio. If it hasn't affected those "technologies," there is no reason to believe that it will have any more effect on ham radio.

Again, as I said before, it is not new technology that will harm ham radio - its the operators. The kind of operators we have will either make or break ham radio. Its as simple as that.

By the way, you said that the internet "is the most efficient communications medium available to the common man." Look, I'll agree the internet is interesting, but lets not go overboard here. The internet also has more negative aspects than any other medium known to man (privacy issues, questionable content, wrong information, misinformation, etc.).

Well, I guess I don't see the same ham radio that you see. In my ham world, there has never been a greater demand for ham operators by all kinds of groups wanting support for their communications system, or lack of communications system.

And I've seen plenty of interest. In fact, there is not a week that goes by that I don't have to take time to answer somebody's questions about ham radio.

In my area, the numbers of ham operators is growing. The license exam sessions are full. And the new license holders seem thrilled with this hobby.

I guess people see what they want to see. I see a bright future for ham radio, while you see its ultimate end. I guess only time will show who is right.

Now that is funny. By the way, I heard on the news that sponsors of
the "million moms" say that the numbers expected in Washington was
closer to 150,000 (instead of a million). I guess honesty is not a big
issue with this group either (gee, we're expecting 150,000, but we'll
call it a million mom march).

Of course, Clinton, in a radio address, is also supporting this group.
Of course, we already know where he stands on honesty.

Hi all;

Looking for both/either Drake MS-4 Speaker and Drake AC-4 power
supply.

Power supply must be operational, cosmetics not very important.

Speaker must have proper Drake decal on front, and not be dented.
Otherwise I'm flexible.

Please contact:

Neil, N1DMA
NeilR@innermedia.com

or call toll free: 800-962-2949

Thanks!!!

And you think that ham radio HAS?

> If it hasn't affected those "technologies,"
> there is no reason to believe that it will have any more effect on ham radio.

As I said, those are non-participatory. The net attracts those who are
interested in long distance communication for amusement. YOU, for
instance.

> By the way, you said that the internet "is the most efficient
> communications medium available to the common man." Look, I'll agree
> the internet is interesting, but lets not go overboard here.

Sure. Just as soon as you consider where this discussion is taking
place.

And all you have to do to prove me wrong is show me one other medium by which, say, an anonymous 9-year-old can communicate with thousands of others . . .even when she is asleep.

Blaming gun deaths on guns, is as illogical as blaming Arson deaths on matches.

All trigger fingers should be registered. Just as a gun will not work without
a bullet, it will not work without a finger.

If guns are so evil, why are they so often used in the name of God.

Ask not how a gun may harm you, ask instead how it may save you.

Laws waived at a criminal lack the impact of a .44 special.

Sign on the window of a burglarized house. "Hollow point test center, test
subjects needed".

Repeating firearms do wonders for repeating criminals.

Burglars hate light, especially muzzle flashes.

Correct DFwight, HOWEVER where you data needs to be
revised is found in the new licence applications. Their almost
zero. Number of Generals and Advanced calls dropping out
or not renewing: up 15%. Read Wayne's editorials in 73. He is
right I am afraid. FCC official figures and trends bear out a
stead decline in ham radio for the next 5 years, then an exponential
drop to 2015. (assuming historical baseline statistics and plotted trends)
I wish it were otherwise too, but what young person, meaning DROVES
of young persons want to spend ups of a thousand of dollars, take a
test on arcane theory, (worse yet...)-->code....just to talk to a bunch
of old men on HF, who double 6 times out of 10 when they transmit
and don't even realize it? (listen to 40 any time during the day and see
what I mean) We are OBSOLETE Dwight, a curisoity, perhaps a
resource to some, but technically and operationally obsolete nonetheless.

I agree. If they want to keep their national/ethnic pride, fine,
use their former languages/customs in their _homes_, for
instance, and adapt the customs/language of their new country.
Although in countries like Switzerland, spoken languages are
diverse. I beleive there are German, Italian, French, and
Esperanto, and English. I know there are several different
printed language newspapers. That kind of setup maight work
there, but I don't think it will work here.

Now THERE, in a nutshell, is WHY White Americans are loosing this battle.
Instead of standing our ground and making the INVADERS leave, WE leave instead!

Dan, I am not critisizing YOU per se ... many many Whites, including my family, are "guilty" of this behavior. Whites WILL lose this country that their forefathers built, fought, bled, and even died for, as long as they continue to flee rather than fight.

Don't believe it. Those other technologies were non-participative. The net is the most efficient communications medium available to the common man, and it doesn't have many of the drawbacks that radio has.

What we have to do is see the problem ahead of us, and position ourselves to fit through the holes in the net.

Now that we don't require high-speed CW (the radio equivalent of forcing someone to build a biplane before flying an F-16), one of the big stumbling blocks is gone -- but I haven't seen ONE news story (print or broadcast) mentioning this in the mainstream media, because hams aren't TELLING the mainstream media about it.

> Dwight Stewart W5NET

I tend to agree with you Dwight.
I'm not a ham and probobly never will be. Never had the discipline to learn code.
Sometimes, code can get through where voice can't.
Listening to some of the hams on my scanner talk about old times and what ham
radio
was back in the 30's 40's 50's 60's and 70's is a wonderful experience.
True, technology has changed. Where hams built radios, amplifiers, and antennas,
today's people are building computers, networks and whatnot.
Sometimes at a garage sale, I find an old shortwave receiver, with "8 transistor"
blazed on the front of it. Nowadays, it is all microchips and digital technology.
Newer hams with digital tuners can lock right onto a frequency.
They'll probobly never experiment with a <good God should I say it?>
old fashioned dial tuned radio with the little stick in a window showing you
what "frequency" you're on. Their loss.....
Many people depend on ham radio and don't even know it.
Storm chasers use ham radio.
What about natural disasters? Hams are usually the first to set up
an emergency network of radios to get messages through.
Remember when San Fransisco lost telephone service in many
neighborhoods as a result of the earthquake?
How about the current situation in Los Alamos New Mexico?
Hams are probobly getting traffic through, assisting law enforcement
and fire crews with communications. There is no substitute for experience.
Just my 2 cents worth....

That's true, but the key statement is "armed homeowner" I'm sure it WOULDN'T bother the bad guys at all (barking dog or not) - if they knew the homeowner WAS NOT armed.
the best neighborhood cop is an armed homeowner.

Agree, but how often? Perhaps every 3-5 years a written exam would suffice.

>
> Step 2: The passing score for written exams should be 90% not 70%
>

I think 70% is a bit low, but I also think 90% is a bit high. Maybe 80%.

> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Forget this one. Code will be gone as a requirement very soon. Don't get me wrong, I don't think this is necessarily a good thing.

> Step 4: No-code license should be one year non-renewable.

Bad. Very bad for the hobby. If someone is happy with the no-code license and what they are allowed to do with that license, let them keep it.

> Step 5: Remove negative influences by disbanding the ARRL.

No comment here.

You personally can make a statement such as this? Wow, you know a lot more folks on a personal level than me. You know the whole state, and all of their concerns? Hmmmm.....

> Not one nut stands on a steet corner or writes a letter to an editor
> saying that CONFISCATION is next. It's ludicrous.stupid and
> ebarrassing.
Actually, registration can and HAS LED TO CONFISCATION in other nations. If I own a gun, I am not 'The Problem(TM)', and my registration will be of no use to anyone, except it will be information useful during a wholesale confiscation.

Try punishing the criminal FIRST before you punish the passive elements, and destroy MY constitution. Intervening government is what makes our "forefathers roll over in their graves."

> The downfall of this nation will lie in the uncontrolled proliferation
> of such things as gunshows during which any loony can walk in, plunk
> down some bucks and walk offf with a deliverer of death.
I beleive the downfall of this nation, if it comes will be due to either misinformation, or uneducation. I can name many various places that I can obtain many various items where "any loony can walk in, plunk down some bucks and walk offf with a deliverer of death."

Bottles are free, and just laying around. Gasoline is cheap and available to anybody, kids included. I could make a firebomb any minute of any day of any week of any month of any year. So does this mean we make gasoline and bottles REGISTERED or CONTRABAND?

I kept hearing about the kids in Columbine having BMW's. They could have, on an outside pep-rally day, run over and killed many more students and teachers than were killed by BOMBS and guns. Don't laugh or claim this is a silly analogy. They kept referring to DOOM!, the game, and there is also a popular game called CARMAGEDDON where the object is to run over people while driving a car. Remember that they snapped, so most anything was possible....

So, if this took place, would we be trying to rid society of deadly cars? Specifically those heinous BMW's? Do you know that inattentive and selfish cell-phone-user-while-driving drivers kill WAY MORE people (kids, like in Columbine, too) than were killed in Columbine? Are cell phones illegal? (yes, I know they are REGISTERED).

Plumbing supplies were used to kill that day as well. KIDS can go buy plumbing supplies, AS DEADLY AS THEY ARE. Why aren't you trying to get all pipes, wahsers, elbow joints, end caps, etc. REGISTERED? How many kids did the BOMBS take out that day? Hmmmm...not much mention of this in the media was there? Noooope. Guns were The Problem(TM).

> Question: why don't you rant and rave
YOU win the award for the most ranting and raving, Buckaroo. Ask ANYBODY!

> about your computers being registered? They most certainly are and you
> know it. If you screw around on the Internet and create a life
> threatening situation or try to disrupt commerce by means of viruses,
> by having registered with an ISP, the Feds will get you.
INCORRECT. I can introduce viruses, worms, Trojan horses, etc. onto the network in an untraceable manner. The dipshits get caught. The Melissa virus/worm coder LEFT HIS NAME IN THE SOURCE CODE, then thew his machine in the trash of his apartment complex. Duh. That's the first place the Feds looked!

If what you say is true, how come there are HUNDREDS and THOUSANDS of untraceable viurses and malicious executables in the wild?!? How come there are HUNDREDS of new ones each WEEK that are untraceable? I have held Information Security and Virus Control positions, and the FEDS are behind the 8 ball....

> We are all safer by knowing what exists,
Yes, and Russia is the epitome of this concept. So, when is your permanent departure date?

> where and when and yet you "gunnets" who've sold your souls to the
>NRA care nothing about the safety and security of your fellow man.
AHHHhhhh....hate to interrupt here, but UNREGISTERED GUN OWNERSHIP is a basic AMERICAN premise, and just because I believe in this doesn't make me any less caring about the safety and security of my fellow (law abiding) man. SPEAK FOR YOURSELF, and TRY USING FACTS, not your emotions.

Actually, I WISH my whole neighborhood owned guns. Guns in the right hands equal less crime, more security, and more safety. (for the right people...if you're breaking into houses, God help you....)

> The founding fathers must be turning over in their graves seeing how a
> basic tenet of the Bill of Rights is being raped in this nation.
By misinformed or uneducated people that would rather RAPE the CONSTITUTION versus actually punish the criminal. Why is it that you can be a CONVICT, and keep your rights?!? Try ranting and raving to get criminals to LOSE their rights and actually have punishment for crimes.

Why doesn't 'Free Willy' declare OPEN SEASON on CRIME? If our "forefathers are rolling", it's because the basic American citizen has power that the government is diffusing. This is the power to fight to defend your life or property ABOVE and BEYOND government CONTROL. If you break the law in so doing, that is a matter for the courts to decide,

and a ruling will ensue. But by doing so and NOT breaking the law, then the government shouldn't even be IN THE PICTURE.

> Gun owners-BLAH, BLAH, BLAH you're going to have to register and
>license every weapon you own OR ELSE and if you don't like it,
> you're going to do it anyway!
Ja Voll, Herr Kommandant! (sorry about the spelling...)
HAVE TO?
OR ELSE?
DO IT ANYWAY?
Says who? YOU? YOU now run the Nation? Have you got a RUDE awakening coming! Like the silent body of this nation is going to just let YOU dictate! Hahahahahahahahahahahaah!!!!!!!!!!!!!!!

Why don't the CRIMINALS HAVE to do ANYTHING? Why is the easiest answer to take away BASIC rights? The criminals now have more rights than those that have jobs and pay taxes!

NO, I do not belong to any gun clubs, or support any. I just support the right to bear arms. (Especially to defend the Constitution.)

You are either uneducated, ignorant, or a Socialist. Pick one, or more.

In order for the coax and capacitor deal to work is you must
electrically detune the ground wire from the frequency of operation.
Thus it will only "work" on one or two freqs, if at all.

Try using a "counterpoise" wire. You don't need a fancy MFJ "artifical
ground" to do it. Just run a wire 1/4 wave long around the baseboard
of your room. Insulated because it will be HOT with RF. Keep it away
from metal and anything that will readly burn in case of a arc. Do
this for any and all frequencies that your having trouble with. If you
need to use multi core insulated wire and cut the lengths accordingly.
Such as rotar cable, etc.

The MFJ thingy is basically a tuner on a random wire used for ground
(RF). Why waste your money?

Wouff Hong,
Hows this for a suggestion? Instead of doing away
with the CW testing, lets add testing in the other modes!
We could have CW testing, RTTY testing, SSB testing, SSTV
testing, PSK31 testing, FM testing, Packet testing, and???
That should settle this whole obsolete/antique/unused
misconception about the different 'modes'.

SUMMER Tech Class -Lindenhurst

Great South Bay Amateur Radio Club Amateur Radio Classes

Summer Technician class -Saturdays 9-11:30 AM

The Great South Bay ARC has scheduled Tech classes beginning
on Saturday July 8, 2000 at 9:00 - 11:30 AM and will continue
every Saturday until August 12.

All students are required to have the new version study manual
Now You're Talking! All You Need For Your First Amateur Radio License
4th edition c 2000 which will be available in May 2000 from the ARRL,
225 Main St., Newington CT 06111 and your local Radio Shack.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall,
200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center
(ARES/RACES Room), access is gained via the door at the bottom of the
stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is,
have them contact Phil Lewis N2MUN (631)226-0698 for further information
or just come on down to class. The class instructor is Walter KA2RGI.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

So far that REMF (Rear Echolon MF) has not caused much damage. Other
than scraping the bark off a few trees he hugged. On this
subject...can you believe a draft dodger and a REMF in the White house
at the SAME TIME? I'd love to hear their "war stories".

Well no I don't think a multi-lingual society will work in this
country. And why? We are just too dang diverse, and then add multiple
languages to the mix and we have a great country ripe for revolution
and take over by anyone that has their act together.

Back in the late 19th and early 20th centuries we had a massive influx
of immigrants. All with their own customs, languages and attitudes.
However by the next generation the "American" was predominant. My
mother was second generation Italian/Austrian. She and her 12 siblings
were FORBIDDEN to speak Italian. Why? who knows. But by the time I
came around it was all but forgotten. As were the "different"
customs. In otherwords we assimilated into AMERICAN SOCIETY.

And there is one more minor point here folks. ENGLISH, not German, was
decided upon as the OFFICIAL LANGUAGE of the United States.....way back
in the 1700s. I might add by only 1 vote. But its official.

What purpose would this serve?

I can understand retesting for say, a drivers license, as the loss
of those skills can kill someone. But retesting for HAM? Why?

> >
> > Step 2: The passing score for written exams should be 90% not 70%

Yep. Code killed this hobby. If it had been killed 20 years ago, the
hobby might still be viable, with the new blood it might have kept up.

>
> > Step 4: No-code license should be one year non-renewable.

Good, you took the bait. Since you're saying that weapons are for
just self-defense, then you'll no doubt agree that it is completely
unnecessarily for a bullet to travel up to a distance of one mile.
Let's say you only need a protective perimeter of say, 10 yards
in radius. Then you won't mind having ammo sold that will only
cover that distance. We'll ban all ammo that can out-distance that
range.

>Yea... sure... if there is an HF amateur allocation to communicate on!

Name one organization that has made a bid on amateur HF frequencies.

>Go back to the history you keep quoting---amateurs had to bust ass just
>to get what they have---

Individually, amateurs' efforts didn't amount to squat. It was the ARRL
which fought for each and every Hz we currently have. They were invited
to participate as members of the US delegation at each and every
international radio conference.

>and we keep on loosing bandspace.

On the contrary, we've gained three new HF bands. Our only loss was
the little-used 11m band. As we speak, there is a proposal to give us
new HF and LF spectrum, including a sliver near 5 MHz, and turning
1750m over to hams.

The only spectrum we've lost is up in the V/UHF range; a code-free
tech license was supposed to save those frequencies, though.

>Overseas gets
>new VLF allocations while here in the States a gazillion members of
>industry first have to decide if they need it or not before hams can
>have access.

VLF? That's 3 to 30 KHz. Few US amateurs would have the real estate
to efficiently operate way down there.

>The government auctioned off our national resources when
>they opened up the the VHF/UHF portions of the spectrum to the highest
>bidder

You mean the Technician license failed its intended purpose? Pity.
What are *you* doing to protect our upper spectrum?

What is going on? I have never in my 47 years seen propagation so poor as it has been for the last week. It is still bad. Basically above 4 Mhz is dead.
Is it that or has everyone junked their radios?
It is not my radio as nearly as I can tell as some things from tine to tine do come through well. I just scanned 20 Mtrs and heard ONE signal!

Finally someone with some real insight to the problem at
hand......CRIME. Why are so many folks getting weapons to defend
themselves? What are they defending against? Right.....CRIME.

Do you think that if we attack the problem instead of the system that
it may work a bit better?

Howdy Gil,

Sounds discouraging for sure.

Do you by chance check the NCDXF/IARU beacons? Very useful system.
http://www.ncdxf.org/beacon/

Looks like the "A-Index" has been somewhat high. From SEC Alerts/Warnings:
"
Type II Radio Emission 12 May 2000 23:16 UT
Comment: Estimated shock velocity = 581 km/s

Magnetic A-Index >=20 Observed 13 May 2000 03:00 UT
Comment: None

The following Alert ENDED at 06:00 UT on 13 May 2000
Magnetic A-Index >=20 Observed 13 May 2000 03:00 UT
Comment: None
"

A quick glance at their "27-day Outlook", appears, propagation will improve
next week?

Regards,
Jim

Howdy,

ABW ++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW ++ will also download and display up to fourteen selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW ++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of useful when interpreting the propagation reports and forecasts.

In addition, ABW ++ provides a beacon-cw simulation function. This function uses the system sound card to create the international morse code sounds of the NCDXF beacons. This is mainly intended for demo and training purposes.

Screen captures and basic information along with the publicly download able version, are available at:
http://www.taborsoft.com/abw/

Indeed promtotion of the Hobby is the critical feature the
current changes are by and large unknown to the General Public, Indeed
the general public in my experence, if they know that CB and Ham radio
are different things, still don't know such things as the fact it has
been possible for the last ten years to obtain ANY license without
code testing (indeed I was amoug that group till 3 years ago

This IS just barely possible, but it would take declaring that
ARRL was on a worse level of threat to NATIONAL security than than was
the Comunist party during most of the Cold War or on the same level as
the Bund (American Nazi's during WW2) or the Japense Americans of the
same period

It can be done but what would be the point. The ARRL did not
make the recent changes, the FCC did.

Hope you take the correction in the sprit it was intended

gievn the ammount of change that occours in electronics etc
retesting in some form on our 10 year renewals would likely mean that
the current crop of Hams for example I know several Extras who do not
know the RF emissions rules as well as I do as a mere tech.

I think it would be an improvement, but we will see Liquid He
flowing through the street of Hell first

Good point Dan - another reason I think it won't work is that the country will
go to hell before that happens.
America has it's own tradition, history and culture. Granted it was derived
from a mixture of all(standing for the same principles) in the early days and
has made this country great. Catering to, or developing a multi-lingual society
here in America will only weaken this great nation.
In two hundred years this country has risen to the top because of it's
principles and beliefs - we should keep it that way.

"...BUT DAMMIT, you're going to have to register and license every
weapon you own OR ELSE...."

I have two old friends who spent careers as homicide detectives. One
in a large eastern city, the other in a smaller Northwest town. They

do not know each other, but both of them have told me the smae thing. "Registration doesn't work." "It makes the politicians look good and feel better, but it rarely prevents crime, or helps me solve a homicide." "Only a really stupid murderer would use a gun resistered to himself or anyone close to him."

If registration is the answer, then why does the Northeast with almost universal registration, have a significantly higher violent crime rate than the Southwest with very little registration?(latest FBI figures).

Do you think for one minute that burglars, gang members, crack dealers, car jackers or store robbers will register? The only response you"ll get from them is "F*** YOU AND YOUR REGISTRATION."

So who does that leave? It leaves a lot of NON-criminal Joe Six-packs and Michael Martinis who are NOT commiting the crimes, and don't "Need" to be registered in the first place. If you think that honest people "need" to be registered, then you "need" to take a good hard look at those who ARE commiting violent crimes, and see how little effect registration would have on those who really "need" it.

Those interested in communicating by radio, antenna, and ionosphere
will continue to be attracted to the hobby/service; those that aren't,
won't.

The outline of our present HF allocation was created with fewer than
20,000 licensed amateurs. If our number dwindles to just double-digit
thousands as before, there will still be plenty of folks to talk to.
We might have to go back to building our own gear again, but that in
no way will be detrimental; on the contrary, that will be good for the
hobby/service in that only folks with technical interests will be
licensed and on the air. (Before you criticize my last sentence, read
the fundamental purpose of the ARS as written by the FCC, attached below;
pay special attention to paragraphs (b), (c), and (d).)

73, Jeff KH6O

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Jeff tried again after Tim wasted him ..
Nuclear weapons? Biological weapons? Chemical weapons? How about surface-to-air missiles?

My reply:
Allow me to echo Tim's comments here. The discussion is about personal firearms to be used for sport shooting and home / self defense.

LAWS rockets would be amusing at the range, but would be a mite spendy for regular sport shooting. Unless you're a Gates or a Rockefeller.

In terms of home defense, my goal would be to drop the intruder, not level the 'hood.

Glad to have you in the debate, Jeff. Keep it "apples to apples", ok?

Don't be so hard on him Beachmaster. He's aparently a go-with-the-flow kinda guy.

Remember the fuss over "Saturday Night Specials"? And suddenly, everything was a "Saturday Night Special"? Colt Python, Ruger 10-22, Springfield M1A1, Mossberg 590, didn't matter what it was .. if it was a gun, it was a "Saturday Night Special". Why? Because CBS News at 6 told us so.

Then along comes the term "assault rifle". Now everything is an "assault rifle". Colt Python, Ruger 10-22, Springfield M1A1, Mossberg 590, doesn't matter what it is .. if it is a gun, it is an assault rifle. Why? Because Komrade Klinton told us, "these things are meant for the battle field, not for the streets".

Here's 2 questions for Rosie O'Donnell, and all her "expert" friends.

Which of the following is NOT an assault rifle?
a) Browning Buck Mark
b) Colt Python
c) Ruger 10-22
d) Colt 45-1911
e) Hemi-Cuda
f) Dodge Slant-6
g) Kenmore Dishwasher
h) Gateway 2000
i) Commodore 64
j) All the above

Which of the following IS an assault rifle?
a) Browning Buck Mark
b) Colt Python
c) Ruger 10-22
d) Colt 45-1911
e) Hemi-Cuda
f) Dodge Slant-6
g) Kenmore Dishwasher
h) Gateway 2000
i) Commodore 64
j) All the above

Well .. ??

Keith quoted Peter:
>> My current dog, also a Chihuahua

and replied:
>A Chihuahua isn't a dog. A Chihuahua is >a BARKING RAT.

Doesn't matter to intruders.
What they are scared of is that barking - by anything - will wake up occupants and have them alert and armed by the time the burglar wanders across them, or that the dog will lead the armed homeowner straight to them.

You accept news accounts and the opinion of the uninformed as the gospel
truth. I send you to a URL with the ICAO report and suddenly you are a
doubter.

Apparently, your worldview won't permit you to see anything you don't
want to see, so I'm going to stop annoying the pig.

> What do you think?

I agree. The problems evident on the bands arising from a lack of knowledge and expereience are insignificant compared to the problems caused by people who know, or should know, better.

I haven't seen any statistics where there is any indication that the higher the licence grade, the lower the problem per licencee group. I must admit that I did this about 4~5 years ago and more recent surveys may indicated otherwise. I seem to recall somewhere that the FCC took a similar view in relation to some aspects of the licence grades in the recent discussions about licence testing, but I'm happy to be corrected if my recollection is incorrect.

As to innovation and change being required to attact new Amateurs, I think that even without any change, it would be possible to attract good quality Amateurs with more effective promotion of the hobby. Of course, critically assessing and modifying the existing regulations and attitudes won't hurt either.

Mark.

Are you intending to send him/her a private email? Perhaps that's why
he/she don't give one. ;-)

More seriously though, when I post with my home email address, I get
heaps of crap from organisations that skim the addresses. I just delete
them, but that sort of thing really bugs some people. I don't even look
to see if mail comes the mj-deja.com address, so I don't care how many
times it gets picked up.

I think that the ideas presented by a poster either have merit, or
don't. A valid email address doesn't make it any more sensible if it is
stupid or any less credible if it is well thought out.

Having said that, using "Integrity" does seem a triffle pretentious to
me. :-)

4211. Castro vs. Cuban-Americans: Two Hams Face Off, att: Curt

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-13 00:00:00 UTC
From: Sherins@webtv.net
Message-ID: <13160-391CF0D4-98@storefull-247.iap.bryant.webtv.net>
Source record: 111322

The issue: Enlightenment. The "party line" that you've been espousing yields neither peace nor international cooperation. If an hour with Jose Basulto can debunk my most closely held opinions formed over 40 years, I fear our government is less than forthcoming.

In what looks like a blind rush to support our government, please reflect on and respond to the following:

Do you know how many people have been saved by Brothers to the Rescue? Does normalizing relations include standing by when a foreign government slaughters innocent Americans in international waters?

Wouldn't one expect Brothers to the Rescue, like any other organization, to have brochures? Wouldn't you expect survival in the Florida Straights to illicit educational material from somewhere? How would you recommend that such information be circulated in light of the closed, Cuban press?

Why do you label Cuban-Americans "rabble rousers," rather than likening them to people of all nationalities who came to our shores. The history of Cuba reveals strong ties with the United States to the extent that tongues once wagged in Cuba about statehood. Is there any wonder, therefore, Cuban-Americans would still feel and act on those strong ties? After all, it doesn't take a declaration of statehood for Cuban-Americans to feel strong kinship with Cubans on the Island.

Why is it so difficult to communicate the point that dropping a small stack of leaflets was strictly a Basulto afterthought while over Havana, as he tried to draw Cuban jets away from international waters. Isn't shooting down two American pilots and planes in international waters a provocative act? How do you explain raising the responsive, second, drop of leaflets in international waters to "provocative," while the murder of our pilots doesn't merit a word in protest?

Doesn't the fact, Basulto survived over Cuba when his fellow pilots perished in international waters, demonstrate Cuba's closely scripted premeditation and U.S. misfeasance, if not malfeasance? Do you think Brothers to the Rescue would submit flight plans to the Cuban government if it thought its pilots and planes would be shot down?

In fact, Brothers to the Rescue had been cooperating with the U.S. and Cuban governments long before that fatal day; they submitted to Cuba all flight plans, which included pilots' names.

Respected Curt, cloak your writing in academic argot; however, it remains generalized naivety to my mind.

In the so-called "Ivory Tower," I think you'll agree, the tendency is too much reliance on theory and too little, on personal experience. More than most, university personnel are beholden to government in some way, which readily biases viewpoints.

Like Cuban-Americans, our Founding Fathers were passionate about liberty. They urged everyone of us to participate zealously in full political dialogue, because they knew the risk of unchecked power. Would you have it otherwise?

Though I know my position is not fully developed by a long shot, I am compelled to say that, far from neutral, your posts are tainted with obvious prejudice and bias.

If you're willing to stack ferrites, you can get lots of them for free from old computers. I got several 0.6" dia x 1.1" long from some old defunct keyboards and many 0.9" dia x 3/8" from old C64's. For powdered iron type stuff, old power supplies are a gold mine. In addition, yokes often contain large ferrites (the size of the yoke itself) and flyback transformers contain pieces up to 1/2" dia.

WOW, what an eloquent response. Is "73" your age or IQ grandpa?

To the other posters who replied, count me in on high speed, high bandwidth networks but I'm not holding my breath. As far as cell phone rates go they are constantly dropping (due to COMPETITION and a broad base of users) and in many cases they rival land line costs. I pay less than .07 cents per minute with Long Distance service included at peak times and I am positive that will be .05 by year end. Further, many big business users do even better than that.

I have nothing against HAMS but from my personal experiences as a newbie to the hobby (less than 2 years) is that there is not a whole lot of hobby left. Just a bunch of OLD FARTS reminiscing about the golden glory years (1960?, 1950?, 1930? what are the glory years). Guys move on, get over it time and technology march on. I go to local shows and it's the same thing, each show has a small number of exhibitor booths manned by guys who have ZERO people / marketing skills. These guys stand in front of what appear to be high school science projects gone wrong handing out literature that was embarrassing 10 -15 years ago. I see young people and potential HAMS walk the show floors and leave because these same OLD FARTS are busy bullshitting with each other and don't do anything to appeal to a younger more educated, sophisticated users.

Most are bunch of mom and pop companies selling crap they assembled in their garage and pass off as "state of the art equipment" circa what year 1959? Software with so many bugs that most are unusable, many still being written in DOS??? Trade Magazines that are riddled with self promotion, substandard copy, and the worst layouts and ads I have ever seen. I wonder if any of these "publishers" ever hear of QUARK, PAGEMAKER, INDESIGN? Shit, I can't believe my eyes is it really 2000?

So I ask you as a potential member to your beloved HAM community why should I care what happens to it. I have fun with my scanners, especially my AOR 8K, my FRS radios, and my computers! I love to tinker with an learn about electronics and mechanical things but even with an outside antenna on my roof in a major city I barely scan any HAM radio transmissions. Sorry, guys your hobby is not dying its in full fledged cardiac arrest :)

Thank heavens Wouff Hong is just a wild radical with innane ideas that aren't taken seriously by anybody that actually has decision making powers in these manners... most importantly you can give up on #5. I must agree with cecil; if your goal was to annihilate the amatuer radio service, that agenda will surely do it.

Well, that would certainly remove a slab of people, I would expect, but for what purpose? Can you demonstrate a need to do this? If not, it serves no practical purpose. You would need to provide pretty bullet proof reasons because the legal costs, logistical overhead and costs involved would be enormous. I doubt any outsider to Amateur Radio, such as the regulatory authorities, could be convinced that this served any useful purpose.

> Step 2: The passing score for written exams should be 90% not 70%

Such levels are arbitary and would probably be the easiest to implement IF you can show that there is a practical requirement for it. By that I mean you would need to demonstrate that there would be a noticeable outcome on the Amateur bands. I suspect that you would be hard pressed to provide it.

> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

For what purpose? Morse is not mandatory, nor does it play any significant part in SAR or other community service operations. Again, you would need to provide some evidence that this provided something that could be explained to the govermental bodies administering the rules. Clearly they recently could not find any linkage between Morse speed and appropriate operating practices, so I think this one is also a "non-starter". Given the recent changes, a reversal would create an administrative nightmare that any bureaucrat would run a mile from.

> Step 4: No-code license should be one year non-renewable.

See comments on steps 1 & 3. Unless you can demonstrate the gains this would bring (to the regulatory authority), this is also a "dead duck".

> Step 5: Remove negative influences by disbanding the ARRL.

Tsk, tsk. I doubt you could ever do this (disband the ARRL). I'm not up on the US constituition, but I'd be very suprised if it didn't have a freedom of association clause somewhere. But, assuming that it didn't, what mechanism would you use to prevent people from joining an organisation on a voluntary basis? Not only is this horse dead, it has long since decayed.

0 out of 5 for practical suggestions, I'm afraid.

Mark.

In New Jersey we have had gun registration and licensing since the 1960s and no one complains about anything. Not one nut stands on a steet corner or writes a letter to an editor saying that CONFISCATION is next. It's ludicrous. stupid and embarrassing. The downfall of this nation will lie in the uncontrolled proliferation of such things as gunshows during which any loony can walk in, plunk down some bucks and walk offf with a deliverer of death. Question: why don't you rant and rave about your computers being registered? They most certainly are and you know it. If you screw around on the Internet and create a life threatening situation or try to disrupt commerce by means of viruses, by having registered with an ISP, the Feds will get you. We are all safer by knowing what exists, where and when and yet you "gunnets" who've sold your souls to the NRA care nothing about the safety and security of your fellow man. The founding fathers must be turning over in their graves seeing how a basic tenet of the Bill of Rights is being raped in this nation. Gun owners-KEEP THEM, USE THEM PROPERLY, POLISH THEM, DISPLAY THEM, TAKE THEM TO TARGET PRACTICE RANGES, KILL DEFENSELESS ANIMALS FOR SPORT SINCE THAT'S LEGAL BUT DAMMIT, you're going to have to register and license every weapon you own OR ELSE and if you don't like it, you're going to do it anyway!

They said the same thing about broadcast radio, television, and other "technologies." Ham radio survived those and will easily survive the internet also.

Its not technology that will kill ham radio, its the people involved that will make or break this hobby. When those other "technologies" came along, ham operators banded together, promoted the hobby, and recruited new members.

Today, too many operators are going around trying to convince the world that they are special, unique, better, because they are ham operators. Bringing too many new people into the hobby would cause them to lose their fake status.

Well, to be perfectly honest, I don't think you ever will be
interested in ham radio. You're too caught up in "whats new." You
can't turn your head away from the 'whats new" ads long enough to see
the advantages of what is already out there. Keep your blinders on,
don't try to see the advantages of ham radio, and you'll be just fine.

I don't believe this to be the case, but "Joe and Jane Public" do, thanks to the liberal news media's constant portrayal of anyone who is in favor of defending constitutional rights as the enemy.

I'm just saying that I don't think we do ourselves any favors by reinforcing this negative stereotype of amateur radio operators.

I made no personal attacks until pinheads like you made asshole comments.
The fact that HAM is dying / dead doesn't "bother" me. I just accept it as a matter of fact, like typewriters or B & W televisions are obsolete. They reached the end of their usefulness only to be replaced by newer, cheaper better ways of doing things. What bothers me is the wasted bandwidth of all the HAMS wondering "duh, Why is it dying? Why doesn't anyone care but us?" I just told you why, LISTEN AND LEARN.

As for misspelling a word sorry (fucking grammar police) at least I got the important ones right like IDIOT, MORON and ASSHOLE. By the way I am neither "hyperemotional" nor am I an "adolescence" I am 34 and I will be more than happy to indulge your half-witted comments.
Last, I have responded to a post on rec.radio.scanner so take your hobby and your whining about how bad it is somewhere else you pathetic bunch of pencil protector, old fart, has-been losers. When the last one of you drops dead (we won't have to wait long) I'll piss on your grave and your bullshit HAM society. Now thanks to the morons who are representative of HAMS on these newsgroups not only do you not have a potential new member you have another person who is indifferent to your cause.

Jeffrey Herman wrote:
> He [whoever that might be] claims that weapons don't kill.

Which is correct - people kill, using whatever weapons
(including pieces of wire, metal pipes, etc. etc.) they
choose, or managing to accomplish th ejob with bare hands.

> *IF* that's true, then it shouldn't matter what weapons are
> available.

Now this is a big fallacy. It is *people* that kill [other
people and animals]. And the fact is - there always is a
certain percent of the population that [for whatever
resaons] will [try to] kill.

And just like a power-saw makes cutting wood more "efficient"
than an hand saw, some weapons make killing easier.

I.e. a weapon still requires that criminal to push the
button, to pull the trigger, or to swing the razor blade.

However realize that criminals tend to get access to
the most efficient "tools of the trade" (after all,
they are called "criminals" not because they obey
the existing laws too well). In countries where
firearms were totally banned, criminals still
had them (while "normal" citizens didn't).

Thus, common sense

> But if you wish
> to see certain weapons banned, then it must be that weapons
> do kill, and thus, Tim is incorrect.

No, Tim is correct - your fallacy is missing the fact
that since there are people who want to kill and tools
that make it possible for them to kill in very large
numbers, it makes sense to keep those tools away from
those people. Thus banning certain weapons makes
sense: we don't want a gang of criminals to assault the
local police precinct in Leopard-II battle tanks for
example, or for one deranged individual to eradicate a
whole city by detonating a nuclear/chemical/biological
device. It's still a man who pushes the button, but
availability (or lack of it) of certain tools can
make the murderer's job too easy, which normal
society doesn't want.

Oh, and think about this: it's fairly easy to argue
back and forth about guns. But consider genetically
engineered food which we're about to get soon.Think
how much it would take for a dissatisfied and not-
so-stable employee to tweak the specimen s bit.
Or for a terrorist state to develop a
"tailored" bug [with extremely long
incubation period, for example, or...]

Enjoy the Brave New World!

Perhaps. But if it's dead, why does it bother you so much that you must lose control of yourself on a newsgroup?

> As for misspelling a word sorry (fucking grammar police) at least I got the

By "adolescence" I gather you meant to use the noun "adolescent." Well, yes, you do come across as an adolescent. My goodness, you seem to delight in foul language and rude behaviour as many adolescents do when they attempt to shock their betters.

Yea great answer "who cares if we never get another member" great attitude. Thanks for making my point, AGAIN. What the hell are you talking about? I didn't ask you to do a thing for me. Originally, I replied to one of these "our hobby is in shambles how can we make it better" posts. Work? what is work about sitting your ass in front of a "radio" it's amateur radio NOT BRAIN SURGERY GUYS.

> You don't have what it takes to be a ham. Not even a poor one. Take

I am not going to TEACH you anything.

You guys want to LEARN why people could care less about HAM radio and why your ranks are almost ZERO (I guess you care because every HAM radio newsgroup is full of "WHY, WHY, WHY posts). It is because you DO NOT listen to others outside of your hobby, outside of your demographic and outside of the "good OLD BOY network you have created. As a whole you have FAILED miserably to recruit any new blood because of your stubbornness, your narrow mindedness and your reluctance to accept change. Yet you continue business as usual even as your numbers dwindle to nothing.

I Never said you insulted me personally the first MORON did by calling me and IDIOT and the other two followed suit by attacking me and my intelligence by pointing out a misspelled word.

Never met your nephew maybe he is "MATURE" for his age. How old does that make you? The Older you are the smarter and wiser you are right? WRONG!!! You gonna prove my views of the average HAM right, Brian? So far so good.

Finally, I do not know what a "scanner freak" is? I happen to own, listen to and use a scanner SO WHAT? I have a broad base of interests this which happens to be but one. I was thinking of doing something with HAM radio but after my experiences with HAM operators I guess I am proud to be called a "SCANNER FREAK" by one of you.

You idiot. When you register and license your automobile, does the state confiscate it? Don't you understand that you have a RIGHT to bear arms and no one is going to confiscate what you own? This is no police state and if you believe that anti-government propaganda bullbleep, that makes you too stupid to own a weapon. If you believe that Hitler confiscated privately owned guns, you're a fool. NO GERMAN OWNED WEAPONS AFTER WORLD WAR ONE ENDED. Not only was it PROHIBITED by the Weimar government but by the victorious allied powers. You will find these goddamned reclusive propagandists on this board who will sell you poison while telling you it's a panacea. I never ran across such blasted liars who are like they are because they neither know the truth nor care about it. They're fed all that garbage about wicked Uncle Sam confiscating weapons, come here to spread the manure and you put it on your strawberries instead of sour cream. If the people themselves are too greedy and dumb to stop the out-of-hand proliferation of guns, then the government will step in because it MUST. Every single gun of any kind by any citizen in this country must be registered and licensed NOW. Every weapon sold at a gun show must be registered and licensed, NOW. And no one should be forced to turn over a single weapon in their possession if it's properly licensed and registered. The government has no business whatsoever in messing with the right to bear weapons however it does have the right to demand responsible ownership which is what this is all about. So to all you Chicken Littles running around squawking about the sky is falling, wise up and grow up. Our government is SOUND and if the Feds are tougher now than they've ever been, there's a need for it. A lot of screwballs are running loose in America who have to be controlled, NOW.

This guy responds to my post calling me "6-year old" a "do-nothing whiner" that " I don't have what it takes" etc... and when I forward my response to his message he gets pissed off and threatens to report me to my ISP. What's a matter not enough space with all the kiddie porn on your computer? Afraid mommy might see what little boy is up to? You are a coward, you think you can attack someone then hide in the newsgroups. I post my opinions my email address and stand by my thoughts.

If I saw you on the street you would not address me in such a matter because I disagree with your position. Would you? I think not, cause they would have to surgically remove my foot from your ass.

Say hello to my KILLFILE you arrogant, piece of crap.

Sycho_Graphics wrote:

> Once again to another brilliant HAM operator, PISS OFF and DIE.

Do NOT send me any more unsolicited e-mail, or I will notify your ISP that you are harassing me. Say whatever you wish in UseNet, but stay out of my mailbox.

I will not warn you again.

Bob,

I'm sorry that you considered my previous posting to be patronizing - I
was simultaneously responding to another posting in which my methods of
analysis were being questioned. My meaning is that I do not subscribe
to either zealous or dogmatic positions - which I consider to be the two
camps that have been generally represented when it comes to matters
pertaining to the Cuban expats vs the Castro Regime. As I stated
earlier, I think the BTTR losses were tragic, but one has to consider
that while they may have been attacked outside of an agreed-upon

international limit line, their goal was to deliver seditious material of whatever form (leaflets...etc) that would find their way to the Cuban population. This could be viewed (in extremis) by the Cubans as an attack of some form on their State (which, in a way, it was). In my view, there is nothing wrong with VOA or Marti broadcasts, or propaganda distribution through covert operatives. The issue is whether such actions should be taken by private individuals, or should be left to US agencies better suited to the job.From your posts, it seems as if you believe that there is some sort of Cuban-US conspiracy to silence the BTTR. Could this be true? I don't know, but given the argument above, it would be reasonable to believe that there are some individuals in the government that might consider such direct actions detrimental to some larger gains to be made on the diplomatic front. I do not claim to have special knowledge of this situation, but I am stating my opinions based on the generally-available information from a variety of sources (including those cited in your post).

I have not changed my fundamental position throughout this discussion, but rather have refined my presentation of the core issues as I see them. As you know, the best way to fully examine an issue is through free debate.

I don't agree with your analysis of the Cuban Missle Crisis, but I will stipulate that there was more going on during that encounter than meets the eye.

> least 20:1.

Look Keith, I understand what you're saying. You're saying that because ham radio is not as popular as the internet, the internet will kill ham radio. You're saying that the internet is growing faster than ham radio, so ham radio is dead. You're saying that because there is more interest in the internet, there is no interest in ham radio.

Again, I say that is total nonsense. The internet and ham radio are two different things, and what happens to one has no real effect on the other. And there is no evidence that one is having an affect on the other - just like television had no effect on ham radio (as was once claimed), or just like broadcast radio had no effect (as was once claimed).

Yes, many ham operators now use the internet, but there is no evidence whatsoever that they are using the radio any less (or their interest in radio is less, or anything else). Many ham operators are adding computers to their radio room, not replacing their radio rooms with computer rooms.

And there is no evidence that interest in computers by young people is reducing their potential interest in ham radio. Throughout the history of ham radio, only a small percentage of young people have developed an interest in ham radio. There is no evidence that the percentage of young people who develop an interest is declining.

And ham radio is a popular today as it has ever been. There is almost as many new people joining ham radio each year today as there were total ham operators just a few decades ago. Yes, ham radio is not growing as much as the total population is growing (and that is cause for some concern), but it is not the end of the ham radio world.

> So you say.
>
> On the net.

And again, you make the subtle suggestion that because I'm currently typing messages the internet, it proves your argument that the internet is going to be the end of ham radio.

Again, nonsense. I do a lot of things in my life. I work, drive my car, eat, watch television, listen to the radio, play music on my keyboard, spend time with my other hobbies, spend time with my wife, and a host of other things. None of those things negatively effect my interest in ham radio, or the amount of time I spend on the radio.

Radio is not the only thing I do in my life (and I dare say it is not the only thing that any other operator does in his/her life). Radio, just like any other interest, has always been balanced with the other interests (and requirements) in the ham operator's life.

But, you seem to think it is one thing or the other (the internet or ham radio). I say a person can easily have both in his/her life, just like a person can have ham radio and all those other things mentioned in the above paragraph. Its not a choice between two things, its simply two unrelated things.

Anyway, I've had enough of this argument. You seem determined not to listen to my arguments, and you're certainly not offering arguments that can be supported with even common sense. So, I'll move on and leave you to your self-imposed mission to decry the end of ham radio. Good day.

Dwight Stewart (W5NET)

The thing is that you DON'T have to register a car or license drivers,
except when they are operating on public highways. I don't shoot on
public highways.

I am convinced that most people THINK they can read. In reality the words aren't there, just letters and this guy Jarrod is a prime example of the idicy loose in society and especially among the Wyatt Earpers. Listen up you damn dodo-I'm talking REGISTRATION AND LICENSING, not confiscation. Your car is licensed isn't it? Do you feel it'll be confiscated because of it? That's one example. Are you trying to tell me that you favor guns shows all across this nation in which some any yokel can walk in, plunk down green and walk off with a "Saturday Night Special?" Are you crazy? Where in God's name do you think you live, Dodge City 1885? Your thinking is NOT 2000. You will not recognize that we live in a violent society and the mass proliferation of guns is one of the reasons. Well my good man, you're going to.

<<<<<<Sorry but I don't buy your arguments. You're saying that we pushed Castro to Russia? No way. He was a tried and true commie during his days in the Sierra Maestrae mountains planning his takeover with commie brother Raul and really big commie Che Gueverra. And what did this so-called "Freedom loving and democratic Cuban" do, who in reality was nothing more than Moscow's prostitute, immediately after entering Havana? Started rounding up the opposition, shooting them and tossing them into mass graves. Then he nationalized our industries without a penny compensation. By then he was a 95% slave of Russia and our opposition to his heinous acts simply upped it 5%. The man was a pig as of Jan.1,1959 who became an ultra dangerous pig soon thereafter.

Regarding your thoughts on whom was responsible for the Cuban missile crisis, we were? Was it an American is 1917 who stood before all humanity to proclaim that we would force capitalism down everyone's throat or was it a Russian named Lenin who screamed about Marxist dialectical materialism-about how in the course of natural events communism MUST replace capitalism and that Russia's goal was to therefore communize the world?

Remember in 1945 as the war was coming to a close in Europe when General Patton met with the wrath of Eisenhower and Truman by advocating pushing the Russian armies back to the gates of Moscow now that the Nazis had been almost totally defeated? George knew back then what it took gazillions of dollars, heavy losses in Korea, Viet Nam and other places and events to prove correct. Our having ringed the Soviets with missiles was, to the mind of any anti-communist, no just cause to have them place nukes in Cuba. We were following a policy of containment while theirs was of blackmail and ultimate world domination and that's where Kennedy's folly came into play. Instead of cutting a deal with Khruschev whereby they'd remove their

hardware while we allowed Castro to stay in power, we should have attacked, destroyed Fidel and set up a provisional government until free elections commenced. Would the Russians have gone to war over such an aggressive but necessary move? NEVER. Logistics favored us by a million to one and Nikita knew it.

> damn dodo-I'm talking REGISTRATION AND LICENSING, not confiscation.

Yes. That's what everyone says. How can it hurt. And yet,
historically, without exception, confiscation has been the
inevitable result of registration. You may not be talking about it.
But that is the result. It happened in Australia. It happened in
England. It's happening right now in South Africa. It's happening
right now in Canada.

It's happening right now in California.

Gore has said he wants registration as a plank on his
Presidential platform...and he want's the public disarmed.

You may not be talking about it. Nobody is. But confiscation has
been the result of registration. Every time.

> Your car
> is licensed isn't it? Do you feel it'll be confiscated because of it?

Ask Gore. He wants the internal combustion engine banned. Hell,
ask me. Three times in 1994 the village I lived in tried to tow my
car to the crusher, because it was "a Clunker." Fully insured.
Fully licensed. Fully RESTORED 1962 Studebaker Hawk. Driven every
day. Quiet, clean. Immaculately maintained. And it was in my garage.
They came for it anyway. If not for the alarm in my garage, they
would have gotten it, too. Took a lawyer and a bunch of my money to
convince a judge that the village was out of line.

In Ohio they want classic cars off the road and in junk yards.
Period. Similar legislation is pending in several states.

So, yes, once again, registration leading to confiscation.

The only major reason cars haven't been confiscated en masse, is
the fear of the public uproar. Because, you see, no one has inflated
the statistics about automobile deaths, in order to terrify the
public. No President has stood on the sight of a mulitcar pileup and
said, "I feel your pain."

Prosecutions for automobile deaths are up.

Here's some scary statistics. During the Clinton administration, prosecutions for firearms violations have declined 44%. According to their own BATF analyses, in 1998, there were only 2 successful firearms prosecutions in Washington DC. DC, by the way, has more firearm related murders than any city in the nation, AND the most restrictive firearms LAWS in the Western Hemisphere. 2 prosecutions in 1998. There were only 8 successful prosecutions in San Francisco, and only 14 in New Jersey.
Here's something else. Clinton's figures have claimed 500,000 felons, fugitives and stalkers have been prevented from purchasing firearms under the Brady Act. And yet, the number of prosecutions in these cases have numbered less than 20.
Clinton said this past week that firearms accidents are among the leading killers of children in this country. In 1998, the number of home firearms accidents involving children under 15, has dropped to below 100, and fatalities are at the lowest level since the National Safety Council started keeping records in 1903. Over the last decade alone, the numbers have dropped 40%. Total fatalities from home accidents are only a handful.
The President has lied. For what reason would a President distort publicly and repeatedly distort such figures? To create fear, and panic among an uninformed public.

Handgun Control Incorporated, Sarah Brady's pet project, has again been caught, and has admitted to, DOUBLING the figures in gun death reports. Maryland Governor, Parris Glendening, had already sent the exaggerated figures to the Maryland House for support of a restrictive Gun Control measure, insisting they came from a source that, in his words, 'has been reliable.' Knowing full well that HCI is well known for this kind of tactic.

The question raised by these distortions of fact: why the need to lie? If the carnage is so great, why the need to lie?

The answer is simple. Proponents who quote statistics, inflate the numbers because their case is weak. Meaning the claims made by the President, Sarah Brady and others, are neither conclusive, nor compelling, in the need to restrict gun ownership in this country. And they know it, so they lie. The carnage is not widespread. The numbers are not huge. So they lie.

Interesting to note, however, that the New York Times, certainly no friend to NRA, has reported that while gun control advocates have frequently exaggerated, inflated or simply made up statistics to support their arguments, NRA has steadfastly, all along, told the truth, and reported accurately statistics refuting gun control advocates claims.

> one example. Are you trying to tell me that you favor guns shows all across
> this nation

Yes.

> in which some any yokel can walk in, plunk down green and walk
> off with a "Saturday Night Special?"

Yokel is an interesting term. So is "Saturday Night Special."
Strip away the emotionality of those terms and you find "person,"
and "pistol."

Now, do I favor gunshows? Still yes. They have been a part of our
culture for 350 years, even before the country was born. Do I favor
any person walking in, plunking down green, and walking off with a
pistol? No. But then that's what background checks are for.

Here's something interesting to note...I purchased a pistol at a
gun show in Louisiana 15 years ago. Filled out the yellow sheet, and
laid down my money. The dealer told me he would have it for me the
following week at his shop. Waiting period, you know. Not a
problem. He could then, as a good gunsmith, clean and inspect it,
and note what service may be required, and make sure it's in top
condition when I pick it up.

Voluntary and responsible. As were all the dealers there that day.
Gunshows are not repositories of weapons for dealers to arm
terrorists, or third world dictators...and they never have been.
Once again the proponents of gun control have exaggerated and
distorted the facts for the purposes of restricting one of our most
basic freedoms.

> Are you crazy?

No. Or I wouldn't be able to own a firearm.

> Where in God's name do
> you think you live, Dodge City 1885?

No, I live in Suburban Chicago. Today.

> Your thinking is NOT 2000.

Yes, actually it is. I think in terms of defense of home and
property and protecting my rights as an individual. That is also
meet, right and salutary thinking in the year 2000. You should know
that. As a radio operator you hold one of the most important
responsibilities in civilized society: the ability to disseminate
information.

> You will not
> recognize that we live in a violent society

Oh, but I do. That's why I practice at the range every week, and I
maintain my weapons for defense.

> and the mass proliferation of
> guns is one of the reasons.

Ah, but that's where you're wrong. Guns have always been readily
available in this hemisphere. Since the 1620s there have been

weapons in every home, and gun dealers, gunsmiths, and gun shows for the exchange, and upgrade of weaponry for defense, as well as sport. Keep in mind that the Continental Army was volunteer, and that the weapons with which we fought the Revolution were personally owned by the soldiers, not the Colonies.
Keep in mind that there have been weapons in every home throughout the history of the US, until this century when it became fashionable to disarm citizens.

Keep in mind that gunshows have been commonplace in every community in this country since before it's inception, but only recently has there been a cry of 'too much violence.' Clearly something has changed. And the proliferation of firearms hasn't been it.
Yes, you're right we live in a violent society. But the problem with violence, is that it can only be stopped by other violence. At Columbine the shooting didn't stop because someone said, "hey this is illegal, let's cut it out." In Jonesboro, the shooting didn't stop because someone said, "surrender your weapons to legal authority."
Illegal gun violence only stops when more guns, legally owned, are brought to the scene and the illegal act is terminated, by force or coercion.
Why the hell do you think they picked the schools? Or the walk into office buildings in Manhattan? Because they knew that no one on the grounds of those schools was armed. Because they knew that no one in those offices was armed.
Disarm the public, and you have a field of sheep sitting quietly waiting for every hungry wolf to stop by and feed at its discretion. Where firearms have been confiscated, crime doesn't go down, it goes up. Home invasions in Australia are up by as much as 80% depending on which source you read. PBS, no NRA supporter, btw, reports 60% increase in home invasion crimes in Australia, up 45% in Canada where confiscation is currently underway. On the other side of that coin, where concealed carry has been encacted, violent crime has gone down. Even the government's own analyses have shown that. In one rarely reported case, a student walked into a highschool and drew a weapon and while he was taking aim, was terminated by an armed teacher. Averting certain tragedy.

But you don't want to think about that.

Yes, we live in a violent society. But restricting access to defense is not the answer. Because, time and again, it has been proven by the government's own statistics, where legal access to firearms has been restricted, criminals have always found a way to arm themselves. The results have been tragic.

Read the facts, not the distortions. You may find that there's more to fear than pissing off the NRA.

I would have thought that the start of Radio Astronomy came when Jansky
was working at Bell Laboratories from 1931(?) to 1935(?). To be fair,
Reber worked at home a couple of years after that and did a lot of good
work. Anyone know if Reber was a licenced Amateur or just a very good
SWL? ;-)

> 2) micro satellites

Probably one of the most significant examples (in my view anyway).

Mark.

> television, so there is no reason to believe that it will negatively
> affect ham radio either.

Your comparison just doesn't work, because there is NO comparison.
People sit and watch television, they sit and watch videos, they sit and
listen to the radio.

People only get into ham radio when they want to communicate TO others.
Which just happens to be why people get active on the internet.

> Of course, if you would have read the next sentence before spouting
> off, you would have understood that point. Those sentences were
> together in one paragraph because they were all related (one thought),

I've seen this trend developing at a greater rate than interest in ham
radio. When was the last hamfest you attended which didn't include
Internet and LAN hardware? When was the last time you went to a
computer show that DID have ham radio gear? How many places in your
town can you buy ham gear? I'll bet that there are at least 5 times
that number of ISPs, and I would be surprised if the ratio isn't at
least 20:1.

> Don't hold your breath. That sounds too much like the paperless

What do you think that licensing and registration will do? Be specific,
and explain HOW they will do these things.

TO: Lenny-t

Yes, I am a newbie so what? Am I not entitled to an opinion? I do know something about "it" because I actually tried to look for a reason and gave your "hobby" a chance and came to the same conclusion as many have. IT IS DEAD!

By the way idiot my ID is not misspell it is just the way I intended.

Thanks for making my point. I gave you my views of this "hobby" from my perspective as a newbie and as expected rather than give me a reason to join this hobby I get asshole comments like lenny-t's and dwight stewart with no substance or useful information. Kinda like the stuff I hear on my scanner when on HAM bands BLah, BLAH, BLAH, "I remember when, BLAH , BLAH , BLAH. If you guys can't even give me (a guy with exposure and experience looking for a reason to care) how the hell do you plan on "recruiting" newbies with no exposure or interest to HAM radio.

Oh, wait I guess you don't.

> and "pistol."

Why strip them away? Radiosigs is proudly admitting its bigotry.
"Yokel" means someone from a lower economic class, and "Saturday Night Special" comes from the prhase "Ni*rtown Saturday Night," which is a euphemism for ghetto drunks shooting each other between rapes and robberies.

> > Are you crazy?
>
> No. Or I wouldn't be able to own a firearm.

Note: In a magazine article, James Brady is described as spending hour after hour sitting in his wheelchair, holding a loaded .44, in the fear that John Hinckely, Jr, will come finish the job. Thus, we can see that Sarah is more willing to let a brain-damaged paranoid have a gun than she is to let my daughter have a gun.

If the F.C.C. was REALLY interested in turning out KNOWING operaters, the test should be fill-in the-blanks without pre-publishing questions. If you were told "12 question on operating proceedures,15 on rules and regs.,etc. and the study text is the ARRL handbook (or whatever), we would have knowledgable operators. But it would take a little more effort,and that would scare away the give-it-to-me crowd.So it goes--I look forward to seeing the "improved,knowledgable operators that will result. So far, in this area, dumbing down has produced "shoe leather moble","destinated",and annoucents of "for I.D."@ every stating of call sign.Welcome to Y2KCB.It was nice while it lasted---oh, I'm forgot--we should all WELCOME this demise of intellect.

4285. AEA 2mtr Isopole - need assembly measurements

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-14 00:00:00 UTC
From: Tim Kemp <wb4bah@mindspring.com>
Message-ID: <7ukths0gm6fa296596ucd5c3fcg6vle320@4ax.com>
Source record: 111164
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I sent this query to rec.radio.amateur.antenna and got no response so
I thought I'd try here too.

I have kept a disassembled Isopole behind the seat of my truck for
years, along with 3 - 5ft sections of mast and 100 ft coax. It makes
a great way to keep an emergency antenna handy for disasters. I had
the local welding shop make me a mount for the mast which fits right
into the stake holes on the bed rails.

Here's my problem. I had black "magic marker" around the mast at the
proper measured points for the cones, but over the years these marks
have worn off and I cannot find the assembly instructions.

Does anyone have the measurement chart they can scan and email me?

Thanks and 73
Tim

How about that ham radio ops are educated, free-speaking defenders
of the Constitution?

So now, if you would like to exercise the right to self-defense and
bear arms, you are a "extremists, survivalists, anti-government
fanatics, and kooks."?

If crime came your way, you might not be talking that way!

Also, if you lose a basic Constitutional right like the Second
Amendment, how long do you think the right to communicate
freely on HAM frequencies will last?

This is a precursor to losing many rights, and many lives. Happens
EVERY time...look at history! Even RECENT history!

If you don't know history, you are condemned to repeat it!

Kevin:

More Re: Marconi the amateur.

I have in front of me here a hard cover book "The wireless experimenter's manual", by Elmer E. Bucher, Wireless Press, Inc. 1920, LCCN 20-5750, LC Call Number TK9946.B85. In the back of the book is a tear out page which is an application form to join "The National Amateur Wireless Association", the fee for joining is $2.50. The address for the Association is given as 326 Broadway, Room 301, New York.

The head of this Amateur Association is listed as: Gugliemo Marconi, President
There is a National Advisory Board of Vice Presidents listed, which includes: Prof. Arthur E. Kennely, Harvard, Prof. Alfred N. Goldsmith, College of the City of New York, etc...

The text on the application reads... "Join Now" You should be a member of the organization that is doing real things for the advancement of amateur radio. etc.... I could make a xerox copy of the application form and fax it to you if you wish.

In recent years we have such "amateurs" as...

Phil Karn KA9Q...

who almost single handedly introduced the Internet's TCP/IP protocol suite to the modern personal computer [IBM clones as opposed to the Unix based computers] by the release of his "KA9Q" TCP/IP "stack" as free ware. Many professional programmers had said that the base PC with the 8086 microcomputer and 640 K of memory could never support such a complicated communications stack and that only powerful Unix machines could do that! Well... Phil did it anyway and then...

This KA9Q "stack" was picked up and modified by many commercial interests and led to the exponential growth of TCP/IP on the PC platform, and made a very large contribution to the commercial growth of the Internet.

Try the AEA website, although I had an VHF Isopole for about
8 months before I took it down and sold it at a hamfest. Had to
be one of the worst performing antennas I ever used. also very
flimsy in construction. Again, try the website, but you'll do much
better with an old Cuschraft Ringo or Hustler.

>and explain HOW they will do these things.

I love it when people use the argument that you have to register and be
licensed to drive a car, so why not have it for guns?

Last week, a local man was sentenced to 14 years in prison and had his
drivers license revoked for life for killing three girls while driving drunk.
He was doing 75 MPH in a 35MPH zone, when he ran a red light. His blood/alcohol
level was 2 1/2 times the legal limit, and he was driving on a suspended
license (no insurance) These facts didn't keep him from getting behind the
wheel of a car, and taking the lives of three teenagers.

Criminals don't obey laws. That's why registration and licensing won't work. It
only puts the burden on those of us who *are* law-abiding citizens.

BTW, firearms ownership has this little thing called the Second Amendment
protecting it, therefore it is a right, unlike driving a car, which is a
privilege.

After you deny saying those remarks, after you call me a liar and demand an apology, that's all you have to say? "I'll take credit for posting it here." Sheesh.

>but you still twist and spin a person every word...

No spin or twist -- you said blaming gun deaths on guns is illogical. I interpret that to mean that you believe that "guns don't kill, people do" (a popular slogan). If you do in fact believe that, then I'd assume, to be consistent, you'd agree that ANY type of weapon should be available to the public since "weapons don't kill"; if you disagree, then your original contention was false.

The better question is: WHAT does this have to do with CB, unless to entice people to the 2 meter CB band? We should go on the Hambo news group & invite people to CB instead!!!!!
Dave!!!!!

Blaming gun deaths on guns, is as illogical as blaming Arson deaths on matches.

"Blaming gun deaths on guns, is ... illogical..."

implies

"Guns don't cause gun deaths"

or

"Guns don't kill."

> 'Doc

Actually, in theory, I think this has a lot of merit. It would be akin to being licenced on different types of aircraft. The certification would apply only to what was being tested - which is what testing should be about, don't you think?

It would eliminate the absurdity of using a Morse test to grant access to every mode on HF. For example, the Morse test would grant Morse access on every band - a much more logical and sensible system.

It is the practical issues which make this purely academic. (1) The logistics of doing so - You would need an examiner who was certified in every possible mode and you would have to be certified merely to try something new; and (2) Who will do the testing for new modes?

"The devil is in the detail." as a workmate is wont to say.

Mark.

Oh, I gather that it must be something to do with the Monica incident. I can't say that I took much interest in the story. Understandable, I guess, because I'm sure not too many people in this NG would be interested in what John Howard is doing - I'll let you figure that one out. ;-)

Again, why? The loss of the skills learned, in todays appliance
operator enviroment, will result in no degradation to the hobby,
the operator, or those around him.

Well, let me rephrase. The requirement for code into any level of
HAM radio did kill the hobby, not code itself. If there had been
a no-code class of license 20 years ago, it would have allowed a lot
of people into the hobby that would have helped to enhance and
enlarge the hobby.

Those people would have been more of a voice to the FCC, as well
as helped to bring new technology to HAM radio.

Instead, we declined.

But Tim said that weapons don't kill. If (and only if) that's true,
then it shouldn't matter what weapons are available.

Either Tim is correct ("weapons don't kill") or he isn't. It seems
like the old boy wallowed into a bit of a paradox.

I see that you, too, are caught in Tim's tangled paradox:

He claims that weapons don't kill. *IF* that's true, then it
shouldn't matter what weapons are available. But if you wish
to see certain weapons banned, then it must be that weapons
do kill, and thus, Tim is incorrect.

"What a tangled web we weave, when we learn to deceive."

Good for you Curt--a chemistry professor who thinks political science as well.

Your last post came much closer in moderation to my admittedly formative positions. Yet, I also find your writing patronizing to the extent that you portray yourself as walking in rarefied air. To assume more knowledge or a broader position than a debating partner before exhausting the dialogue is a mistake akin to arrogance of power. Please do not consign me to a narrower picture, since you have no idea where I've been and what I've done.

Truth is, I've been fascinated with the Cuban revolution ever since meeting then-Cubans Alberto Bacardi and Louis Godoy at a private high school. In the latter 50s I bought "18th of July victory" bonds supporting the popular Cuban revolution gaining steam in the Escambrey Mountains. I watched Castro enter Havana to cheering crowds, saw him at the U.N. in New York, where he was snubbed by our government as he sought a place to stay in Harlem, then was embraced there by Kruschev.

Here's an contentious opinion proffered so you will accord me a reasonable sense of parity: Contrary to popular belief, the U.S. caused the Cuban Missile Crisis. Besides B-52s and Polaris submarines, the U.S. had surrounded the Soviet Union with land based missiles, a situation which made Kruschev bristle, sparking the crisis.

None of us should simply go along with government policy, assuming it, correct, any more than, domestic policy. Proven in your chain of posts, you've turned from the "Clinton spin" at least 25 percent while claiming to be chiselled in granite.

Many editors do not publish all that is submitted to them. But the fact is that there ARE people protesting registration precisely because of the confiscation issue. Historically the record is clear. Without exception, registration has led to confiscation. It happened in England, and Australia. It's currently underway in South Africa, Canada and in this country, California. Gore want's it as a plank to his platform for that reason.

Home invasion crimes are up in England and Australia. Some figures I've read are as high as 80%. PBS reported over 60%. Morton Grove banned handguns in the 80's, since then burglaries are up substantially.

On the other hand, states where concealed carry has been passed into law, such as Florida, not a single OK Corral has occurred. In fact, where concealed carry has been passed, (what is it now 16 states?) violent crimes have fallen considerably.

Taken in the context of history, firearms have been a part of the culture since before the country was founded. In fact there have been gun shows on this soil since the mid 1600's, and yet, only in the last few years has there been perceived a need to ban them. Firearms have been a part of the home since the first settlers landed, and yet, not one school shooting had taken place for over 350 years. What had changed? Since the firearms hadn't, it had to be the people. The culture and the values with which the kids involved in school shootings and their copycat threats were involved. Something that has been preventing these tragedies was no longer in place. Everything else, including the presence of guns, remained for the most part, the same.

And in the case of the school shootings, Columbine the most notable, the shooting didn't stop until more guns arrived on the scene.

So the assault, the registration, and the historically proven future confiscation, are against those who would otherwise defend themselves, because in the matters of these crimes, legally owned and responsibly used firearms are for the most part not involved.

> It's ludicrous. stupid and embarrassing. The downfall of this nation will lie in
> the uncontrolled proliferation of such things as gunshows during which any
> loony can walk in, plunk down some bucks and walk offf with a deliverer of
> death.

Clearly, as pointed out above, the proliferation of gunshows has
been part of the cultural landscape for 350 years, with legal
purchase by responsible parties as common as fast food sales.
Banning gun shows, only affects the legal and responsible. As
demonstrated by the Columbine shootings, and the racial killings in
the midwest, a person determined to acquire a firearm illegally,
will do whatever it takes to do so. That's not the fault of the
responsible citizen, or the gunshow. And laws as proposed will not
affect the acquisition of illegal guns by criminals. Meaning there
will more of them armed, than there will be of us.

And that's what's silly and stupid.

Peter states:
>Morton Grove
>banned handguns in the 80's, since then burglaries are up
>substantially.

And that same year, Kennesaw, GA passed a city ordinance requiring EVERY household inside the city limits to possess a firearm. Result? A low crime rate became a LOT lower. They reported a 97 per cent DECREASE in burglaries and other home invasions. And there has not been a significant increase since.

Moral of the story? If the crook KNOWS there's a gun in the place, he has a good reason to take his business elsewhere.

Pray that it will rain on their parade tomorrow. Pray that it will rain HARD. So they don't even march. Just get mad and go home.

Blaming gun deaths on guns, is as illogical as blaming Arson deaths on matches.

All trigger fingers should be registered. Just as a gun will not work without
a bullet, it will not work without a finger.

If guns are so evil, why are they so often used in the name of God.

Ask not how a gun may harm you, ask instead how it may save you.

Laws waived at a criminal lack the impact of a .44 special.

Sign on the window of a burglarized house. "Hollow point test center, test
subjects needed".

Repeating firearms do wonders for repeating criminals.

Burglars hate light, especially muzzle flashes.

You wrote that article on Friday, 12 May. It's still unexpired on
the UH-Unix news reader as article 222141 in rec.radio.amateur.misc.
Really, Tim -- lying is no way to play the game. This is all supposed
to be in fun. You've given yourself a black mark for obviously lying
like this! Why on earth would you deny that you wrote that just
yesterday? Are you ashamed of your words?

Look, I'm a Republican through and through; but I realize we *do* have
an extremely severe problem in this country in regards to gun-related
deaths. You can't deny that something does need to be done.

73, Jeff KH6O

Lets face it, you are trying to blaze a path for gun banning/confiscation. I grew up around guns. At an early age started with the standard BB gun. I knew what my little BB could do. As I got older, I began hunting. I was shown how to safely use guns. I also saw their effect on the animals that I hunted. That is all called experience, it has no substitute. When I joined the military, many of my buddies had never even held a gun. They quickly came to respect its power and proper use. Now that I am out, in my late 20's, guns part of my everyday life. I don't go running around killing people. I don't stab people. I don't run over people. I realize that the gun is a tool, like many other "lethal" tools at our disposal every day. Before you preach to me what you think has to be done, maybe you should consider the underlying problem. A gun will not harm anything until one commits to pulling the trigger. That individual makes the choice, not the gun, knife, car whatever. Use the brains that are in your head. What do you really think will happen if all guns are confiscated? I'll tell you. The criminals will still have guns and no one else will. Doesn't make me feel safe. Maybe we should be pushing for a DRAMATIC change in our legal criminal system. What do criminal have to fear these days? Getting caught? Serving 25% of the time they should serve in jail. What kind of deterrent is that. What kind of incentive will it be to go on a crime spree knowing the general population is unarmed? I think the anti gunners deep down are upset at the demise of current social values and don't have the integrity to admit that the fault is in ourselves and our present culture. They are backed in a corner trying to find the fastest way to pass the blame or point a finger. We all play that game, its human nature to not believe the fault is our own but another's. In contrast to your beliefs, it is a historical fact (although I don't have the exact reference so you people can go and reanalyze the data to fit your own agenda) that countries/states with well armed citizens, have consistently had the lowest crime rates, throughout history. Now how do you people explain that? Today's values are not what my grandparents values were, or even my parents, or even my younger brother and sister's. To quote from the movie GI Jane "Lieutenant, when I want your opinion, I'll give it to you..." That is how I and the many who stand with me feel we are being dealt with. So before you antigunners feel like you need to "give" us our opinions, you need to sit down, analyze just what real goal you are trying to achieve, and contemplate if banning guns is a real solution. You also need to go and analyze the constitution for yourself, word by word, taking into consideration what exactly the forefathers were trying to convey. Read it for yourself, don't accept another's interpretation. I don't feel banning guns or registration is the answer as criminals will remain unaffected, indefinitely. I have spent my life around a gun of some sort. Whether that gun was for hunting, target shooting, personal defense, military actions, whatever, in every situation, it was only a tool of my will. I alone had the ultimate decision to fire. Just

having a gun in my hand did not make me more aggressive or lose my values. As long as I live, I will have guns. My children will be raised around them and educated as I was. Their part of our culture will remain long after you and I are gone. Focus on the people, the minds, the values. "It is the poor carpenter who blames his tools". I don't force my opinions or will on others, why is it that you antigunners consistently do exactly that. This is my opinion, even though you people don't want to hear it. At least I listened to yours and analyzed it for myself before I discounted it. I can't believe that the country founded to be free would be so split on the issue of the tools used to make it free. I love my country, but I am disappointed in the people. How do we get the dignity, honor, and wisdom my grandparents knew so well back? Can we get it back? Time will tell.

> And you think that ham radio HAS?

You know, I think you have a problem with reading comprehension. I never said that "ham radio has" anything. My point was that the internet has not negatively affected other technologies such as television, so there is no reason to believe that it will negatively affect ham radio either.

Of course, if you would have read the next sentence before spouting off, you would have understood that point. Those sentences were together in one paragraph because they were all related (one thought), not parts to be split up and addressed individually.

> > If it hasn't affected those "technologies,"
> > there is no reason to believe that it will have any more effect on ham radio.
>
> As I said, those are non-participatory. The net attracts those who are
> interested in long distance communication for amusement. YOU, for
> instance.

So what has that got to do with ham radio? The internet has not affected my ham radio usage in any way. In fact, my radio sits right next to my computer and I'm listening in right now. If someone calls, or I hear someone that I want to call, the computer takes a backseat. By the way, I also sometimes watch tv, or listen to the radio, while typing on the computer and listening in on the ham radio.

My point of all that is that you seem to think a person can only do one thing at a time, so if a person is roaming the internet, he has to be spending less time on the ham radio (your basic claim is that the internet is negatively affecting ham radio).

And I say that is nonsense - the internet is not having that much of an effect on ham radio. And it is not having that much of an effect on those other technologies either (many people watch tv while roaming the internet, or listen to the stereo while roaming the internet, or listen in on the ham radio while roaming the internet).

Its not one technology or the other (the internet OR tv, the internet OR the stereo, or the internet OR ham radio). Most people will include them all in their lives, often side by side with the other thechnologies in their lives.

Of course, I know you probably don't see it that way. You're probably one of those people who think that in the future everybody will be sitting at their computer 24 hrs a day, with absolutely nothing else going on in their lives (a totally wired world of internet junkies, with everything in the home hooked to the internet).

Don't hold your breath. That sounds too much like the paperless office that computer junkies promised twenty years ago. That didn't happen, and neither will many of the other twisted views of the future that computer junkies claim.

Doc,
I started to write a long message explaining why I think
your stance about firearms is 'wrong'. After reading several
posts here, I decided I didn't feel like repeating what's
already been said, and some said much better than I could.
I'll just say that I think your wrong.
I've been around firearms most of my life. I know that
they are tools, and should be treated as any good craftsman
does his tools. Just because a gun can be dangerous is not
a good reason to ban or confiscate it. And don't make the
mistake that that isn't what the anti-gun people want, no
matter what they say ~now~. They ~have~ said exactly that
in the past.
I'm not paranoid, but I am realistic. Having been around
people who commit violent crimes for a lot of my professional
life, I know there are people who wouldn't think twice about
hurting you to get what they want. I also know that a majority
of them do not want to take a chance of facing one of their
victims if he/she has a gun. They may be criminals, but they
are not stupid. That's reason enough for me to own a gun.
I understand that some Australian polititon said that he didn't
think selfdefence was a good reason to own a gun. I don't
think that statement makes any sense at all! All I can say is
that people who feel that way do not have a very realistic
idea of what happens in the 'real world'.
I'm sorry Doc, but you need to walk the streets after dark
a little more often. I think you would 'convert' to my way of
thinking very quickly.
Paul

4331. Re: Question: Innovation in Amateur Radio

Newsgroup: rec.radio.amateur.misc

The first amateur was Marconi in the history books but you
might want to check out Braun, Tesla, and a few others.

"Marconi shared his Nobel prize with German physicist Karl Ferdinand Braun, b. June 6,
1850, d.Apr. 20, 1918, in 1909 Nobel Prize for physics with
Guglielmo Marconi for his work in developing the radio.

Braun, who spent his career as a professor of physics at
German universities, increased the range of Marconi's
transmitter, invented the crystal rectifier (a device that
allows current to flow in only one direction, and improves
radio transmission), and later invented the oscilloscope, a
cathode-ray-tube laboratory device that was the forerunner of
today's television and radar tubes."

Source: The New Grolier Multimedia Encyclopedia

Another great innovation that hams brought to the party
was helping people in times of distress - for FREE! Ironic
that a group of people known for "intense thrift" would give away
life saving services at their own costs - sometimes putting their
own lives at great risk too - and expect nothing in return!

Good luck with your thesis - please post it when done so we
can all enjoy it.

73!

Agree completely. Ham radio never had any universal
following of any great scope.

> Yes, many ham operators now use the internet, but there is no evidence
>whatsoever that they are using the radio any less (or their interest in
>radio is less, or anything else). Many ham operators are adding
>computers to their radio room, not replacing their radio rooms with
>computer rooms.

Well said. One misconception of some people (IMHO) is
that ham radio must compete with other interest areas.
The fact is that people often have multiple interests and
they just vary in their approach to different ones. I am
also into antique cars and model railroads...but that doesn't
stop me from being a ham on a level that I enjoy.
Just because someone has multiple interests and doesn't devote
all their free time towards being a ham doesn't mean they
are not a good ham, or should be discounted as
falling away from ham radio.

> And there is no evidence that interest in computers by young people is
>reducing their potential interest in ham radio. Throughout the history
>of ham radio, only a small percentage of young people have developed an
>interest in ham radio. There is no evidence that the percentage of
>young people who develop an interest is declining.

Agree also.

> And ham radio is a popular today as it has ever been. There is almost
>as many new people joining ham radio each year today as there were total
>ham operators just a few decades ago. Yes, ham radio is not growing as
>much as the total population is growing (and that is cause for some
>concern), but it is not the end of the ham radio world.

Actually, I wonder what the population increase is and how it
maps in growth over the last 20 years as compared to hams?
Seems to me I recall hearing that population rowth in the USA
has been almost flat for the recent past because of birthcontrol
and abortions.

> And again, you make the subtle suggestion that because I'm currently
>typing messages the internet, it proves your argument that the internet
>is going to be the end of ham radio.

Agree again. Seems that some people can't accept that.

> knew it.

There is one flaw in that proposal, however. Recent revelations from classified archives concerning the command and control structure of the Cuban troops at the time indicate that tactical nukes would most likely have been released by the Cubans during an invasion attempt by the US. Both US and KGB archival materials now show that contrary to US knowledge at the time, the Soviets had transferred launch authorization for battlefield tactical weapon use to Cuban officers on the scene, and they had orders to use them to prevent invasion at all costs. This was an extremely unusual move, and ran counter to the usual highly-centralized control structures of the Soviet Block military. One can bet that if even one of these weapons were to have exploded among a US invasion fleet, the next event would have been a nuclear exchange between the Superpowers, possibly leading to the use of the very missles that the effort sought to contain.

All in all, I think we're lucky to have survived the incident.

> Why do you feel that this is a capital offense?

Bob,

I don't believe that this was a capital offense, but it was considered to be one by the Cubans - and it was within the letter (if not the spirit) of international agreements on national sovereignty. Remember Gary Francis Powers? Eisenhower could hardly complain to the Soviets that they shot down a "civilian" aircraft with a "civilian" pilot for the "minor" offense of violating their airspace. Recall that the U-2 was not a "military" plane in the strictest sense - it belonged to a "civilian" branch of the CIA, and Gary Powers (and other "Overflight" pilots) had to resign from the military in order to be considered for U-2 missions. This is not new - the US has sent formerly military pilots into action with foreign military services when it suited them. One example of this was the use of "retired" US military aviators in the budding IAF in 1948. The problem is that international law is not clear on this point. A good question - When does airspace incursion legitimize anti-aircraft fire? I think the criterion is that the flight has to be considered "hostile". (To the State? To the party in power?) Does this mean armed warplanes, or are recon aircraft included as well? (U-2 incident) How about ownership? Are Air America planes exempt because of their "civilian" registry? Does the pilot have to be a member of a military or paramilitary organization to legitimize shoot-down? Were the Russians amiss to fire on that German kid who flew the Cessna to Red Square?

Lots of questions - few clear answers. Before you suggest that this is an exercise in word games, please recognize that this is the way both lawyers and diplomats go about their business.

My point is this: Other countries do not have to abide by the laws of a particular State. When their actions affect other countries, then they are encouraged to discontinue those actions. When their belligerence

reaches a certain threshold, military action takes place. This works both ways. When dealing with a country with a low threshold for military action, it makes sense to avoid provocation.

There have been quite a few geomagnetic disturbances lately.
A good place to check is 18 minutes after each hour on WWV @ 2.5, 5.0,
10.0, 15.0, and 20.0 MHz. for solar indicies and forecasts.

4342. U.S. Stamp Design

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-15 00:00:00 UTC
From: "Marc A. Schneider, Psy.D." <drmarc@wwa.com>
Message-ID: <0VUT4.8965$ZE4.170396@ord-read.news.verio.net>
Source record: 110993

To all Hams ! ! ! !

I have written to the U.S. Postal Service Stamp Design Committee to request a U.S. Stamp be designed to commemorate Amateur Radio for the year 2003 (100th anniversary). I also contacted the head of Public Relations for ARRL (Jen. Hagy). I then wrote on 4-25-00 to the ARRL President Jim Haynie (e-mail: w5jbp@arrl.org). It took additional days for that message to be received as the ARRL domain name had been corrupted that day. I have yet to hear from the President of the ARRL on this matter. The organization does have other things to do.

I am writing here to request that other ARRL members write to create enough grass roots presence on the issue for ARRL to be sure to address it in a timely fashion. The Stamp Committee needs three years to get a stamp out to the public. I believe that it is a good idea to have the ARRL as part of the request to the Stamp Committee and I believe that requests from various parts of the nation will also help. Since I have not gotten a reply from Jim Haynie so far I am requesting all who read this to contact Jim and to also write to the Stamp Committee as well as ask others on the air - around the nation - to also do the same.

The Stamp Committee address: - snail mail is:

Citizens' Stamp Advisory Committee
U.S. Postal Service
475 L'Enfant Plaza, SW
Room 4474EB
Washington, DC 20260-2437

I will not be monitoring this newsgroup so any questions should go to me via e-mail.

73 to all,

Marc A. Schneider

With the Solar Flux and the sunspot numbers in the mid 200's...our propagation ought to be kicking ass right now! The A index and K index have not been that high to disrupt the bands as severely as they're being disrupted. And no, my antennas are not disconnected...like the other fella's problem.
I'm not a conspiracy nut, but I'm beginning to think there is something to this HARP stuff regarding its use to disrupt communications. Any further details on this theory??

> bullets!

(Spoken like a true [anti] American....)

Doc, I am crying so hard, that I can hardly type. I am crying for
all the gun-related deaths in this country. I can selectively see
that the gun deaths are the evil ones, while other deaths, either
accidental or deliberate, are not worth of my tears since it is
only gun deaths that matter. The media has what told me how to think.

Go look up the FACTS on how Little League baseball is a killer of
our nation's children. The go look up the FACTS on how other items
or activities claim the lives of MORE Americans than gun ownership
causes. Yep, even kids with moms, diaper bags and all.

Doc, you're a lemming. Uneducated, and defiant in its goal.

I've said it before:
Doc, you're as thick as a f***ing brick.

Tatoo this on yer forehead, and live in front of a LARGE mirror.

"Criminals aren't going to register their illegal weapons."

THESE are the weapons that are the problem.

Maybe 'Free Willy' should just declare one day:
"OK, all drug dealers, turn in your illegal drugs,
and oh, by the way, estimate the amount of taxes and
back taxes you owe, and mail it in to the IRS promptly,
to avoid any penalties."

"If you happen to live near an IRS office, we'll just leave out a big
bowl of money; you can just make your own change."

Yeah, sure, that's the ticket!

What are you going to do when the Klintons and Gore destroy the very
fabric of this Nation? These people will re-write the Constitution to

suit their political goals. NOW the forefathers are rolling in their graves!

AF2Y:GET WITH THE PROGRAM? I refuse to join in your Socialist, anti-American thoughts and deeds. Looks like it's time to start another "Pinko List". Congratulations, you're at the top! Wheee!

Doc, to invoke the name of Wyatt Earp shows a lack of the understanding
of
history and the places, people and events which shaped the era in which
Uncle W lived, worked and died as well as your own. Without a firearm
in
the Old West, a man or woman could expect to be prey, today, the
criminal still
expects easy pickings. Wyatt Earp carried a firearm not for causing
trouble,
but to prevent problems in the first place. The REAL REASON for having
firearms in
the first place.
>

More laws, less enforcement, remember, linear amps are illegal but do
you
see any Federal Agency enforcing the law? Laws are made for those
willing
to follow them, Criminals don't care.

In Dodge City, everybody carried a sidearm in their work as a cowboy.
Dodge
City was wild but it was 1870 and cowboys drove their longhorn steers
from Texas to the
railyards at Dodge City. Self protection was the reason for the
firearms, wild
animals and the such.

> No, I live in Suburban Chicago. Today.

Could not have said it better. A disarmed people become SHEPOLE, to be led to slaughter by fools who tell us that "they" know best and history shows that "they" don't know anything. Case in point-Nazi Germany, lest we forget. Ant "they" said it couldn't happen here!!! Wyatt Earp's memory
has a special meaning for Jewish Freedom Fighter's everywhere, you see, Wyatt
is buried in the Jewish Cemetary in San Francisco, CA next to his beloved Josie
Marcus, My GG Aunt. Lest we forget.

4351. Code Practice Software

To anyone who's ever communicated with the skies via Ham Radio,

We are an Internet TV channel called spacewatch.com, and are currently in the process of making a show about how astronauts often communicate with others via Ham Radio. If there is anyone out there who has any experience with this, or knows anything about it, and would be available for interview, please e-mail me at ciara@spacewatch.com. I would be delighted to talk to anyone with any knowledge of this topic. At the moment the show is merely in the research stages, so any information at all would be appreciated.

Yours,
Ciara.

That might be stretching it. I think MIT's PCIP predated the KA9Q software,
and probably had a larger base of commercial derivatives before CPU speeds
outgrew them.

But look at RFC 1122 for references to the "Karn algorithm" for computing
more accurate round trip time estimates for TCP. I think there is an
ACM SIGCOMM paper referred to in there. I'm pretty sure this came out of
the work with amateur radio TCP/IP (a lot of the really good, fundamental
insights into TCP protocol dynamics in the 1980's came from the experience
of running TCP over the really crappy networks that existed then).

Doc!
Look! Unconstitutionalize the evil baseball cap!

http://www.expressindia.com/ie/daily/19990120/02052065.html

Don't let this happen here! You must go be the torchbearer
and make all caps registered here in the US! It happened in Bombay!
Don't try and think that a knife was the instrument of fatality here...
it was the CAP...ask Hillary!

Our diaper-changing moms are 110% behind you! They all can't
believe that what their young children are wearing is a direct
and undeniable precursor to certain death!

The US media hasn't caught wind of this yet, but when they do,
the dreaded cap will be ostracized from our society. All films
and photos of baseball players (young/old/professional/kids)
will be retouched to eliminate all traces of this evil head garb!

We need this Federal Government Intervention into our lives to save us
from this certified evil object. Alone, we are hollow men. We need
Federal mandates and laws to show us which are the garments of all
that is Evil!

Godspeed, brother!

Still, the bottom line is that you were wanting to know just how much it would take you to "get by" and no more. Glad you learned more after the test, but that is a red herring. Don't feel badly though. You certainly aren't the only one to want things to be dumbed down.

I agree it's not very good for some reason ? I remember operating in
the mid / late 70's and the propagation was great. If I didn't know
better I'd suspect we were at a solar minimum right now instead of
near a peak.

You're not getting one even by email.

> Furthermore you know damn well what I meant by the generic "Saturday Night
> Special" but chose to make hay with it. I find you disgusting and revolting
> and your love for guns is probabaly predicated on the fact that you come
> from a band of lawless halfwits who've spent most of their adult lives
> behind bars and I'm not talking about "Cheers" either.

Actually, you are quite wrong (again). My dad retired after a long
career as a well-known detective with a major law enforcement agency.
My mom was a court transcriber. Her dad was a member of the famous "Hat
Squad" (the elite of the LAPD Robbery-Homicide detective bureau).

> You go ahead like a
> good little boy and post that apology now or else you'll regret having
> ticked me off.

Yeah, right.

Actually, I'm just going to put you back on ignore. I only took you off
because I wanted to see if you could face the questions that you ducked.

Have a nice day.

There was never actually any proof that the missiles were removed. Nor
even that they stopped coming in.

Boy, do YOU need to reread history. Matthias Rust (pronounced "Roost")
wasn't fired on. In fact, several ranking Soviet generals lost their
lifestyles for failing to even notice his incursion until after he was
already on the ground in front of the TV cameras.

> >
> > Curt Breneman
> > KC2EBP
>
> Why are you such an apologist for Castro?

Keith,

I think you misunderstand my position - I am not an "apologist" for Castro - I have no love for the man, his party or his form of government. The point has to do with how best to deal with regimes of this sort, and whether individual acts of foreign policy are really a good idea or not.

Incidentally, I have read "Operation Overflight" a number of times over the years - it's a good historical account of the situation. Of course Eisenhower complained about the shoot-down, but it was clear that it was a hollow protest and he didn't have the moral or legal grounds to support it. We just got caught with our pants down on that one since there weren't supposed to be any means for shooting down planes of the U-2's capabilities. (p.s. It's in the book.)

My point about Matthias Rust wasn't whether they actually fired on him or not - it was whether they would have been likely to do so, and justified in trying to bring him down. The fact that some of the military leaders were chastised for the event is pretty good evidence of the outcome they would have preferred. (Dead kid, smoking wreckage, and

they would have been within their rights to do this). I suppose that the original sentence should be amended to state: "Would the Russians have been amiss to fire on that German kid who flew the Cessna to Red Square?". The point is the same.

As to your comment about international boundaries - you are plainly mistaken. By definition, the concept of national sovereignty means that countries are allowed (and expected) to defend their borders using up to and including deadly force. There is general agreement on this point. The US State Department, the World Court (The Hague) and the UN have made this clear in various ways. Bottom line: Unauthorized incursion across national boundaries is a dangerous business, and those who choose to do so risk their lives. Private incursions of the type we are discussing are just not the way to conduct foreign policy.

The question presented was 'how many questions do I have to get right in order to pass?' The guy wasn't trying to ace the test and display his electronic knowledge--he was just trying to get by. Another example of how people try to avoid work and effort, just to get by. Maybe the vec's should require 85% correct to pass?? If someone wants the ticket badly enough, they might just make the effort and study a little.

4380. Yaesu FT51-R mod question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-15 00:00:00 UTC
From: beese <zbeese@home.com>
Message-ID: <ooJT4.82272$lg.385814@news1.rdc1.tx.home.com>
Source record: 111119
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

I've searched for mods for the Yaesu FT-51R. I found one that is supposed to enable receive up to 999MHz. One of the steps says to remove two diodes near the ribbon cable. I can't seem to figure out where these diodes are. I'm assuming they're surface mount diodes--but there seems to be quite a few surface mount components all over the circuit board.

Can someone give me better directions on finding the two diodes I'm supposed to remove?

Thanks,

Zach Beese

Doc, you're as thick as a f***ing brick.

Tatoo this on yer forehead, and live in front of a LARGE mirror.

"Criminals aren't going to register their illegal weapons."

THESE are the weapons that are the problem.

Maybe 'Free Willy' should just declare one day:
"OK, all drug dealers, turn in your illegal drugs,
and oh, by the way, estimate the amount of taxes and
back taxes you owe, and mail it in to the IRS promptly,
to avoid any penalties."

"If you happen to live near an IRS office, we'll just leave
out a big bowl of money; you can just make your own change."

Yeah, sure, that's the ticket!

4386. Roots of the Castro Regime: Cuban Missile Crisis. att KW

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-15 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <16180-391F79FC-14@storefull-244.iap.bryant.webtv.net>
Source record: 111125

KW, victory for whom?

The agreement Kennedy struck with Kruschev allowed our missiles to stay intact while removing Kruschev's missiles from Cuba.

But for the United States, it didn't come free. Kennedy promised and the U.S.has complied with preventing any attack on Cuba from within our borders and from elsewhere.

In effect, the Castro regime was legitimized and protected by that crisis. A crafty dictator, Castro, with utterly no military power himself, manipulated the superpowers into doing his bidding, as the world held its breath.

WISE UP FELLOW AMERICAN HAMS, HAMSTRESSES AND HAMLETS. Because of the NRA and its puppets, your lives are endangered, Guns are not pea shooters. It's time for RESPONSIBILITY in the business of guns. Write to your Senators and Congressmen to DEMAND legislation. If it fails, then demand the end to bullets!

WASHINGTON - They sang This Little Light of Mine with children's troubadour Raffi, and when a speaker asked why their plea for gun safety should be heeded, they chanted, "Because I said so."
Tens of thousands of concerned parents - 500,000, organizers claim - gathered on Mother's Day at the foot of Capitol Hill to demand that Congress pass stricter gun laws. They came with strollers and diaper bags, in baseball caps and T-shirts, for the Million Mom March, the largest rally ever for gun control.
This was no radical protest. This was mom and sometimes dad, asserting a political voice at a family rally on the National Mall that featured a "Children's Village" with clowns and jugglers and a tent for breast-feeding.
"This is mom power," said Rep. Carolyn McCarthy, D-N.Y., whose husband was killed in a shooting in 1993 that also seriously injured her son. "We are going to make a difference ... This is a first step. This is not where it ends." March organizers say they will form a grass-roots group to press for political change, especially the licensing of gun owners and the registering of every handgun.
Nationwide, thousands gathered at dozens of other rallies, including an estimated 1,500 in Los Angeles and more than 4,000 along the downtown Chicago lakefront.
The Washington event had the most celebrity sizzle. It hummed to music by Melissa Manchester, Melissa Etheridge and Emmylou Harris and heard from Susan Sarandon, Courtney Love and Reese Witherspoon.
"We are the voice of the majority of Americans. It's time we are heard," said talk show host Rosie O'Donnell, the mistress of ceremonies and mother of three. She urged fellow moms to take on the National Rifle Association.
"The NRA buys votes with blood money," she said. "They are strong, they are organized, they are scary."
A few blocks away was a rival but much smaller rally, organized by the Second Amendment Sisters.
Many Million Mom speakers were moms, dads and kids with tales of loss.
* "I have scars that will be with me forever," said Mindy Finkelstein, recalling how bullets whizzed by her and the children at the North Valley Jewish Community Center in Granada Hills, Calif., last summer. A camp counselor there, she was one of five injured.

* "There's not a day I don't cry," said Veronica McQueen, mother of Kayla Rolland, 6, who was shot dead by another first-grader in a Michigan classroom in February. "Part of my heart went with her. I can never hold and

kiss her again."

* Dawn Anna said her daughter Lauren Townsend, 18, was a "mother's dream," a class valedictorian who was just beginning to plan her future when she was murdered with 11 bullets at Columbine High School in April 1999. "She was murdered - murdered on a school day. Murdered during school time. Murdered sitting in a school library with friends studying for her next class.

"The mothers of the world are angry and you never, never tick off a mother," she said. "The hands that rock the cradle rule the world."
Many more victims stood in the crowd, some holding photos of lost or injured children. Some sobbed quietly. "I couldn't save him," said Charlotte Gray of her 29-year-old son's death last year from a random bullet. "But maybe me being here today can help save somebody else."
The participants held placards that read: "Arms Are For Hugging," "Guns - No, Life - Yes," "Enough is Enough," and "A Million Moms Can't Be Wrong."
Linda Ridall of Burtonsville, Md., held a sign that said, "When It Comes to Gun Safety, My Husband's an Idiot." One day at home, she said, she was appalled to see her son holding a gun that belonged to her husband, an NRA member. She said she and her husband have "different opinions" about gun safety, adding, "I can't change him, but I still have a voice."
Despite its non-partisan billing, the rally seemed to attract mostly Democrats, some of whom held "Gore 2000" signs. Organizers met earlier in the day at the White House with President Clinton and first lady Hillary Rodham Clinton who, in taped remarks that were blasted over giant loudspeakers, urged Congress to act.
Lawmakers have been stalemated on a Senate-passed bill, opposed by the NRA, that would require all buyers at gun shows to undergo background checks and new handguns to be sold with child-safety locks. The march activists demanded those two requirements.
"This Congress won't be the same because of you," Rep. Bobby Rush, D-Ill., whose son was murdered with a gun, told the participants. He said the rally united parents, whether black or white, suburban or urban.
Rep. Patrick Kennedy, D-R.I., who heads the Democratic effort to recapture the House, said gun control could be a key Democratic weapon. The battleground in this election is the suburban vote, he said . His cousin Maryland Lt. Gov. Kathleen Kennedy Townsend, whose father Robert Kennedy was shot to death, was one of the speakers.
Rep. Connie Morella, R-Md., a gun-control advocate, said the rally's impact on the Republican Party will vary. "It's district by district," she said, noting that Democrats also have played a role in blocking gun-control legislation.
Many participants said they felt drawn to the march, even if they had never personally suffered from gun violence. Lisa Zoppetti, a psychologist from Oakton, Va., said she came because it was her first Mother's Day. Her husband, Michael, was cradling 5-week-old Grace in the shade. "I can't think of a more important place to be," she said.

Dan, thanks for the info. I am not sure of the specific freq involved. As I mentioned in my initial message, I had an amp and my Kenwood 440 fold back when I tried to use them on the same PS. Although I have not gotten any RF "bites", I suspect RF in the shck caused the fold back. I have been told that AStron PS's are famous for this. The other possibility is that the PS broke down under the load of both the amp and the Txcvr. My concern is that I want to purchase an amp (811 or 811H) and I'm worried that I may not be able to use it in that environment. Oh well, such is a Hams choices!!

Thanks again for the info. I have somne rotor cable laying around and I'll try it and see what happens.

How did my explanation brand me a coward according to you? Of course it did Noel no harm but I do think it was unncessary in my case. All I did was to explain why I used the term "yokel" and you retaliate in a vicious way. Unless I get an apolgy I shall therefore make you a special project of mine, knucklehead, and eat your lunch on this esteemed board of intellectuals. I don't want an apology by e-mail but posted right here.
Furthermore you know damn well what I meant by the generic "Saturday Night Special" but chose to make hay with it. I find you disgusting and revolting and your love for guns is probabaly predicated on the fact that you come from a band of lawless halfwits who've spent most of their adult lives behind bars and I'm not talking about "Cheers" either. You go ahead like a good little boy and post that apology now or else you'll regret having ticked me off.

If your planning on a 811 amp I highly recommend the 811H. I have had
one for years and it is a fine amp. No blower racket, easy to tune and
the tubes are cheap. 800 is all you need.

And yes indeed the ps could be the cause of this whole problem. But
since it drops out and thus does the output it will be hard to prove
until you add a amp that does not use that ps. It could also be a
combination of all of the above. Have fun !

Then let's use your twisted logic and ban everything that has the *potential*
for being used as a weapon. That would include baseball bats, glass bottles and
even playing cards. (I saw a guy throw one and stick it one inch into a
two-by-four. Imagine if that were a person!)

From the posts I have been reading, this forum is being turned into a gun control forum by a misquided gadfly in Clifton N. J.

Lets at least keep it confined to amateur radio. I don't think it should be platform for a non hunting, bleeding heart liberal, trouble maker who doesn't know one end of a gun from the other.

The simplest receiver is a diode detector. Originally known as a crystal set. Requires no batteries or transistors or tubes. Only receives AM. See any tutorial on receivers for diagrams; it's so simple it doesn't take much at all.

On the other hand, if you want control over bandwidth, or want to receive other types of modulation, better sensitivity, more audio output, and so on, you have to add cirrcuitry and the cost climbs.

I particularly note (d), which implements a desire for all aspects of interest
in amateur radio, whether it be from the operating, technical or electronics
experimentation angle. The FCC not only recognizes diversity in the hobby, but
encourages it.

So? That simply means that the VEC's are closed on the weekends, and that these were probably ULS-directly-submitted changes (renewals or address changes).

Remember that Friday's submissions are posted on Saturday (and available for download on Sunday), but since the VEC's are closed, there are no Sunday postings (to be downloaded on Monday).

You STILL don't understand the point. You were not interested in doing well on the test. You were not interested in knowing as much about the material as possible. That is all I am trying to get across. I am ever so proud that after being licensed you were able to pick up a few more details. With any luck, you will continue to do so. It is just appalling that anyone would deliberately shoot for the bottom of the barrel. I'm just paraphrasing your original comments. How now can you pretend to disown your own work?

I have a few questions regarding the TK-270.
I need some definitions for the following from the programming
manuals...

1) Signaling, And/Or
-squelch opens when BOTH match
-squelch opens when EITHER match
What does this mean?

2) Digit time

3) Inter Digit time

4) First Digit time

5) Rise Time

6) Rise Time with QT

7) D Key Assignment

8) Auto Reset Time

9) Clock Freq. Shift

10) Trunking

Actually, I agree that we as hams need to be more ready to
change. While he may be too harsh, I disagree on the following.
I'm a ham and want change. I don't mind if a scanner user
becomes a ham.

Beyond the bickering, there is a point. Now don't get me wrong.
Let's keep hope. Yet, everyone knows Ham radio is not as
advanced as many other technical hobbies.

Remember, to each his own. If you're happy with the status quo,
then God bless you.

So IMHO, we need innovation *AND* the rules to back it up. This
includes a revaluation of ecryption and further innovation where
two said mutually exclusive benifits can be made to work
together. For example have (at least a level of) encryption and
still keep business out.

What can we do about it??????????????????

Some gun stats you don't hear very much about. They'll probably drive ol doc to delusional blabbering but here they are.

1. Far more kids kill themselves with bicycles than guns.

2. Only 2% of guns purchased at a gun show are used in crimes. Most of them were purchased legally at the time.

3. The majority of sales at gun shows are by commercial dealers - who follow the same check rules as in their gun shops.

4. Guns are used for self defense at least 2 million times a year. - 3 to 5 times more than for crimes.

5. The nine states with the lowest violent crime rates ALL have right to carry laws.

Actually, if we let the government take our guns, what's next? Ham bands? Just like New Zealand and Australia. If they take away the Constitutional right to keep and bear arms, what right is next? Maybe you do not care about that right, but what right do you care about? If they can take away one, they can take away more and something you will care about....but then it will be too late. Indeed, gun ownership and your ability to communicate with ham radio have a lot in common. You just have not seen it yet.

Hi Dan (and lurkers),

You bring back old memories. I got started in ham radio in a place where a lot of the kids had way less than I did, and I didn't have all that much. But one of the fellows who got his license when I got mine did quite well with some home-made equipment. He talked (on CW) 3000 miles across the country with a very simple transmitter and receiver. The receiver was a regenerative set with one or two tubes. We used to get parts from scrapped TV sets and radios. You can do the same sort of thing now with transistors. I'd be surprised if you couldn't get all the parts you need for free. If you were nearby, I'd gladly give you old boards with plenty of parts to do everything you need, except perhaps tuning capacitors, but hey, I'd even throw in something you could use for that if you were serious. I'll bet you can find 'lectronics 'sperimenters and the like in your area that will give you all sorts of stuff.

I've listened to broadcast stations from about 1000 miles away at night with a "crystal set." OK, I cheat: my "crystal" is a semiconductor diode, and I follow that with a simple audio amplifier. But you can learn a lot from something so simple: you can learn about tuned circuits and how to make high Q coils to keep losses low but still reject local stations.

There are web sites with all sorts of simple receiver ideas. I'm sure others will post some pointers for you, or you can just do a web search.

Cheers,
Tom

Daniel,
That depends on what you may have in your 'junk-box'.
It's possible to build a very simple reciever for zero
dollars, and then again, it can cost a lot more than
buying a new one.
If your very close to a broadcast station, a diode
and a set of earphones will/can receive it....
'Doc

> Guard rescue a group of teachers adrift in the Pacific.

Now if we could only get those ham operators, or other ham operators
in general, to join the Coast Guard Auxiliary, they could have contacted
the Coast Guard directly using their radio (on Coast Guard frequencies).

The Coast Guard Auxiliary is actively seeking volunteer civilian radio
operators, or any other US citizen, to assist with its missions. Boat
ownership is not a requirement (there are plenty of other missions -
public education, radio watch standing, etc.). All that is required is
a willingness to help.

If you're interested, please check out the Coast Guard Auxiliary web
site at...

http://www.uscg.mil/hq/g-o/cgaux/default.htm

Click on the "Coast Guard Auxiliary" link on the right (scroll down)
to find the local Flotilla in your area. The officers in that Flotilla
can answer any questions you might have and will start your membership process.

By the way, sorry to use your post for a membership appeal, Jeffrey.
But it seemed too good of an opportunity to pass up.

Dwight Stewart, SO-CS

Division Comm. Services Officer
U.S. Coast Guard Auxiliary

> Gov'mint workers? Ooooh, cheap shot ;-)

Lol. I like that, Jimmy. Yep, there were thousands of applications turned in, but only three actually got done. The FCC employees were on break the rest of the time.

Reminded me of the last time I went to vehicle registration. I had number 234, the clerks were helping number 72, and they all went on break. It wasn't funny at the time (the gun discussions in this group comes to mind), but now I laugh at the total laziness of those people. Nothing seems to get them to move fast (including more than a hundred unhappy people standing there giving them mean looks).

On the contrary, the Nocode Technician license has definately helped.
The loses of frequency we are talking about occurred before the Nocode
Technician license was instituted - and you know it.

>>though. Gentlemen don't do that.

>Sorry, but I'm not a gentleman when it comes to people spouting stupid
>bullshit.

Easy there, buddy. This is all in fun -- don't be so grouchy. It seems
I've found a weakness in some pro-Second folks' stance.

>>Devil's advocate mode on:
>>Again, either every possible weapon should be available to the

>There you go saying "should" again.

But Tim claims that weapons can't be blamed for killing so what do you
have to fear? If all possible weapons are available to all citizens,
everyone is on equal footing. Afterall, this is the basis of you arming
yourself in the first place.

>>citizens, or none should. Why draw an artificial line allowing just
>>handguns and rifles? Tim implies that guns can't be blamed for gun
>>deaths, so surely weapons don't cause deaths; we should be able to
>>own anything.

>Then let's use your twisted logic and ban everything that has the *potential*
>for being used as a weapon. That would include baseball bats, glass bottles and
>even playing cards. (I saw a guy throw one and stick it one inch into a
>two-by-four. Imagine if that were a person!)

You could lock yourself up in your home and hide from such "weapons."
Yet a projectile would still be able to find you.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 21st 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23-W1BOS/R and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Fax (414) 673-9746

Gun Confiscation is NOW in the California Reich
By Richard W. Stevens, Esq.

California’s attorney general is paying gun owners $230 to sell their fundamental rights. Once a whore sells her virtue, she cannot buy it back at any price. You can’t buy back lost rights at any price.

It was right out of the pages of a police state manual. First there was mandatory registration of certain named "assault weapons." Anyone who wanted to keep one of the named firearms must have owned it prior to June 1, 1989, and had to register it by March 30, 1992. Registration gave the state a list of owners.

The Attorney General’s Gotcha!

Many owners of the named firearms did not comply with the law, so Attorney General Dan Lundgren allowed persons to register them after the deadline. Fearing criminal penalties for possessing an illegal firearm, many owners reported their firearms under Lundren’s "amnesty" program.

In August 1998, however, a California appellate court held the Attorney General could not legally allow the gun owners to register their weapons after the March 1992 deadline. That ruling came after many owners had already identified themselves by registering late. The Attorney General had led the law- fearing lambs into a trap: citizens had voluntarily informed the state that they were felons.

Meanwhile, in May 1999, California Secretary of State Bill Lockyer offered to buy the liberty of California citizens. Paying a flat rate of $230 per trick, the state would "buy back" any SKS Sporter semi-automatic rifle (with a "detachable magazine") that was purchased by its owner between 1992 and 1997. The Governor signed a bill in September 1998 which protected the owners from being prosecuted ... if they turned in the SKS weapons. Call this "confiscation light."

Then California lawmakers passed SB 23. On January 1, 2000, any Californian who possesses a magazine-fed centerfire rifle or carbine may be guilty of a felony. The 1989 law banned weapons only by their names -- the 1999 law bans all such firearms by their features (e.g. pistol grip, thumbhole stock, flash

suppressor).

Registration Begets Confiscation

The California Department of Justice has already prepared the confiscation letter. Guess who will get the letter? The form letter itself says it will go to those citizens who were listed in "the Department of Justice's assault weapon registration file." The people who registered during the previous Attorney General's "amnesty" are on the list.

The Internet news service, WorldNetDaily, obtained unreleased copies of the confiscation letter. To the registered gun owners, the letter reads: "If you possess a prohibited assault weapon ... but you did not register the weapon until after March 30, 1992, you may be subject to criminal prosecution. You are advised to relinquish the assault weapon to a police or sheriff's office..."

Compensation for owners? None. The state's plan is to give the gun owners 90 days to turn in their semiautomatic rifles -- and get nothing.

Learn the Enemy Strategy

Firearms makers and owners must learn to spot the enemy strategy instantly. Here is how it works:

(1) Identify a certain limited class of guns by name, design style or appearance. Give them a wicked name (e.g. Saturday Night Special, "assault weapon," machine gun, etc.)

(2) Register the owners of the limited class of guns.

(3) Expand the limited class of guns that must be registered.

(4) Permit current owners of newly-regulated guns to "escape" legal trouble by registering promptly.

(5) Declare some of the "limited" class of guns illegal, but offer to pay the owners to make it look "fair."

(6) Confiscate all of the "limited" class of guns, without compensation, to "close the loophole" in the gun law. Use the registration list to send letters first, and government agents next.

This procedure mimics that of the Nazi German anti-Jewish laws. First the laws were limited in scope and application. People tried to obey the laws, thinking that the laws would not get worse. Soon the laws expanded and became more severe. Still the people kept trying to adapt to avoid punishment. Eventually the laws mandated the "final solution" to "close the loopholes" through which many Jews were managing to survive despite the Nazi's legal oppression.

You just saw registration lead to confiscation this year in America's most populous state. Now will you fight back?

May 20 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

May 21 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

May 28 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JUNE 2000

Jun 4 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: AL Erbrederis, tel. 1-815-498-9675, 262 Easy St., Somanauk IL.60552. ERB.N9PIB@juno.com. http://www.qsl.net/w9mks. E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 11 (Sun): Wheaton, IL - Six Meter Club of Chicago. http://cyberconnect.com/orion/smcc.html. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 630-963-4922 or 708-442-4961 . Email: wa9rij@mc.net

Jun 24 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jun 25 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JULY 2000

Jul 8 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info, call (414)762-3235.

Jul 9 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz. http://www.w9az.com. Admission $5. Info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. Tel: 815-939-7548. Email: k9nr@juno.com

Jul 15 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jul 23 (Sun): Sugar Grove, IL - Fox River Radio League. Waubonsee Community College. Admission $5. http://www.frrl.org/hamfest.html Info: Maurice Schietecatte,

W9CEO, 813 Cindy Lane, Sandwich, IL 60548. Tel: 815-786-2860. Email: w9ceo@arrl.net (good, small to midsized ham-fest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email: jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $4.00 in advance with double stub, $5.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. 708-358-1786, email: christine1@mediaone.net. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: Gary Denison, KA9SKS, 14704 East 2750 North Road, Danville, IL 61834-5610. Tel: 217-759-7389 . Email: gdenison@danville.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. Info: Ron Morgan, KB9NW, or John Coker, N9FAM, both c/o: PO Box 3508, Peoria, IL 61612-3508. tel: (309)692-3378. Email kb9nw@juno.com or n9fam@juno.com. http://www.peoriasuperfest.com

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds.

http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & Computer Expo. Allen County Amateur Radio Technical Society. 2000 Indiana ARRL State Convention. Allen County War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5

admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

Anyone familiar with the Dayton area know of or can recommend a _decent_ nightclub (say oldies rock and current top 40 etc) for some after the hamfest relaxing ? The evenings are kind of boring, I'm a night owl anyway and it sounds good to toss back a few Diet Cokes (I'm diabetic) and watch/meet some Dayton Dancin' girls :) .. Kindly skip the Gay/Biker/Country-Western/Dirt-Floor type establishments, just not my cup of tea.

TIA & see ya there ...

Anyone that believes for an instant that there is ever
a guarantee that spectrum will not be coveted
by other entities is an idiot. The political winds
can change in aheartbeat and the only thing to
do is stay vigilant and do our best to show that we,
as hams, are making good use of what we have been
given. That means there is NO one answer to
offer up as a means of defending our spectrum.
There must be a cohesive and multifaceted set
of reasons to do so.

Cheers,
Bill K2UNK

Your making the decision to not get a license is the best thing that
could happen to ham radio.

4468. Ham Radio Operators Help Rescue Boat

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8fqot9$ip2$1@news.hawaii.edu>
Source record: 111050

From Sunday's Honolulu-Advertiser newspaper:

HAM RADIO OPERATORS HELP RESCUE BOAT

Ham radio operators on the island of Hawaii and on Fanning Island in the Republic of Kiribati worked together last week to help the Coast Guard rescue a group of teachers adrift in the Pacific.

The five Fanning Island teachers were aboard a 36-foot outrigger canoe on a day-long fishing trip Wednesday when the canoe's engine failed, said Lt. Michael Wessel of the Coast Guard Rescue Coordination Center in Hawaii.

Fanning Island is about 1,000 miles southeast of Hawaii and a few hundred miles northwest of Easter Island.

A relative reported the missing boat to a ham operator on Fanning Island who, in turn, reported it to a ham operator on the island of Hawaii. The Hawaii operator reported the missing canoe to the Coast Guard at 5 p.m. Thursday.

After coordinating with the U.S. embassy in the Republic of Kiribati to assure fuel would be available on Easter Island, the Coast Guard dispatched a C-130 from Oahu at 5 a.m. Friday. The airplane arrived in the area at 9 a.m. and found the boat at noon.

The aircraft crew dropped food and water to the teachers, as well as a radio and beacon. They then contacted the coastal freighter Matangare on Washington Island in Kiribati. The freighter rescued the crew and salvaged the boat Saturday.

Well then why will my CB radio not get further than 2 miles?
Perhaps there are not as many hams.

Just a thought with all the interest in computers why are my news
groups shrinkging I just deleted 20 more news groups where no one
posts.

I hate those absurd and realistic "motivation" sayings.

> In a word we need to
> spearhead wireless broadband! In addition we need to stand
> together in order to restructure the FCC rules for it.

I don't agree. Putting all eggs in one basket, wireless broadband or not is not the answer. I see this sort of tunnel vision as no different from the "Morse Code or Nothing" syndrome. On the other hand, there is nothing wrong with updating the regulations and bandplans to accomodate these activities in a compatible way.

What Amateur Radio needs is an environment where Amateurs are accepted for what THEY want to do, not because it suits the fetish of one of more groups of indivisuals. The biggest problem that the hobby faces is its own members! There is one group saying that anyone who doesn't know Morse to my standard; or pass the same exam as I did, are knuckle dragging apes, now there is the "If you aren't into broadband, you are a fossil, holding it back".

Prospective Amateurs who listen to or read what Amateurs say about themselves have more than enough reasons to question whether it is a hobby to worth getting into. There was some young fellow in a recent post blowing off a lot of hot air about that fact that Amateurs like to talk, but not to listen. Although he was an angry little ant, there was a kernel of truth buried in the volumes of waffle. As a group, we seem to be more interested in making sure that everyone else is made to like what we like, and resisting the efforts of others to make us like what they like. The bands are large enough for everyone to what they want. Even natur recognises that survival depends on diversity, not mono-culture.

To bastardise a quote "We have met the enemy, and they are us".

wrote:

>I don't think it comes under "perception". The public only has to
>read this newsgroup to find out about ham radio....

I came to this newsgroup to read about ham radio (as I'm trying to get back into the hobby) and found a shred of real ham information buried by political posturing and personal attacks. Basically this entire newsgroup is OT. Grow the f*** up folks! I can't believe that a rec.* group, with much more stringent creation criteria than an alt.* group, is a trashheap compared to the alt.ham-radio.* groups! The climate there is civil and friendly, if more sparse than this group, but the S/N ratio is nothing there compared to here...

Rant aside, I very much enjoyed hamming in the 70s-80s and now would like to rejoin the hobby, and am learning what's new past the restructuring (which I just found out about); arrl.org has basically so much info, someone else has mentioned on-line practice testing, anyone have info where that might be; and how to incorporate my Yaesu FT-101EX into a "new millennium"-type of shack, what else I'd need to really be able to operate well, etc. (I am now in my own house rather than my parents', so I can put up whatever I damn well please :-))

So is there anyone out there who is willing to post on a mature level and perhaps help out a guy who just wants to get some real ham discourse going? I have a lot to learn (or re-learn) as all I did was HF CW under my Novice ticket, so any advice (past "piss off and die") would be appreciated.

>maker who doesn't know one end of a gun from the other.

Your own words above are in themselves inflammatory and offensive - if you want to keep this group on amateur radio, fine, then please keep your non-ham-radio opinions to yourself and be the one to stop fanning the flames, how about?

Someone in another group mentioned on-line practice tests for ham license, is there any info on this, a URL? Thanks in advance.

i passed the general, advanced, and extra tests by only studying the question pools. i was disappointed in the quality of many of the questions, and have sent comments to arrl-vec about them.

because of the freedom of information laws and the need for standard question pools, studying for the test from the pools will always happen. this is not necessarily bad, though.

the 10-1 ratio of pool questions to test questions requires an examinee to do a lot of reading and if the questions are geared toward 'learning from your mistakes' rather than a memorization of formulae we can educate while we test.

Now you resort to name calling? Who's retarded? Me, or someone who is proud of the fact that they are lazy and just want to get by? Can't get past your original point, no matter what you say or who you say it to. You just want to get by with the bare minimum. Next time you have to take a driving test, call ahead and find out how many questions you can miss and still get a license. People like you are a danger to the rest of us.

Ah, yes, big difference.. lets lower the requirements to can you
drool your name across the signature bar code line.

>
> Step 3: Two code elements, 13 wpm for General and 20 wpm for Extra.

Never happen! If anything the 5 wpm requirement is a token that will
be easy to simply do away with in a decade or so.

> Step 4: No-code license should be one year non-renewable.

All licenses should be sign your name on dotted line.

> Step 5: Remove negative influences by disbanding the ARRL.
>
> wouff hong
>

I'm quite certain ARRL wasn't promoting a 5wpm Universal HF license,
but they simply realized the FCC was not convinced code was a viable
examination requirement for HF.
Where in commericial radio is morse required or even used, except
perhpas as a beacon?

As I remember Phil Karn introduced TCP/IP for amateur radio at one of
long gone Mid-Atlantic Packet Radio Council meetings.... (the one held
in Savage, MD). I can't put a year on it. But at the time the TNC-2 was
rumored but not yet a reality.

It was an amateur radio adaptation of the existing TCP/IP. Just as AX.25
was
an amateur radio utilization of the existing X.25 transfer protocol.

However, I think Phil did a lot of development for TCP/IP in his job
(memory wants to say that he worked for Bell but I may be wrong)

If I root around in the attic I might be able to find the diskette
he gave out that day.

But going on from here....
While packet radio was what we could call a "reverse" development in
amateur radio, meaning something we adapted, it sure did open the door
for commercial development of mobile data services.

Just answer the question. How Will Registration and Licensing reduce Crime??

Come on liberal dipshit let's here it. LOL
NO Answer - HUH

Tossing profanity at anyone on the Internet is a violation of terms of ISP
service but I'll not report it to AOL. Answering him is out and so is
locking him out of my mailbox. I'll simply make my argument public.

It's a sad state of affairs in America when a person is for better gun
control and becomes, because of it, the target of profanity but isn't that
the usual modus operandi of an NRA rightwing stooge? It simply is the
mindset of those who follow the likes of Tom DeLay, Trent Lott, Dennis
Hasert and other top Republican meatheads who'd sell their souls for a vote.
Who'd jeapordize the health and wealth and every American thanks to some
bucks slipped under the table by Heston, LaPierre and their lackeys. Hell,
even George W. is for safety measures which surprises me since I didn't
think he had any idea there was a problem. Duh.

This Tim Volz is some character. Until now, I thought he was a friend whom I
supported in many arguments on this board. For weeks I've been getting his
e-mails telling me about a nutty rightwing Jewish orgnaization in Wisconsin
that loves guns and he expected me to buy such a dopey thesis. In society
we'll always find lunatic fringe groups who speak for no one but themselves
and Tim tried to convince me that they should speak for me. It's as crazy as
a religious group in the Vatican calling themselves, "Cardinals for

Pornography."

Sorry but there's no reason to use filthy language on the Internet just because it's supposedly unguarded. A decent give and take is always welcomed by me but not the type of e-mail just received from KK7HO. It serves to prove that he's as low class as those 3.950ers he chides. What a hypocrite he is!

That field has been being discovered on and off since the 20s. Now dig out your atlas and draw some pipelines across places you don't want to be near to ports that don't exist. If you can do it for under $30 a barrel, OPEC is in deep doodoo. Unfortunately, not until then.

Dick

Do not read your own opinions into what I wrote. If someone
wants to do only CW with "a paddle boat swing" or whatever, then
more power to them. Just do not stand in the way of innovation
doing it. My point is to intergrate both. Don't be afaid of that
change.

Thank you for the compliment that we can motivate and encourage
each other.

I did not say only wireless broadband. Yet, if you've been
keeping up you would know once you have broadband a whole world
of options are opend up to us.

You say.....

>To bastardise a quote "We have met the enemy, and they are us".
>
I say lets work together as hams not afraid of change. I suggest
us older folks leave a legacy that the younger folks can be
proud of. If nothing else, we must clear the way for innovation.
Today, most of the innovators just go where they can invent
without old out dated restrictions. Saddly away from Ham Radio.

Wirless broadband is the way of the future IMHO. It would be
nice if us supposed wirless experts would take us their.

Just look at cellular. Look haw they've take our ideas, applied
them with their own rules and now beat the pants off us (mostly)
for every day communications (except for the price charged).

To anyone who's ever communicated with the skies via Ham Radio,

We are an Internet TV channel called spacewatch.com, and are currently in the process of making a show about how astronauts often communicate with others via Ham Radio. If there is anyone out there who has any experience with this, or knows anything about it, and would be available for interview, please e-mail me at ciara@spacewatch.com. I would be delighted to talk to anyone with any knowledge of this topic. At the moment the show is merely in the research stages, so any information at all would be appreciated.

Yours,
Ciara.

I don't see that the FCC paid any "special attention" to (b), (c) and (d). If there is any emphasis to be inferred from reading that rule, it may be that the value of emergency communications is listed first. Paragraphs (c) and (d) give equal emphasis to the operating and the technical.

Most amateurs do not contribute to the Service equally in the operating and technical arenas, nor is it necessary that they do. Collectively, the Service meets its objectives, which I assume is quite acceptable to those who write the rules. IMHO, any change that kept "only" those with a technical interest in the Amateur Radio Service would be a bad thing if it excluded those with operating (and emergency communications) interests.

CIRCUS BOY likes to feel smart by telling us one of the most
RUDIMENTARY of all ham radio facts!!!!!!!

Here are a few MORE things HORSEHEAD might ENLIGHTEN OUR INTELLIGENCE
with in the next few weeks:

1. DON'T hold the HOT end of a soldering iron.
2. Bill Clinton is the president of the USA.
3. Grass is green.
4. Fish exist in water.
5. The 'ole GOAT is on her DEATHBED.

Go check the 'ole GOATS COLOSTOMY bag now, ELEPHANT BOY hohohoho.

Odd thing is. is that he _can't_ argue.

He makes an uneducated statement that most, if not all folks disagree with, then when he gets a response, he retorts with childish insults saying something about how stupid you are. If you ask him a question on _why_ he posts the original post, or _what_ the original post actually means, he then disintegrates (or hides).

Also, like a child, he will use simple diversionary tactics. Whenever he feels he needs to respond in an intelligent manner, he will nitpick on spelling, cussing, etc. and avoid the whole issue by re-focusing attention and making a big commotion out of any irrelevant thing he can grasp for.

He ought to run for President. I don't think we'd even notice the difference! =)

I second that. It's a joke, really.

Also, the laws in effect aren't even used, or they are abused.
"More laws" is not the answer. Less law-abiding citizen rights
is not the answer.

Anytime Jammer. When are you going to play your "digital recordings" on
frequency again?

> Again thanks and when I hear you sounding drunk and stoned on
> 14.313 I wont say a word.

Well, STUPID, 1)I don't drink or do drugs. 2) I haven't been on the HF
radio since the middle of April, and can back that statement up. 3)
Prove it was me or shut up.

>I would love to meet you sometime you sound
> so wonderful I could have you squealing like a pig in a few minutes
>you big lug

I don't think so, you druggie. You haven't the nerve to meet me, even
though I have no desire to do so. I don't approve of your "lifestyle,"
but if you want to poke rumps that's your business. Are you going to
bring your "weed" on your vacation trip to NC? I hope so, maybe some
friends can alert the state police up and down the East Coast, and they
can explain why it's against the law.

From: euphonic@mediawar.com
Message-ID: <3922fa73.26046247@news.xs4all.nl>
Source record: 110843

http://www.euphonicradio.com
(please forward to those interested)

*A new radiostation without boundaries is born. Dj Hector Heclectic (Gideon Hofland) presents in cooperation with mediawar.com and Tree-Top.com webradio by the name Euphonic. A non-format station with an hour of radio every week in the do-it-yourself tradition. Fresh and settled music, interviews, sound journeys, poetry and other human outings. Hopefully with help of the listeners, who are asked to send their demo's of yet to be discovered bands, MP3's of homemade work,
poems and sketches.

http://www.euphonicradio.com
(please forward to those interested)

*Every programme of Euphonic is different. A musical mix by a dj, the next time interviews only and a combination the following week.We have thought of the international character of the internet
also. Depending on the language of the items and the music, the presentationis in English or Dutch. When it's the newest music or a mix then it's all English.With Dutch cabaret, interviews or satire, all will be in Dutch. The text next to programme explains the content and the language used in that hour of Euphonic radio. Coming specials are about sounds and music of South Africa and Three Days of Dutch Dance, a musicfestival in Amersfoort (the Netherlands).

*With thanx to internetlabel http://www.tree-top.com , for custom made
CD's with good music.
And http://www.mediawar.com ; design, music and cartoons
Thank you for your attention!

4514. Re: AF2Y: Just anwer the question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-17 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8fuvcbntn1@nntp9.atl.mindspring.net>
Source record: 110846

I will try to "anwer" the question.
Registration and licensing guns would act as a deterrent to their ILLEGAL uses. For instance John Smith wants to do away with Bill Jones. So Smith walks into a gun show, plops down a couple of hundred dollars and walks out with a concealed weapon. If and when Smith shoots Jones, wouldn't it be easier to track down Smith if proper papers had been filled out at the time of purchase? Then again, wouldn't Smith think twice about shooting Jones thanks to registration and licensing? But you gun lovers are too damn stupid to realize that registration and licensing has nothing to do with confiscation. No one's talking about taking away your weapons. I'm against it because it violates our 2nd Amendment Right. Question: if you're so interested in preserving your rights, then why has there not been a protest march around the FCC building in D.C. dealing with the infringement of our freedom of speech right on ham radio? Huh? Just think about that one. You yell in ridiculous anticipation of Uncle Sam taking away your guns yet you sit on your wussycans while Riley Holllingsworth takes away your tongues. Now don't get me wrong; I don't necessarily agree with that argument but it seems to be a predominate one, isn't it? Why for example don't you scream bloody muder when at age 18 every male in this country must REGISTER for selective service. What about violating some right in that instance? You're all a bunch of spoiled crybabies boo hooing over us concerned Americans who want to see crime REDUCED and there comes a time when any government must step in and take over when infants refuse or are unable to understand the untoward and destructive consequences of runaway gun love. You take a very serious problem in the USA and EXACERBATE it by trying to kill any legislation that will help brake it. You must be goddamned nuts or too stupid to see how you're being used by the NRA and dangerous rightwing militia groups in this nation. And some of you say, "I don't trust the government." You don't? Then move your asses OUT OF HERE. The majority of us LOVE this country which admittedly isn't perfect but name another than's better! Think about this one: has the federal government outlawed or confiscated cigarettes. Have agents raided and closed down tobacco companies? Of course not but what it has done is to make it more difficult for them to sell to minors and kill majors. How can anyone concerned about his nation and his fellow countrymen resent and defy measures that are designed to ensure the safety and general well being of us all? The only way resentment against common sense commences is because of brainwashing which is exactly what the NRA lobbyists are paid to do. These scumbags cleverly make you believe that it is un-American to have mandatory gun registration and licensing and you fall for it. What a shame that hams are dumb and are so eager to prove it on rec.radio.

Best to begin with the most simple and inexpensive arrangement
possible.

The most simple receiver is for the medium-wave AM band. All you need
is a coil wound on a toilet roll tube, a 350 pF variable capacitor, a
germanium diode and 150 feet of 20 gauge magnet wire. Half the wire
will be on the tuning coil and the other half ouside in your back
yard. Use your domestic metal cold water pipes as a ground
connection.

Because a pair of sensitive high impedance, 4000 ohms, headphones are
very expensive even if you knew where to get any (you cannot have
mine) you will need a single-chip, 200 mW, audio power amplifier and a
small, 2" 8 or 16 ohm loud speaker. Or a hearing aid insert.

Put a small soldering iron and reel of cored solder on your shopping
list.

When that job's done you will be well on the way to becoming a fully
fledged radio amateur.

Doc, you really lead a sheltered life? Registering guns will not
stop
anyone from committing a crime. People don't think of that when
they are
committing a crime. They all feel they can get away with it. Also
as a
police officer I can tell you that the majority of crimes with guns
are
not done with a registered weapon or one purchased legally. You
cannot
tell who murdered anyone without having the weapon. No weapon found
at
the scene then you have no idea who did the crime.

Doc read my lips. IF YOU OUTLAW GUNS THEN ONLY OUTLAWS WILL HAVE
GUNS.

You can try all you want to answer the question but your answer will
not be a logical one.

> OH, THAT MAKES ME FEEL REAL COMFORTABLE! WHERE DO THE CRIMINALS GET THE
> GUNS FROM
> IN THE FIRST PLACE, THE MANUFACTURERS?
>
Most of them are stolen. Many from manufacturers, others from private citizens, still others from police property rooms and large numbers are imported illegally. Cold barrels are stolen at the time of manufacture, before they are fired for ballistic records.

Prosecuting such thefts would go a long way toward curtailing the illegal flow of weapons destined for illegal use. Think about it...a criminal intent on committing a crime is rarely so stupid as to use his own weapon. And yet weapons crimes, thefts and other related weapons violations have not been proesecuted with any vigor since this administration took office. Weapons prosecutions are down 44%. Washington DC, with the most restrictive gun laws in the Nation, in 1998, only prosecuted 2 weapons violations. 2! According to BATF's own analysis.

Clinton recently said in an address, that 500,000 felons, fugitives, and stalkers have been prevented from purchasing a firearm by the Brady Bill, a law that mandates prosecution for the illegal ATTEMPT to purchase a firearm to be prosecuted as a felony. And yet, only a handful of such prosecutions. So either the President's figures were grossly exaggerated, or there simply is no interest in prosecution under the Brady Act. That's a huge loophole that could be closed immediately, with no additional legislation required.

Imagine taking half a million firearms felons off the streets at a stroke. The result in public safety would be immediate and dramatic. Now couple that with the figures showing that gun accidents, owing to improvement in education about gun safety, are down 88% over the last 20 years and you have a breathtakingly different picture of life in these United States.

The matter rests, as it has always rested, with the authorities. Not in hammering the law abiding citizen, but in doing their job against the criminal element. As the figures demonstrate.

> > 4. Guns are used for self defense at least 2 million times a year. - 3
> to 5
> > times more than for crimes.
>
> WELL, DOES THAT MEAN 2 MILLION ADDITIONAL DEAD AND WOUNDED PEOPLE? NICE
> TO KNOW

> ITS OK TO KILL IF IN YOUR MIND YOU ARE JUSTIFIED.
> THE JUDGE, JURY, EXECUTIONER THING...

Now THIS is scary thinking. In the matter of self defense, the presence of a firearm is the great equalizer. Statistics from the governments own BATF studies have shown that the presence of a gun in self defense is a deterrent, in more than half of such cases the weapon need not be fired. In a portion of cases, the weapon is fired but not on target. In all but a few unfortunate cases, no one dies, and few are injured in defense of home and property.

But if you're suggesting that there is something untoward about taking up a weapon in self defense, then there is something wrong with your thinking. Laws in all 50 states, and in fact, the most restrictive of societies world wide recognize the absolute right to use deadly force in self defense, where the threat of deadly force is made. Waiting for the police is a noble concept but not only imprudent, but foolhardy and dangerous. When threatened with death, no one on the planet is required to simply accept it.

> RATE,
> YOUR DATA PLEASE.

The figures are readily available from both federal and local police authorities, FBI, and BATF, and have been widely published since Florida enacted concealed carry with the HUGE angry protests that made the news. Violent crime and murder is down. Look it up. You'll be more likely to believe your own eyes, than anything printed by any one of us.

> easier to track down Smith if proper papers had been filled out at the time
> of purchase?

Hopelessly naive. First the presumption that owning a weapon means
that Smith will eventually shoot Jones is simply fallacious. More
than 99% of all weapons owned in this country will never be used in
a murderous assault, or fired at another human being. Secondly, if
Smith fills out registration papers, then there is virtually no
chance he's going to use his own weapon.

The government's own figures demonstrate time and again that
criminals use stolen weapons, or weapons acquired illegally to use
in the commission of a crime. In which case registration only serves
to create the necessary database of names of legal gun owners to be
contacted when their specific weapon is banned. Without exception
registration has resulted in confiscation. It happened in England
and Australia. It's happening now in South Africa, and Canada. It's
happening now in California.

And yet, criminals are creating more havoc, and committing more
crime with firearms in those places than ever. With illegally
acquired weapons.

So your premise is false, and your logic is flawed. Your
proposition will serve no purpose in the reduction of crime.

> Then again, wouldn't Smith think twice about shooting Jones
> thanks to registration and licensing? But you gun lovers are too damn
> stupid to realize that registration and licensing has nothing to do with

Again, you say no one is talking about it. But it HAS happened.
It IS happening. Without exception. No one is talking about it. But
that's the result...everytime. You seem to wish to ignore that
salient point.

> I'm against
> it because it violates our 2nd Amendment Right. Question: if you're so

\
Ham radio is a Privilege. Not a Right. That's why.

> Huh? Just think about that one.

Yes...think about it indeed.

Your answer is sooo ridiculous Doc. I will only say that if you think john smith is going to purchase a registered weapon to do away with someone your as nuts as you appear. It only hurts the "law abiding," the ones that should not have rights restricted by the actions of criminals.
JUST AS I THOUGHT - He DIDN"T ANSWER THE QUESTION.

From: LRod <lr0d@my-deja.com>
Message-ID: <8fv907$b0g$1@nnrp1.deja.com>
Source record: 110855

Back to radio topics, according to the Web Extra Member's Only page of the ARRL site, Riley Hollingsworth backed off on the IDing thing.

"Riley Hollingsworth: Is my face red? FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says he was just trying to see if the amateur community was paying attention when he suggested on his recent Radio Amateur Information Network enforcement news report (http://www.rainreport.com) that the use of phonetics during station identification was contrary to the amateur rules. "

"As Hollingsworth has since conceded, after being challenged from several quarters, the applicable FCC station ID rule--&#65533;97.119(b)(2)--specifically encourages "use of a standard phonetic alphabet as an aid for correct station identification" [emphasis added]. "I plead temporary insanity," Hollingsworth told the ARRL. "I was working too close to my antennas the evening before.""

W2MSK, you are trying to impart wisdom to a cinder block between two shoulders. KK7HO has been brainwashed, gridlocked, manipulated, steered and convinced by that damned NRA which gets richer with every gun related death. Their intent is to foster enough murder so as to entice EVERYONE to get a gun, legally or illegally. Heston and LaPierre thrive on murder and mayhem-they're bloodthirsty rightwing s.o.b.s who deserve to be thrown in jail. The situation is out of control thanks to them and theirs and by God the time has come to take back America by imparting intelligent decisions which aid us all instead of creating a nationwide Dodge City, 1850.

This KK7HO simply refuses to stay out of my mailbox and refuses to stop cursing me. Heck, I don't want to contact the AOL Gestapo which would be my last resort so if anyone can tell me how to get this brainwashed NRA puppet out of here, kindly send an e-mail and DON'T SWEAR. I mean like an occasional damn hurts no one but that's it. I don't mind some badinage with the dope on rec.radio but this getting personal is terrible. Keep in mind gentleman that e-mailing someone is like knocking on his door and when you visit someone, good manners is paramount. Or at least warner brothers.

Well, for the fun of it I built a small 80M CW receiver, transmitter, and telegraph key for about 10 bucks in the hardware store plus some minor parts scrounging. It is crude, but it works. One can do a lot if one scrounges and thinks a little about it, and is good at adapting the flotsam and jetsam of the electronics world to make the critter.

http://www.mindspring.com/~johnmb/na4g2.htm

Not necessarily recommended for contesting, but great for a little fun on 80M, in the evenings.

Good Luck, and have fun building.... that is a lot of the fun of Amateur Radio.....

Devil's advocate mode on:

The "Fundamental rights" you speak of only belong to the Second
Amendment Militia.

Title 10 USC Chapter 13 Section 311 defines the Militia as being
all able-bodied males of US citizenship between the ages of 17
and 44, inclusive. The Second Amendment does not apply to those males
outside of that age range.

You can't accept one part of the US Code (Second Amendment) but ignore
another (definition of Militia). All or nothing, Boys.

The US District Court of Texas thinks that the first clause, the
part about a 'well-regulated militia,' is a dependent clause which
is meant to show cause, not to restrict the right implicit in the
independent, second clause.

In other words, this issue is up in the air.

If you knew anything about what the framers of the constitution meant when they wrote the Second Amendment, you'd know why this regulation is an insult to all the patriots who died to preserve our liberty.

Most of the respected Constitutional Scholars, and numerous court decisions disagree with you.

In the language of the period, the term militia referred to a gathering of armed citizens for the purpose of defense of life, property, country. That means everybody. The Continental Army is not the reference.

Further the term 'regulated' the language of the period, meant equipped. So the intent of the framers of the Constitution, the authors of the Second Amendment is that the Citizens of the Republic should be armed, for the purposes of defense of life, property and country.

This intent is further supported by the language, "the right of the people to keep and bear arms shall not be infringed,.." with the term people not limited by age, sex or politics. Still further the right is not granted by the Second Amendment, it is protected. It shall not be infringed. That means, it is a pre existing right. Self evident, in the terms of the document, that is protected by the Second Amendment, in that it may not be challenged, limited nor amended. It shall not be in fringed.

Yes...all or nothing. It's there on the parchment. In black and a somewhat yellowed white.

It's not a question of would but has. Licensing and registration are not new ideas, they have been tried by various cities for decades and failed. The city with the most draconian gun laws is Washington D.C. It also has the highest crime rate by far.

From what I can tell, this is offshore in the north end of the Caspian which
is claimed by virtually everybody that borders on the rapidly-shrinking
Caspian. Given that every hole for miles of the Caspian leaks oil it is not
a huge secret that there is oil under it.

As you point out, the old SovUn never did diddly with that area and few
pipes exist. If they did or one planned to build them West they would go
thru territory of less-than-desirable political stability to ports that I am
not sure can handle 250k deadweight ton tankers thru a Med that few want to
see become another Persian Gulf.

Maybe Iran will let us use Kargh Island :=)

More meaningful would be a distribution.
An "average" age of 40 might reflect lots of old hams and lots of young hams in the military - with very little in between. A distribution would show how many hams by each age range.

Just what part of "militia" don't you understand? Even the writers
of the Second knew repeating the same noun in a single sentence
wasn't considered good grammar. Then, "Militia" = "the people."
Today, we define the "Militia" in more exacting terms as per
10 USC 13.

If you're over 44 years old, you're out of the Militia. Got to face
old age, Tom.

The FCC files or some derivative is probably your best source but do it quickly. Date of Birth as a secondary identifier is being replaced with SS#. Given that the active are more likely to be upgrading, it is a fair bet that DOB will rapidly become useless.

I'll disagree with the notion that there is no evedence that
the percentage is declining, while agreeing the Internet has little of
nothing to due with that decline. Indeed I suspect the interest esp
may well be helping some what to minimize that decline. Few student
even realy know we exist, Know that you can get ANY license without
Code Testing if they have heard of us at all. etc

>the operator, or those around him.

RF emissions rules to take them as an example are a matter of
Safety, not merely to Ham himself, but to memebr of the public as
large same as a major change in driving a Car. Restesting is a way of
dealoling with this. A better way still would renewals testing that
focuses on Rules related, or safety related issues, but that might be
too cumbersome to introduce.

Vital to our hobby? Not really. But not a bad one, in addtion
it would tend to give us and the FCC a real picture of our numbers, by
seeing that those whoe migh not be active but keep renewing just
incase are sweep out. Of course that sort of pruning might be bad for
us the percentage of inactive Hams is as high as some like to
speculate

Interesting; I'll have to research your claim.

It's odd, though, you claim that breakins don't happen in
Hawai'i. Your vote on gun control and mine can be at opposite ends
due to local conditions.

This is a case in point why the US doesn't need Federal Intervention
into private affairs. Why should a vote _against_ gun ownership coming
from Hawai'i weigh toward a completely different part of the
globe...Kansas, NY, CA, etc? Especially when the two very diverse areas
may have completely unassociated local [crime] issues?

If I live in Florida, for example, and there is a crime where I use
deadly force to preserve [law abiding] life and/or property, then any
investigation should be taking place at the local level, and if there
is a question, then a local court will pass a ruling. Otherwise, the
FEDERAL level shouldn't even be in the picture, much less a vote from
Hawai'i.

Not trying to pick a fight, just discussing a scenario that needs to
be examined.

Doc has a vote; he just can't seem to answer as to why....scary, really!

Message-ID: <8ftqdc$59k$1@slb7.atl.mindspring.net>
Source record: 110908

The Buckmaster database contains date of birth on many hams. A sample of a hundred or more randomly selected calls should give you a fair idea of the average and the distribution.

Good luck,

Bill

> Just what part of "militia" don't you understand? Even the writers
> of the Second knew repeating the same noun in a single sentence
> wasn't considered good grammar. Then, "Militia" = "the people."

Uhhh...no. In matters of law, grammar is not a consideration.
Specificity is. Alternative language is specifically defined, not
implied. Where the term 'the people' is used in the document, it is
defined as the Citizens of the Republic. Reread the document, you'll
find numerous examples of repetitive usage, and defined alternative
language.

"The People" means The People. Militia in the usage of the day,
means the assembled body of the people for defense of life, property
and Country, armed and equipped for defense.

> Today, we define the "Militia" in more exacting terms as per
> 10 USC 13.

Today we define the word "bad" to mean outstandingly good, too. We
are not speaking of the vernacular, or the connotations of the
moment, but the definition of the language as written. That means
what the word mean when they were laid down on the page.

Someone sed:

64 Yrs (and growing older)

Watch the SK pages in QST. They get longer every few months...

Hams between 15-27 Yrs = 1.3%
==========

Butr I don't think we're "dying on the vine".

A couple of years after the famous no-code tech license came along, ARRL published the fact that there were _____ new hams. The interesting part was that the average age of new hams was 44 years!.

It should have been 14 years!

But the point is that all these "new" hams surely have a FEW gud yrs left. :-)

But, like any other hobby, there has to be an influx of new hams.

On the bright side, as we all begin to die off...less QRM!

I started building ham gear last year so I'm kind of where your at experience wise. However I've had some time to look and see what is out there.

I just built the Ten-Tec 1253 9 band receiver last month. It cost $59.00 (+ s.h.). Its a regeny but it works pretty well. The selectivity leaves something to be desired but..... I built it to use while I got my tube based superhet built.

The gear I build uses tubes for two reasons. One, I got a lot of them that I collected as a kid that were still in a box in my folk's basement (after 25 years). And because they're so damn neat.

If your on a limited budget like I am, tubes can be the way to go. The superhet that I'm building is costing me only a few dollars, mostly for the transformers. I got most of the parts that I needed from some old junk tube radios that I got for a buck from a second hand shop.

If your looking for something fairly easy to build without a lot of cost, look into the kits offered by Ten Tec, Ramsey, and others. Kits are a good mix of cost, perfomance, and simple construction trade offs.

If your interest, e-mail me and I'll point you in some directions to start (may not be the right direction but still..). Good luck

Rick KC0GIX

Oh, a challenge! I'll bet I can receive FM on one... Of course, I DO
need to add some tuned circuits, or at least one tuned circuit. But
for sure there's no reason I couldn't build a ratio detector with just
diodes and tuned circuits, tuned directly to an FM station. And slope
detection is even simpler. Stereo might be a bit tough, though. ;-)

Cheers,
Tom

Alinco radios come with directions for hooking to a Kenwood or Yaseu
automatic tuner. BUT the Alinco web site says the edx-2 is for use
exclusively with the Alinco 70 or 77. I have had an edx-2 on my 77 for two
years. Remember it does NOT operate like an SGC.

Thanks to all who jumped in! The upgrade showded up Monday on
the FCC ULS data base. Glad that's taken care of. Also glad it's
the last test to take. I should have upgraded years ago. Now I
am only an Extra/lite ham but that's the way it goes. I never
have even gotten on the extra parts of the band and so never
used the /AE and still have not operated in the now available
extra parts of the band. My most favorate thing to do is work CW
in the novice parts of the band. Dont care how fast or slow I
just like working hams just getting into CW. I know the first CW
contact I made was a blast and just keep on doing it. 73 all and
again Thanks!

4586. AF2Y: Red Appreciation Day

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8g2721$o5n$1@slb6.atl.mindspring.net>
Source record: 110741

Gentlemen:
On June 22nd of this year, we will mark the 59th anniversary of the Nazi invasion of the Soviet Union which culminated in the glorious victory of our Russian comrades in arms.
Keep in mind that eight out of every German soldier killed in W.W.II was done in by a Russian and had those lousy fascist beasts not been so beautifully slaughtered, they would have accounted for God knows how many Yanks, Brits and Canucks killed and wounded?
The Cold War is over and guaranteed the last thing Prime Minister Putin and President Clinton want is a nuclear exchange. Communism is a dead issue and even Red China will now become Red White and Blue China thanks to intelligent economic minds in D.C. which see the advantage in giving her reduced tariffs. Taiwan? I liked her better when she was known as Formosa-it's sexier sounding. And incidentally did I ever tell you about my ex-neighbor Anna Goldberg who swore one of the Chinese offshore islands was filled with oriental Jews? The islands are known as Quemoy and Matsu and she thought it was Matzoh, no kidding.
Anyway June 22nd is coming and we hams should do something to commemorate the sacrifice of the Russian people, armed forces and partisans who died not only to save their own motherland but ours too. Keep in mind that after being suddenly attacked and decimated, Soviet forces not only drove the Hun out of their nation but all across eastern Europe until the scum were holed up in Naziland in which they were themselves decimated. That's quite a feat, both of them. And inhabitants of cities like Leningrad and Stalingrad, under deadly assault for years, lived on shoe leather and dead horses and even by cannibalism to survive and urinate on the corpses of dead Germans.
Providing band conditions are good, we hams should go out of our way to contact Russia to say thanks which is SPACEEBAW phonetically. And to emphasize how grateful we are to the sacrifices they made, let's add a BIG THANK YOU which is BOLSHOYA SPACEEBAW. Tell them your name in Russian. Say MOYA EEMEYA... name. It means, MY NAME IS..... Tell them what city and state you live in. Say MOY GRAD(my city) and give it in English. After the state say 'SAWNOYNYEE SHATTEE AMERIKEE which is United States of America. And after the QSO, end with SIMDESYAT TREE which means 73.
I suggest putting on something red while you're on the air that day. Like the socks worn by the Cincinnati and Boston baseball teams. Hell, why not put up a picture of Joe Stalin? Yes he was a murderous commie s.o.b but he was OUR murderous commie s.o.b. who galvanized a nation or else. Anyone unwilling to die in warfare for him and Mother Russia would disappear another way.
Hitler had it all his way until that fateful day of 6/22/41 and then Colonel Winter set in "und die deutschen Truppen zum Tod werden gefroren(the German troops froze to death). That plus constant Russian military pressure and AMERICAN AID destroyed 80% of Nazism. Thank God.

Interpret as you see fit. That's _YOUR_ business.

However, I didn't threaten _YOU_. I was making a point that
the criminals are the threat, and when they are too close
for comfort, then that changes things rather rapidly.

Changes things a bit, doesnt it? NOW you feel the heat.

It's UTTERLY AMAZING how QUICKLY you JUMP in front of a
"moving car" and then [imaginarily] "get hit" so you can
cry out: "Hit and run! I'm going to sue!"

I realize you want more control over everyone _ELSE_,
and you don't want the laws you bark out to affect _YOU_,
but that's called a crying shame.

Point I was trying to make, (which you twist and turn into
making the commenter look like a bad guy---your Modus Operandi,
and a favorite among those with no substance behind their
position) was that the criminal is going to go to the path of
least resistance. If you are so nonchalant about registration
and gun control, then how about if YOU make YOUR name and or
location known as a gun-control advocate? I was just OFFERING
MY ASSISTANCE TO HELP/OBLIGE YOU IN THIS EFFORT SO AS TO PROVE A
POINT BY NOT GIVING YOU AN EXCUSE TO HIDE BEHIND AS TO WHY YOU
SHOULDN'T.

Don't EVER try and put YOUR TWISTED WORDS in my mouth, you
CRETINOUS INGRATE!

REMEMBER: YOU made this information PUBLIC, NOT ME. It is
in the "public domain".

Go look it up.

YOU have MADE PUBLIC of YOUR feelings on the issue of guns.
Doesn't take an Einstein to put two and two together, AND all
this by YOUR OWN HAND.

If I was a schoolkid in the eighth grade doing a report on gun
control, this ng is FAIR GAME for INCLUSION because it is a
PUBLIC FORUM.

Initially, I was just trying to see how you thought your own
medicine tasted (as far as making your feelings public on what
you will/will not accept in your inbox) since you felt it was
just fine to insult me in MINE.

I have NEVER posted to ANY email account of yours. EVER.

I can't say the same for you, AND I have evidence to support
that. You have crossed more questionable lines with me than I
have with you.

I will NOT be threatened in this manner. I am not kidding.

PS My apologies to this ng for the tone here, but I am afraid
"Einstein" here needs to be spoon-fed EVERYTHING.

He could have gotten himself out of that bind by saying that he
meant non-standard phonetics. E.g., using "Whole Hole Eight Ate"
for WH8A certainly could be considered contrary to IDing properly.

He provided a lecture here for our state legislators and was well-
received. Then our newspaper uncovered some strong financial ties
between him and pro-gun lobbyists in some southern state; that
cast some doubt on his research "results." I'll look up the
newspaper article.

Apparently, Larry, you are not aware of the current happenings in amateur radio,
or of amateur radio regulations in general. Being you currently hold a higher class
of license (Advanced, according to the current database), more would be expected of you.

Your pathetic attempt at making a snide comment (below) is
NOT becoming or needed.

The two major VEC's in this country (ARRL & W5YI) have been overwhelmed with the sudden flood of upgrade requests starting on April 15, 2000. Try reading
this news item at: http://www.qrz.com/news/articles/000512.paperwork.html.

The VEC's have been working overtime & hired extra staff to meet the demand, but things are still slow.

Apparently you chose to uppgrade from Advanced to Extra the EASY way
& wait until the rules were changed to lessor code speed. With a little work you could have acheived the Full Extra (or Extra Plus) with 20 WPM morse code, but instead you waited for the rules to change to make it easy enough for you to get Extra with little or no effort. How long did you wait, Larry?

Years? Months? Weeks? Decades?

If you have waited this long, you can wait a few more weeks while the VEC's clear up the backlog and soon you will have your
Extra-Lite/Welfare Extra license. (regardless of your stupid-assed comments)

Remember, you & all the other Extra-lite/Welfare Extra applicants
had an alternative to get your REAL Extra BEFORE the April 15 rush,
but chose to wait. You've made your bed, now lay in it & stop whinning!

4591. Specail Event Logger - Freeware

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: Paul O'Kane EI5DI <okanep@iol.ie>
Message-ID: <3924155A.2E95@iol.ie>
Source record: 110787

17 May 2000

SDX V9.62 is a comprehensive HF DXpedition logger
which runs on a 386 or better, and has a typical
capacity of at least 10,000 QSOs.

SDX is not a contest logger - it does not track
points and multipliers. It's intended for the
majority of DXpedition and special event operations.
It supports SSB and CW operation on all 9 HF bands,
but does not support packet or computer networking.

SDX also offers real-time prefix checking, dupe
checking and beam headings. It supports Super Check
Partial, serial & parallel keying, rig control, PTT
and band outputs using standard files & interfaces.

SDX is freeware and unrestricted. SDXCHECK is the
associated post-event program to create ADIF logs
for integration with your station log.

SDX may be downloaded from www.ei5di.com, or direct
from www.ei5di.com/sd/sdx.zip (192 kb).

> 10 USC 13.

The Constitution, and Amendments, refer to "the people" many times, therefore "the people" is clearly defined by other usage in that document. In no other place is the militia linked to "the people," so it is safe to assume that the writers did not intend for them to be linked in the 2nd Amendment.

The militia, and "the people," are two separate enities, one a justification, the other defining who the right was reserved for. Of course, the writers did not mean for that to be the only justification for gun ownership. They knew fully well that "the people" used weapons to hunt food, and protect their families, since that was commonplace even back then. And, since it was comonplace, I'm sure they did not think it was necessary to include that as a specific justification for the right.

The "jargon and stuff" used during MARS activities is set by the Department of Defense, not by MARS operators. The reason it takes so long to transfer a message is because the military considers exact content transfer to be more important than speed, so there are lots of checks and rechecks for accuracy built into each exchange.

By the way, according to an article a few years ago in the Stars & Stripes, about 65 percent of MARS personnel are active-duty military personnel under the age of thirty.

4599. ICOM T8A Call Channels

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: KG4HMN <kg4hmn@arrl.net>
Message-ID: <83q7isohaf5pkq24tt7ht0hdrgp0p24goj@4ax.com>
Source record: 110795

I have an ICOM IC-T8A tribander that supports 1 call channel per band.
I am trying to find out what the call channels are for and how to use
them. The user's guide explains how to program them but not how use
them.

Another Ham told me that they were priority channels/memory locations
that were constantly scanned during memory scan mode (mem1, call
channels, mem2, call channels...) It doesn't appear to work this way.

After playing with it for a while, it looks like they are just special
memory locations for storing your favorite calling frequency. You can
activate the call channel for the current band by pressing the CALL
button while in VFO mode. But, if the radio is in memory scan mode
(which is where it is when I am not talking on it) you have to switch
to VFO mode and press the CALL button to pull up that frequency. It
would be easier to program the calling frequencies into a memory
location.

So, is it really that simple or do these call channels have a more
sophisticated function?

Thanks, and any help would be appreciated...

4602. Passed exam, now what ...

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: mrhuey@wizvax.wizvax.net
Message-ID: <W4+I5oJPMeaG090yn@wizvax.wizvax.net>
Source record: 110798

-----BEGIN PGP SIGNED MESSAGE-----

Well, that's a bit of an understatement but I passed the tech
exam last weekend, am awaiting the coveted FCC sheepskin and call
to be issued, bought some more books to carry on the studying for
an upgrade in a year or so, scheduled myself to drop by the local
ham club meeting next month and done some research and comparison
shopping for a radio to get started with.

I'm leaving on vacation next week and will buy the radio and
all the necessary appurtenances and spend some quality time getting
familiar with how to use all the features and gizmos.

It seems that after all this, making that first contact is going
to be a tad anti-climactic and leaves one wondering what they
should do next?

Did anybody else have a similiar feeling of a lack of direction
at the same point in the hobby? Obviously, I have a healthy enough
interest and desire to do the studying and get a license at my age.
Even seem to have a pretty decent outlook and plan for further
study and subsequent upgrading of my privileges, but am a little
concerned about that lack of knowing what to do next.

Comments, suggestions, hints, tips, tricks? Have at it, people!

The ARRL is diligently plowing through the paperwork mountain.

Their website reports they worked through April 19th receipts yesterday (5/17) and, sure enough, my update appeared on the FCC database this morning.

Thanks guys and gals in Newington.

Can anyone recommend a few useful repeaters for someone climbing the south side of Mt. Rainier? Any Park Service or other frequencies worth monitoring? Thanks for any leads,

Jonathan KB0TAX

I'm in the same boat! I just got my Tech. I passed just last
week. I think I'll go for a portable walkie talkie radio..
Radio Shack has a couple on sale at the moment. Kenwood has a
couple different dual-band models that look good also.. I don't
think there is a Kenwood dealer within 100 miles of my house
though.

Are the Radio Shack walkies any good? They sure are cheaper. I
am a believer in the "you get what you pay for" saying!

Actually, the best way to get rid of unwanted e-mails is make a
"killfile" so you can set your mail retrieval to not download
their posts. Outlook express allows it, although I know you have
a mac, so I don't know what mail reader you use, Doc.

4612. AF2Y has decided

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8g16lh$t3a$1@slb6.atl.mindspring.net>
Source record: 110808

I had to decide what to do about KK7HO's profanity entering my mailbox and I had to choose between:
1. self deletion
2. reporting it to AOL
3. answering
4. reporting it to the FBI, ATF and to Al Gore, our next president and inventor of the Internet

I have decided to put into action MindSpring's mail rules whereby he has been blocked but not in the true sense of the word. He'll think his garbage is showing up on my inbox but it won't be. As soon as it's launched and reaches me, it'll be instantly deleted and that's that. I hated to take such a drastic measure but this gun-loving NRA stooge will not leave me alone. As I wrote previously I don't object to contrary opinions either in my mailbox or on rec.radio but I do insist upon decent although not necessarily total puritan lingo. Volz's language is offensive; he's on AOL but I don't need it to fight my battles. I realize I'm controversial which may lead to an argument and once again I welcome any and all opinions be they pro or con, but there's no need to express oneself through terms relating to body parts, functions and sexually snide and revolting references.

Nuts and Volz...tell us something about your measly existence out there in the dunes. What do you do for a living besides polish and stroke gun barrels and pretend to be offended by the offensive slimeballs loose on 3.950 who guard their guns in order to begin the revolution on time? Tell us about your deep reverence for Charlton Heston and Wayne LaPierre who'd rather be famous than protect the lives of kids. Tell us about your militia idols who, under the guise of patriotism, are gun nuts to kill patriots. Let's read more of your stupid postings about your idea of a "mainstream" Jewish group that loves guns. You wouldn't know the difference between the mainstream and ultra rightwing if it jumped up and bit your nose. Tell us how wrong it was to see 750,000 mothers marching in Washington to protect their kids against the ever increasing gun violence in this nation. Tell us how much safer we'd all be if each of us owned at least one gun to blast our way to fame and fortune. Tell us how ill equipped are our police forces in every city in this country to tend to public safety and how all of us, well armed, must fend for ourselves in a country we can't trust. Tell us how gun crazed vigilantism is the answer to our health and welfare. Then after you're made a complete fool answering everything, see a psychiatrist but first make sure he has a gun either in his desk drawer or under the couch you'll be lying on.

Ron:
Check to see what repeaters are in your area first. If there is a lot of SSB 2m then you may want to consider an all-mode radio. I purchased several used 2m radios to get started (even a venerable old Kenwood TH21AT thumbwheel sw select HT unit for $40!..now my hamfest radio due to size) which I used to get going. A "mobile" unit w/up to 20+ watts is good to hit that distand repeater. As I live in the county, a standard HT rarely will hit the repeaters and intermod is a bear (pager site 5 mi away...HTs rarely have enough filtering to prevent intermod). The RS unit is made by Alinco IIRC, so the performance of my cheapie DJ190 should be similar. Good quality, but TANSTAAFL applies. I've got aKenwood 25 wt mobile/station unit driving a 4 ele. WaveHunter beam (mounted in the attic) which gives me around 120 mile range. Borrow an HT first and see how it works. YMMV. Check 440 & 220 also, lower traffic and quite fun!

4616. Re: ICOM T8A Call Channels

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: Rick McMillion <rick@k66.com>
Message-ID: <eO$h#SPw$GA.141@cpmsnbbsa06>
Source record: 110812

Call Channels are usually national, or even locally recognized simplex frequencies. They are channels where you would normally monitor, if you are not listening to your favorite repeater. National call channels would be 146.52, 446.000, and 52.525. You might ask around locally to see if there are any other local simplex channels used, and program those in as your calling channels. In years past, hams would use the national calling channels to find other hams when they are travelling through areas where they are unfamiliar with local repeaters. Also, hams have used the national calling channels to call for help when there is an emergency, and they are not in range of a repeater.

On the other hand, you could just program your favorite repeater into the calling channel for each band.

Several paths you might take.

If you have a scanner, program in a couple of the local repeaters and listen in. Pick up a radio for that band, or a dual/multi band and program the repeaters you seem to listen to the most and go for it.

Find a couple of local clubs and attend a few of their meetings. Field day is coming up, help out. Many club Field Day ops have VHF/UHF station. No one will turn down a strong back and weak mind to hang antennas. Sit in on a station, do the logging! I terrible at CW and I read the scrawl someone writes upside down and keep log. I love it and frees up tried ops for coffee/food. Who knows, you might get a mic shoved in your face while someone dupes for you, it happened to me. Also, there are several VHF contest comming up, see if you can sit in on a station. I was in a deed restricted city so I ran rover for a couple of years.

Attend a RACES/FEMA meeting, sort of a club meeting. Another is SkyWarn.

As for Radio Shack, their equipment was made by ICOM and or Uniden, I don't know if it still is but it is pretty good.

Basically, find your own nitch. Ham radio is a hobby of hobbies. RC, digital, SS, contesting, homebrewing, contesting, etc. You will find and pursue what you enjoy.

73's and welcome!!

Back then, the militia WAS ALL able bodied men, regardless of military status or background. Three separate Supreme Court decisions have reaffirmed that interpretation in the constitution over the years. Clinton/Gore now hope to pack the Court with enough left-wing wackos who will be willing to reverse those three earlier opinions, and declare that militia to be only the established U.S. military services and quasi-military agencies (FBI, DEA, INS, etc.)
